Introduction and System Considerations

Chapter 1	Concepts of Photoelectrochemical Energy Conversion and Fuel Generation	3
	<i>Hans Joachim Lewerenz and Ian D. Sharp</i>	
1.1	Introductory Remarks	3
1.2	Semiconductor Junctions and Dark Electrochemical Processes	5
1.2.1	Concept of the Classical Silicon Solar Cell	5
1.2.2	The Semiconductor–redox Electrolyte Contact	7
1.2.3	Dark Currents at the Semiconductor–electrolyte Boundary	10
1.2.4	The Role of Surface States at the Electrolyte Boundary	12
1.3	Semiconductor Junctions for Solar Energy Conversion	14
1.3.1	Overview of Junction Types	14
1.3.2	Junctions for Photoelectrochemical Energy Conversion	16
1.4	Photocurrent Generation at Illuminated Semiconductor Junctions	21
1.4.1	Photon Absorption	21
1.4.2	Illuminated Rectifying Junctions	23
1.5	Photoelectrochemical Water Splitting	25
1.6	Tandem Junction Water Splitting Cells	29

Energy and Environment Series No. 22

Integrated Solar Fuel Generators

Edited by Ian D. Sharp, Harry A. Atwater and Hans-Joachim Lewerenz

1.7	New and Emerging Materials for Photoelectrochemical Energy Conversion	32
1.8	Concluding Remarks	36
	References	36
Chapter 2	Photo-electrochemical Hydrogen Plants at Scale: A Life-cycle Net Energy Assessment	43
	<i>Jeffery B. Greenblatt</i>	
2.1	Introduction	43
2.2	Methods	46
2.2.1	Modeling Approach	46
2.2.2	Uncertainty	48
2.2.3	Externally-supplied <i>versus</i> On-site Electricity	51
2.2.4	PEC Cell and Module Design	51
2.2.5	Balance of System (panel-, field- and facility-level) Design	58
2.3	Results	62
2.3.1	Re-use of Materials	67
2.3.2	Solar Concentration	70
2.3.3	Scale-up Analysis	70
2.4	Conclusions	71
	Acknowledgements	72

<i>Contents</i>	xiii
Chapter 4 Surface Science, X-ray and Electron Spectroscopy Studies of Electrocatalysis	117
<i>Daniel Friebe</i>	
4.1 Introduction	117
4.2 Laboratory Based Methods for Surface Characterization	120
4.2.1 UHV-based Surface Science	120
4.3 Synchrotron-based <i>in situ</i> and <i>operando</i> Spectroscopy	125
4.3.1 Photon-in/photon-out Methods: Experimental Setup for <i>operando</i> Spectroscopy, X-ray Absorption, and High Resolution X-ray Spectroscopy	126
4.3.2 Ambient Pressure XPS	137
4.4 Summary and Outlook	148
References	149
Chapter 5 Evaluating Electrocatalysts for Solar Water-splitting Reactions	154
<i>Charles C. L. McCrory, Suho Jung and Jeremy Kallick</i>	
5.1 Introduction	154
5.2 Experimental Considerations	155
5.2.1 Cell Design	155
5.2.2 Auxiliary Electrode	156
5.2.3 Reference Electrodes	157
5.2.4 Working Electrode Material	159
5.2.5 Catalyst Deposition and Characterization	160
5.3 Catalyst Performance	161
5.3.1 Elemental Analysis	163
5.3.2 Catalytic Activity	163
5.3.3 Short-term Stability	164
5.3.4 Extended Stability	165
5.3.5 Faradaic Efficiency Measurements	167
5.3.6 Measuring Catalyst Surface Area	168
5.4 Benchmarking Catalyst Performance	170
5.4.1 Primary Figure of Merit	170
5.4.2 Comparing Electrocatalytic Performance	172
5.5 Conclusions	174
References	175

