Chapter 1	Green and Sustainable Chemistry: An Introduction	1
	<i>James H. Clark</i>	
1.1	What is Green Chemistry?	1
1.2	Drivers for Change	3
1.2.1	Legislation	3
1.2.2	Elemental Sustainability	3
1.2.3	Renewable Resources	4
1.3	Biomass as a Chemical Feedstock	5
1.4	Major Initiatives Worldwide	8
1.5	Summary	9
	Acknowledgements	10
	References	10
Chapter 2	Tools for Facilitating More Sustainable Medicinal Chemistry	12
	<i>H. F. Sneddon</i>	
2.1	Introduction	12
2.2	Solvent Selection Guides	13
2.2.1	Solvent Guidance for Chromatography	19
2.2.2	Solvent Guidance for Principal Component Analysis (PCA) Viewers	20
2.2.3	Tools That can Minimise Reliance on Non-preferred Solvents	20
2.3	Reagent Selection Guides	22

RSC Green Chemistry No. 46

Green and Sustainable Medicinal Chemistry: Methods, Tools and Strategies for the 21st Century Pharmaceutical Industry

Edited by Louise Summerton, Helen F. Sneddon, Leonie C. Jones and James H. Clark

© The Royal Society of Chemistry 2016

Published by the Royal Society of Chemistry, www.rsc.org

2.4	Reagent and Solvent Selection—Substrate Specificity	24
2.5	Future Opportunities	26
2.6	Summary	26
	References	26
Chapter 3	Renewable Solvent Selection in Medicinal Chemistry	28
	<i>James H. Clark, Andrew J. Hunt, Laurianne Moity and James Sherwood</i>	
3.1	Sources of Bio-based Solvents	28
3.2	Solvent Selection	32
3.3	Solvent Polarity	33
3.3.1	Solubility Parameters	33
3.3.2	Computational Polarity Modelling	34
3.3.3	Linear Solvation Energy Relationships	35
3.4	Chapter Summary	38
	References	39
Chapter 4	Beyond Mass-based Metrics: Evaluating the Greenness of Your Reaction	41
	<i>Louise Summerton and Andri Constandinou</i>	
4.1	Introduction	41
4.2	Boundaries of Metrics Assessment	42
4.3	Tracking Improvements	42
4.4	Factors to Take into Consideration	43
4.4.1	Efficiency	46
4.4.2	Waste	46
4.4.3	Solvents	46
4.4.4	Catalyst/Enzyme	47
4.4.5	Elemental Sustainability	47
4.4.6	Energy	47
4.4.7	Health and Safety	48
4.4.8	Chemicals of Environmental Concern	48
4.5	Wider Considerations	49
4.5.1	Renewability	49
4.5.2	Life Cycle Assessment	49
4.6	CHEM21 Metrics Toolkit	50
4.7	Conclusion	51
4.8	Summary Points	51
	References	51

<i>Contents</i>	xlv
Chapter 5 The Importance of Elemental Sustainability and Critical Element Recovery for the Pharmaceutical Industry	54
<i>Andrew J. Hunt</i>	
5.1 Elemental Sustainability	54
5.1.1 Why is Elemental Sustainability Important?	54
5.1.2 What are Critical Elements?	56
5.1.3 Importance to the Pharmaceutical Industry	59
5.2 Chapter Summary	60
References	61
Chapter 6 Presence, Fate and Risks of Pharmaceuticals in the Environment	63
<i>Klaus Kümmerer</i>	
6.1 Introduction	63
6.2 Active Ingredients, Adjuvants, Metabolites and Transformation Products	64
6.3 Introduction into the Environment	66
6.4 Presence in the Environment	66
6.5 Fate	67
6.6 Risks and Risk Assessment	68
6.7 Summary	70
References	70
Chapter 7 Benign by Design	73
<i>Klaus Kümmerer</i>	
7.1 Introduction	73
7.2 Inherently Safe	74
7.3 ‘The End of the Pipe’s End’	74
7.4 Stability—a Question of Conditions	75
7.5 Structure Matters—Benign by Design	76
7.6 Summary	80
References	80
Chapter 8 From Discovery to Manufacturing: Some Sustainability Challenges Presented by the Requirements of Medicine Development	82
<i>John Hayler</i>	
8.1 Introduction	82
8.2 Drug Development	83

8.3	Development of the API Commercial Route	84
8.3.1	Discovery	84
8.3.2	Ensuring Delivery to Proof of Concept	86
8.3.3	From Proof of Concept to Manufacturing	86
8.3.4	The 12 Principles of Green Chemistry	87
8.4	Quality Assurance	91
8.4.1	Control of Process-related Impurities	91
8.4.2	Residual Solvents	91
8.4.3	Residual Metals	92
8.4.4	Transmissible Spongiform Encephalopathy	93
8.4.5	Genotoxic Impurities	93
8.4.6	Control of Polymorphic Form and Stability	94
8.5	Quality by Design	94
8.6	Compound Attrition	96
8.7	Conclusions	96
	Acknowledgements	97
	References	97
Chapter 9	Medicinal Chemistry: How “Green” is Our Synthetic Tool Box?	101
	<i>Josef Messinger, Leena Otsomaa and Sirpa Rasku</i>	
9.1	Introduction	101
9.2	From Hit to Candidate in Drug Discovery	102
9.3	Multiparameter Space of Drug Discovery	103
9.4	Lead Optimization Phase in Drug Discovery	103
9.5	Synthetic Tool Box and Reaction Analysis	105
9.6	‘Greenness’ and Metrics	105
9.7	Magic Triangle: Choice of Synthetic Path	107
9.8	Application of Green Chemistry Metrics	109
9.9	How to Decrease MI and Amount of Waste?	111
9.10	Energy Consumption	113
9.11	How “Green” is Our Synthetic Tool Box?	113
9.12	Summary	113
	References	114
Chapter 10	Design of Experiments (DoE) for Greener Medicinal Chemistry	116
	<i>Jonathan D. Moseley</i>	
10.1	Introduction	116
10.2	Why use DoE in Medicinal Chemistry?	117

