<b>Chapter 1</b>	<b>Intensified Fermentation Processes and Equipment</b>	<b>1</b>
	<i>H. J. Noorman, W. van Winden, J. J. Heijnen and R. G. J. M. van der Lans</i>	
1.1	Introduction	1
1.2	Fermentation	3
	1.2.1 Fermentation Processes	3
	1.2.2 Fermentation Equipment	4
1.3	Fermentation Fundamentals and Rate-limiting Factors	6
	1.3.1 Stoichiometry/Kinetics	6
	1.3.2 Operation Modes: Use of the Invested Utilities to the Max	7
	1.3.3 Transport Limitations	9
	1.3.4 Scale Dependency of Flow Regimes and Transport	9
	1.3.5 Biomass Retention	9
1.4	Hydrodynamics	10
	1.4.1 Hydrodynamics in Non-stirred Fermenters	10
	1.4.2 Hydrodynamics in Stirred Fermenters	13
	1.4.3 Mass Transfer	15
	1.4.4 Heat Transfer	18
	1.4.5 Liquid Mixing	20
1.5	Fermentation Intensification	22
1.6	Examples	24
	1.6.1 Bioethanol Production with <i>Saccharomyces cerevisiae</i> : Smart Integration (FI Principle 4)	24

1.6.2	Biopharmaceuticals Production with Mammalian Cells: Jump <i>via</i> Cell Retention (FI Principles 2 and 4)	25
1.6.3	Bakers' Yeast Production: Debottlenecking Oxygen Transfer (FI Principle 3)	26
1.6.4	Synergistic Production of Complex and Non-natural Compounds <i>via</i> Fermentation (FI Principles 1 and 4)	28
1.7	Fermentation Intensification Limits	28
1.7.1	Bakers' Yeast Case	31
1.7.2	BDO Case	34
1.8	Conclusions and Outlook	35
	Abbreviations	38
	Acknowledgements	38
	References	38
<b>Chapter 2</b>	<b>Rotating Bioreactors: Concept, Designs and Applications</b>	<b>42</b>
	<i>Kamelia Boodhoo</i>	
2.1	Introduction	42
2.2	Background	43
2.2.1	Bioreactor Design Requirements for Microbial Transformations	43
2.2.2	Rotating Reactor: Design Concept, Characteristics and Processing Benefits	45
2.3	Rotating Reactors for Microbial Fermentation and Biotransformation Applications	46
2.3.1	Rotating Fluidised Bed	46
2.3.2	Rotating Bed Bioreactors	49
2.3.3	Rotating Biofilm Contactors	54
2.3.4	Rotating Membrane Bioreactors	57
2.4	Summary and Outlook	58
	References	59
<b>Chapter 3</b>	<b>Intensified Downstream Processing in Biofuels Production</b>	<b>62</b>
	<i>Anton A. Kiss and Costin Sorin Bildea</i>	
3.1	Introduction	62
3.2	Types of Biofuels	63
3.3	Biodiesel	65
3.3.1	Dividing-wall Column (DWC) Technology	66
3.3.2	Reactive Distillation	67
3.3.3	Reactive Dividing-wall Column	69
3.3.4	Other PI Techniques	70

3.4	Bioethanol	71
3.4.1	Extractive Dividing-wall Column	72
3.4.2	Heat Pump Assisted Extractive Distillation	72
3.5	Biobutanol	76
3.6	Dimethyl Ether	77
3.6.1	DWC Ternary Separation	79
3.6.2	Reactive DWC	80
3.6.3	Reactive Distillation	81
3.6.4	Catalytic Cyclic Distillation	82
3.7	Concluding Remarks	83
	References	84
<b>Chapter 4</b>	<b>Improving Fermentation by Product Removal</b>	<b>86</b>
	<i>M. C. Cuellar and A. J. J. Straathof</i>	
4.1	Introduction	86
4.2	The Roles of ISPR	88
4.2.1	Improving the Product Formation Rate and Yield of Product on Substrate	88
4.2.2	Avoiding Product Degradation	91
4.2.3	Improving Downstream Processing	91
4.3	Process Design Aspects	92
4.3.1	Configurations	92
4.3.2	Batch <i>Versus</i> Continuous Operating Mode	93
4.3.3	The Importance of Cell Reuse in ISPR	95
4.3.4	Recycles	96
4.3.5	Modelling and Simulation	96
4.3.6	Calculating Generic Conditions at Which ISPR is Appropriate	98
4.4	ISPR for Phase Separating Compounds	98
4.4.1	General Considerations	98
4.4.2	Example: Development of ISPR for 2-butanol Production	101
4.4.3	Example: Development of ISPR for Sesquiterpene Production	102
4.5	Concluding Remarks	104
	Appendix. Comparison of Performance of Base Case and ISPR Case	105
	References	106
<b>Chapter 5</b>	<b>Liquid–Liquid Extraction in Processing of Bioproducts</b>	<b>109</b>
	<i>André B. de Haan and Snehal D. Birajdar</i>	
5.1	Introduction to Liquid–Liquid Extraction	109
5.2	Process Intensification in Liquid–Liquid Extraction	110