Semiconductor Light Absorbers

Chapter 6	Heterojunction Approaches for Stable and Efficient Photoelectrodes	185
	<i>Joel W. Ager</i>	
6.1	Introduction	185
6.2	Semiconductor–Electrolyte Interface in the Context of Chemical Conversion	188
6.2.1	Overview	188
6.2.2	Simple Picture of an Unpinned Semiconductor–Liquid Junction (SLJ)	188
6.2.3	Electrically Decoupled Photovoltaic and Catalyst	192
6.2.4	Heterojunction Design for Stability and Efficiency	194
6.3	JCAP Experimental Work	194
6.3.1	Photocathodes	194
6.3.2	Photoanodes	197
6.4	Summary and Outlook	205
	Acknowledgements	205
	References	205
 Chapter 7	 Artificial Photosynthesis with Inorganic Particles	 214
	<i>Frank E. Osterloh</i>	
7.1	Why Particles?	214
7.1.1	Photoreactors	216
7.2	Absorber Configurations	218
7.3	Stability	219
7.4	Ideal Limiting Solar-to-hydrogen (STH) Efficiency	220
7.5	Experimental Efficiencies	223
7.6	Mechanism of Water Splitting Photocatalysis	224
7.7	Free Energy of Photocatalysts	224
7.8	Light Absorption and Exciton Generation	225
7.9	Recombination	227
7.9.1	Auger Recombination	228
7.9.2	Shockley–Read–Hall Recombination	229
7.9.3	Surface Recombination	230
7.9.4	Radiative Recombination	233
7.9.5	Overall Lifetime	234

7.10	Charge Transport	234
7.11	Charge Separation	237
	7.11.1 Junctions	237
	7.11.2 Electric Dipoles	244
	7.11.3 Ohmic Contacts	245
7.12	Charge Transfer Reactions at the Cocatalyst–Liquid Interface	247
7.13	Charge Transfer Reactions at Semiconductor– Liquid Interfaces	248
	7.13.1 Controlling the Back Reaction	251
	7.13.2 Photocorrosion	252
	7.13.3 Electrolyte Effects and pH	253
	7.13.4 Theoretical Modeling	255
	7.13.5 Promising Absorber Materials	256
7.14	Conclusion	258
	Acknowledgements	258

Chapter 8 Degradation of Semiconductor Electrodes in Photoelectrochemical Devices: Principles and Case Studies 281

Johanna Eichhorn, Guiji Liu and Francesca M Toma

8.1	Introduction	281
8.2	Thermodynamic and Kinetic Requirements for Material Stability	282
	8.2.1 Thermodynamic Aspects	282
	8.2.2 Kinetic Aspects	287
8.3	Degradation Mechanisms of Semiconductor Materials	287
	8.3.1 Corrosion	288
	8.3.2 Intercalation and Hydroxylation	289
	8.3.3 Chemical Destabilization	289
8.4	Investigation of Material Instability	289
	8.4.1 Cuprous Oxide	290
	8.4.2 Titanium Dioxide	293
	8.4.3 Bismuth Vanadate	295
8.5	Strategies for Improving Material Stability	300
	Acknowledgements	300
	References	301

New Materials and Components

Chapter 9	High Throughput Experimentation for the Discovery of Water Splitting Materials	307
	<i>John M. Gregoire, David A. Boyd, Dan Guevarra, Joel A. Haber, Ryan Jones, Kevin Kan, Martin Marcin, Paul F. Newhouse, Aniketa Shinde, Edwin Soedarmadji, Santosh K. Suram and Lan Zhou</i>	
9.1	Mission-driven Materials Discovery: Introduction and Strategies	307
9.1.1	High Throughput Screening for Specific Device Components and Operating Conditions	307
9.1.2	General Strategies for Constructing Experimental Screening Pipelines	309
9.2	Cross-cutting Capabilities: Materials Synthesis and Data Management	310
9.2.1	Inkjet Printing of Functional Metal Oxides	311
9.2.2	Combinatorial Physical Vapor Deposition	314
9.2.3	Thermal Processing	316
9.2.4	Data Management	317
9.3	Experimental Pipeline for Discovering OER Electrocatalysts	319
9.3.1	The Scanning Droplet Cell and Its Deployment for Electrocatalyst Discovery	319
9.3.2	Parallel Screening <i>via</i> Bubble Imaging	323
9.3.3	Screening Libraries with Unstable Catalysts	324
9.3.4	Materials Characterization for Electrocatalysts	325
9.4	Experimental Pipeline for Discovering Photoanodes	325
9.4.1	High Throughput Spectroscopy for Band Gap Screening	325
9.4.2	Colorimetry as a Parallel Screen	328
9.4.3	Photoelectrochemistry with the Scanning Droplet Cell	329
9.4.4	Material Characterization of Photoanodes: Linking to Theory	330
9.5	Combining Materials and Techniques for Discovery of Integrated Materials	333
9.6	Lessons Learned and Future Prospects	337
	Acknowledgements	337
	References	338