<i>Contents</i>	xlvii
10.3 Design of Experiments Explained	118
10.4 Practical Considerations	121
10.5 A Case Study	125
10.6 Summary	126
Acknowledgements	126
References	127
Chapter 11 Pd-catalysed Cross-couplings for the Pharmaceutical Sector and a Move to Cutting-edge C–H Bond Functionalization: Is Palladium Simply Too Precious?	129
<i>Ian J. S. Fairlamb</i>	
Summary	137
Financial Disclosure	138
References	138
Chapter 12 The Growing Impact of Continuous Flow Methods on the Twelve Principles of Green Chemistry	140
<i>A. John Blacker, Jessica R. Breen, Richard A. Bourne and Christopher A. Hone</i>	
12.1 Introduction	140
12.2 Principle 1: Prevent Waste Instead of Treating it	141
12.3 Principle 2: Design Atom-efficient Methods	142
12.4 Principle 3: Wherever Practicable, Synthetic Methodologies Should be Designed to Use and Generate Substances That Possess Little or no Toxicity to Human Health and the Environment	143
12.5 Principle 4: Design New Products That Preserve Functionality While Reducing Toxicity	143
12.6 Principle 5: Minimise the Use of Auxiliary Reagents and Solvents	144
12.7 Principle 6: Minimal Energy Requirements	145
12.8 Principle 7: Renewable Raw Materials	146
12.9 Principle 8: Avoid Unnecessary Derivatization	148
12.10 Principle 9: Catalytic Reagents are Superior to Stoichiometric Reagents	148
12.11 Principle 10: Design New Products With Biodegradable Capabilities	150
12.12 Principle 11: Real-time and Online Process Analysis	150

12.13	Principle 12: Substances should be chosen so as to Minimize the Potential for Chemical Accidents, Including Releases, Explosions and Fires	151
12.14	Summary	154
	References	154
Chapter 13	Green Catalytic Direct Amide Bond Formation	156
	<i>Farhana K. Ferdousi and Andrew Whiting</i>	
13.1	Introduction	156
13.2	Current Industrial Methods for Synthesizing Amide Bonds	157
13.3	Research Trends: The Development of New Catalytic Systems	159
13.4	Pros and Cons of New Catalytic Methods	162
13.5	Application and Outlook for Catalytic Amidation in Pharmaceuticals and Fine Chemicals	162
13.6	Conclusion	163
	References	163
Chapter 14	Synthetic Biology for Organic Syntheses	165
	<i>Birgit Wiltschi and Anton Glieder</i>	
14.1	Synthetic Biology: A New Branch of Synthetic Chemistry?	165
14.1.1	Synthetic Organic Chemistry Goes Green	165
14.1.2	Biochemistry is Green <i>per se</i> in Many Aspects	166
14.1.3	Synthetic Biology: Design and Synthesis of Biological Systems	167
14.2	The Emerging Discipline of Synthetic Biology	168
14.2.1	What Is Synthetic Biology?	168
14.2.2	Parts, Devices and Systems: Basic Principles of Synthetic Biology	168
14.3	Opportunities Synthetic Biology offers Green Chemistry	170
14.3.1	Synthetic Biology in Service to Synthetic Chemistry?	170
14.3.2	Opportunities for Synthetic Biology in Green Chemistry	171
14.3.3	A Synthetic Biology Approach for the Biosynthesis of Artemisinin	171
14.3.4	Vanillin Production in Yeasts	173

<i>Contents</i>	xlix
14.4 Limitations of Synthetic Biology for Green Chemistry	176
14.5 Summary	178
Acknowledgements	178
References	178
Chapter 15 Biocatalysis for Medicinal Chemistry	180
<i>A. S. Wells</i>	
15.1 Introduction to Recent Advances in Biocatalysis	180
15.2 Some Enzyme Classes Readily Accessible to Medicinal Chemists	183
15.2.1 Hydrolase Enzymes	184
15.2.2 Ketone Reductases	184
15.2.3 ω -Transaminase Enzymes	185
15.2.4 Cytochrome P450s	187
15.3 A Glimpse at Synthetic Biology and Pharmaceutical Synthesis	188
15.4 Chapter Summary	189
References	190
Chapter 16 Base Metals in Catalysis: From Zero to Hero	192
<i>J. Maes, E. A. Mitchell and B. U. W. Maes</i>	
16.1 Base Metals: “How Can We Serve You”?	192
16.2 Base Metal Catalysis as a Sustainable Toolbox in Modern Chemistry: The Direct Amination Case	196
16.3 Chapter Summary	199
References	201
Chapter 17 ‘Green’ and Sustainable Halogenation Processes	203
<i>Graham Pattison</i>	
17.1 Introduction	203
17.2 Electrophilic Fluorination	204
17.3 Nucleophilic Fluorination	208
17.4 C–H Fluorination	211
17.5 Trifluoromethylation	213
17.6 Other Halogenation Processes	214
17.7 Summary	216
Acknowledgements	216
References	216