5.2.1	Intensification Using New Materials in Extraction Systems	111
5.2.2	Intensification by Novel Equipment and External Force	114
5.2.3	Intensification by Integrated and Hybrid Extraction Methods	117
5.3	Application of Liquid-Liquid Extraction to Bioproducts	118
5.3.1	Recovery of Fermentation-derived Products	119
5.3.2	Biofuels, Platform Chemicals and Biomass Hydrolysate Products	122
5.3.3	Microalgal Bio-based Products	123
5.4	Conclusions and Outlook	124
	References	125
<b>Chapter 6</b>	<b>Organic Solvent Nanofiltration for an Intensified Processing of Renewable Raw Materials</b>	<b>132</b>
	<i>K. Werth and M. Skiborowski</i>	
6.1	Introduction	132
6.1.1	Oils and Fats	133
6.1.2	Current Processes and Challenges	133
6.2	Organic Solvent Nanofiltration	134
6.2.1	Fundamentals, Benefits and Constraints	134
6.2.2	Membrane Modules, Cascades and Membrane-assisted Processes	135
6.3	Applications	137
6.3.1	Solvent Recovery	138
6.3.2	Deacidification	139
6.4	Conclusion	141
	References	142
<b>Chapter 7</b>	<b>Green Fuels and Fuel Additives Production in Simulated Moving Bed Reactors</b>	<b>145</b>
	<i>R. P. V. Faria, N. S. Graça and A. E. Rodrigues</i>	
7.1	Simulated Moving Bed Reactor Technology – What is it?	145
7.2	Design and Modelling of Simulated Moving Bed Reactor Processes	148
7.3	Simulated Moving Bed Reactor in the Context of Bio-based Industries: Production of Fuels and Fuel Additives	152
7.3.1	Production of Acetals from Bioethanol	154
7.3.2	Valorization of Bioglycerol	158

7.4 Conclusions	161
Nomenclature	162
Greek Letters	162
Superscripts and Subscripts	162
Abbreviations	163
Acknowledgements	163
References	163
<b>Chapter 8 Intensification of Enzymatic Hydrolysis of Cellulose Using High Frequency Ultrasound</b>	<b>166</b>
<i>Yusuf Gbadebo Adewuyi</i>	
8.1 Introduction	166
8.2 Theoretical Background	169
8.2.1 Fundamental Aspects of Ultrasound and Cavitation	169
8.2.2 Overview of Cavitation-assisted Enzymatic Hydrolysis	171
8.2.3 Overview of the Effects of Ultrasound on Enzymes	173
8.3 Experimental Section	174
8.3.1 Materials	174
8.3.2 Procedures and Sample Preparations	175
8.3.3 Brunauer–Emmett–Teller (BET) and X-ray Diffraction (XRD) Surface Analysis	176
8.4 Results and Discussion	177
8.4.1 Enzymatic Hydrolysis of Cellulose in the Presence and Absence of Ultrasound	177
8.4.2 Effects of the Frequency of Ultrasound on Enzymatic Hydrolysis	179
8.4.3 BET and XRD Studies	180
8.5 Energy, Cost, and Scale-up Considerations	182
8.6 Conclusions	184
Acknowledgements	184
References	185
<b>Chapter 9 Process Intensification for Hydroprocessing of Vegetable Oil</b>	<b>188</b>
<i>Anil K. Sinha and Aditya Rai</i>	
9.1 Introduction	188
9.2 Experimental	191
9.2.1 Catalyst Coatings for Microchannel Reactors	191