<i>Contents</i>	xvii
Chapter 10 Membranes for Solar Fuels Devices	341
<i>Daniel J. Miller and Frances A. Houle</i>	
10.1 Transport Challenges in Membranes for Solar Fuels Devices	342
10.2 Membrane Materials and Structure	344
10.3 Commercial Membranes	346
10.4 Transport of Solutes in Membranes	350
10.5 Solute Sorption	352
10.6 Solute Diffusion	353
10.7 Water Sorption	356
10.8 Electrical Properties	359
10.9 Multicomponent Transport	363
10.10 Measurement of Transport Parameters in Membranes	365
10.11 Phenomena Affecting Transport: Physical Aging and Degradation	369
10.12 JCAP Membrane Research	371
10.13 Outlook for Membranes in CO ₂ Reduction Devices	376
List of Symbols	377
References	379

Devices and Modelling

Chapter 11 Prototyping Development of Integrated Solar-driven Water-splitting Cells	389
<i>Chengxiang Xiang, Karl Walczak, Joel Haber, Ryan Jones, Jeffrey W. Beeman, Dan Guevarra, Chris Karp, Rui Liu, Matthew Shaner, Ke Sun, William West and Lan Zhou</i>	
11.1 Introduction	389
11.2 Materials and Components	391
11.2.1 Selection and Design Consideration of Light Absorber Materials	391
11.2.2 Selection and Design Consideration of Electrolytes	398
11.2.3 Incorporation of Membrane Separators	407
11.2.4 Chassis and Auxiliary Components	413
11.2.5 Integration of Protective Layers with Catalysts and Light Absorbers	415

11.3	Full Device Characterization and Evaluation	427
11.3.1	Different Sources of Lights and Calibration Methods	427
11.3.2	Product Collection	429
11.3.3	Outdoor Testing	431
11.4	System Engineering Approaches	434
11.4.1	Introduction to System Engineering	434
11.4.2	Development of Hierarchical Requirements	435
11.4.3	Testing Plan	436
11.4.4	Reviews	440
11.5	Conclusion and Outlook	442
	References	443
Chapter 12	High-efficiency Water Splitting Systems	454
	<i>Matthias M. May, Henning Döscher and John A. Turner</i>	
12.1	The Need for High Efficiency in Solar Fuel Generation	454
12.2	Efficiency Limitations and Prospects for Photoelectrochemical Energy Conversion	456
12.2.1	Fundamental Limitations: Detailed Balance Limit and Catalysis	456
12.2.2	Further Relevant Loss Mechanisms and Mitigation Strategies	460
12.3	III-V Semiconductor Tandem Structures: A Testbed for High Efficiency	467
12.3.1	History of the III-V Compound Semiconductors and High-efficiency Solar Cells	467
12.3.2	Highly Efficient III-V Tandem Structures in Solar Water Splitting	469
12.4	Efficiency Measurement and Characterization Strategies	480
12.4.1	Standard Solar Irradiance <i>vs.</i> Laboratory Light Sources	480
12.4.2	Tandem Device Characterization: A Case Study on Common Practice <i>vs.</i> Result Validation	483
12.4.3	Utilization of Natural Sunlight and Secondary Illumination Errors	486