9.2.2	Microchannel Plate Pretreatment and Catalyst Coating	192
9.2.3	Experimental Setup	192
9.2.4	Catalyst Activity Test and Jatropha Properties	194
9.3	Results and Discussion	195
9.3.1	Physicochemical Properties of the Catalyst	195
9.3.2	<C9 Hydrocarbons Yield	195
9.3.3	C9–C14 Hydrocarbons Yield	196
9.3.4	C15–C18 Hydrocarbons Yield	197
9.3.5	>C18 Oligomerized Products Yield	198
9.3.6	Influence of Pressure on Product Yield in the Microchannel Reactor	198
9.3.7	Kinetics and Thermodynamics of Vegetable Oil Hydroprocessing	200
9.3.8	Computational Dynamics Studies	200
9.4	Conclusion	205
	Acknowledgements	207

<b>Chapter 10</b>	<b>Enzymatic Reactive Absorption and Distillation</b>	<b>210</b>
	<i>Matthias Wierschem, Mathias Leimbrink, Mirko Skiborowski, Rene Heils, Irina Smirnova and Andrzej Górak</i>	
10.1	Introduction	210
10.1.1	Reactive Absorption (RA) and Distillation (RD)	211
10.1.2	Enzymatic Reactive Absorption (ERA) and Distillation (ERD)	212
10.2	Technical Realization	215
10.2.1	Equipment for ERA and ERD Processes	215
10.2.2	Application of Enzymes	219
10.3	Modeling and Design	225
10.3.1	Modeling of Continuous ERA and ERD	226
10.3.2	Reaction Kinetics for Enzyme Reactions	228
10.4	Application Examples	229
10.4.1	Application of ERA for CO <sub>2</sub> Capture	230
10.4.2	Application of ERD	234
10.5	Conclusions	238
	Acknowledgements	240

<b>Chapter 11</b>	<b>Process Intensification of Immobilized Enzyme Reactors</b>	<b>249</b>
	<i>Parimala Shivaprasad and Emma Anna Carolina Emanuelsson</i>	
11.1	Introduction	249
11.2	Enzymes as Catalysts	250
11.3	Enzymatic Reactors: Conventional <i>Versus</i> Process Intensified Reactors	251
11.3.1	Conventional Reactors and Enzyme Catalysis	251
11.3.2	Process Intensified Enzymatic Reactors (PI-ER)	252
11.4	Conclusion	263
	References	263
<b>Chapter 12</b>	<b>Process Intensification of Enzymatic Biotransformation Processes</b>	<b>268</b>
	<i>Laurence R. Weatherley, Aravind Satya Gangu, Aaron M. Scurto and Jerzy Petera</i>	
12.1	Introduction	268
12.1.1	Enzymatic Biotransformation	268
12.1.2	Process Intensification	271
12.2	Process Intensification and Biotransformation	272
12.3	Case Study 1 – Extractive Biotransformation of Naphthalene	277
12.4	Case Study 2 – Intensification of Enzymatic Hydrolysis of Triglyceride Ester	279
12.5	Conclusions	284
	References	285
<b>Chapter 13</b>	<b>Microalgae: From Bio-based Curiosity Towards a Bulk Feedstock</b>	<b>289</b>
	<i>G. P. 't Lam, M. H. Vermuë, M. Janssen, M. J. Barbosa, R. H. Wijffels, M. H. M. Eppink and C. van den Berg</i>	
13.1	Microalgae and Their Potential for Bulk-commodities and Biofuels	289
13.2	Cultivation of Microalgae: Current State and Emerging Trends	290
13.2.1	Current Phototrophic Cultivation	290
13.2.2	Novel Reactor Designs	293

13.3	From Single to Multiple Products	294
13.3.1	Necessity for Low Cost- and Mild Technologies	294
13.3.2	Harvesting Microalgae	295
13.3.3	Cell Disruption	296
13.3.4	Extraction	297
13.4	Concluding Remarks	298
13.4.1	State-of-development of Microalgae for Bulk Products	298
13.4.2	Further Steps Towards Feasible Bulk-commodity Production	299
	References	299

## **Chapter 14 Process Intensification in Glutamic Acid Production** **303**

*P. Pal*

14.1	Introduction	303
14.2	Current Production Process and the Challenges in Sustainability	304
14.3	Process Intensification Approaches Towards Sustainability	306
14.4	Process Intensification in Glutamic Acid Production Through a Membrane-integrated Reactor System	307
14.5	The Fermentation Media for the Bioprocess	311
14.6	Fermentation	311
14.7	Analytical Determination for Process Monitoring	312
14.8	Membrane Fouling and Cleaning	312
14.9	Analysis of Process Intensification Through a Membrane-integrated Hybrid Reactor System	313
14.9.1	Production Parameters	313
14.9.2	Plant Configuration	315
14.9.3	Space Intensification	317
14.9.4	Flexibility in Capacity and Application	319
14.9.5	Energy Intensity	319
14.9.6	Labour Intensity	320
14.9.7	Eco-friendliness	321
14.9.8	Economic Gain	321
14.10	Conclusion	325
	References	325

<b>Chapter 15 Intensified Production of Recombinant Proteins</b>	<b>327</b>
<i>Daniel Baur and Massimo Morbidelli</i>	
15.1 Introduction	327
15.1.1 Recombinant Monoclonal Antibodies as Pharmaceuticals	327
15.1.2 Development and Production of a Recombinant Monoclonal Antibody	328
15.1.3 State-of-the-art Monoclonal Antibody Production	328
15.2 Continuous Cultivation of Mammalian Cell Cultures	331
15.2.1 Perfusion Culture Systems	331
15.2.2 Steady State Operation of Continuous Bioreactors	332
15.3 Continuous Countercurrent Chromatography in Monoclonal Antibody Capture	333
15.3.1 Principles of Countercurrent Chromatography	333
15.3.2 Periodic Countercurrent Chromatography	335
15.3.3 Performance Comparison of Capture Processes	335
15.4 Continuous mAb Polishing	337
15.4.1 Multi-column Countercurrent Solvent Gradient Purification	337
15.4.2 Integrated Protein PEGylation	340
15.5 Conclusions	341
References	342
<b>Chapter 16 Intensification of Aqueous Two-phase Extraction for Protein Purification</b>	<b>344</b>
<i>Christoph Brandenbusch, Tim Zeiner and Juliane Merz</i>	
16.1 Introduction	344
16.2 Thermodynamic Background	345
16.2.1 ATPS Phase Equilibria	345
16.2.2 Protein Partitioning	346
16.2.3 Results—Estimating Partition Coefficients in ATPE	350
16.3 Purification of Enzymes in a Mixer–Settler Apparatus	352
16.3.1 Single Stage Experiments	353
16.3.2 Multistage Experiments	355

16.4 Centrifugal Partition Chromatography	356
16.4.1 Experimental	358
16.4.2 Results	358
16.5 Conclusion	361
References	361
<b>Chapter 17 Intensification of Functional Foods Production</b>	<b>365</b>
<i>H. Vaghari, H. Jafarizadeh-Malmiri, N. Harcourt, Z. Sarabadani, N. Anarjan and A. Berenjian</i>	
17.1 Functional Foods	365
17.2 Food Processes Intensification	367
17.3 Process Intensification of Functional Foods Based on Nanodispersion Production	368
17.3.1 Formation of Nanodispersions	369
17.3.2 Classification of the Techniques for Production of Nanodispersions Based on Nature of Solvent Used	370
17.3.3 Process Intensification	372
17.4 Preparation of Functional Nano-sized Lycopene from Tomato Processing Wastes	373
17.4.1 Materials and Methods	373
17.4.2 Results and Discussions	374
17.4.3 Conclusions	377
17.5 Concluding Remarks	377
Acknowledgements	378

<b>Chapter 18 Microwave-enhanced Extraction of Natural and Food Products: from Academia to Innovative and Large-scale Applications</b>	<b>381</b>
<i>Mohammad Turk, Sandrine Perino, Emmanuel Petitcolas and Farid Chemat</i>	
18.1 Introduction	381
18.2 Microwave Heat Transfer	382
18.3 Microwave-assisted Extraction	383
18.3.1 Microwave Combined with Solvent Extraction	384
18.3.2 Microwave Extraction with Water Distillation	385
18.3.3 Microwave Combined with Solvent-free Distillation	386
18.3.4 Microwave-assisted Hydrodiffusion	386
18.3.5 Microwave Steam Diffusion (MSDF)	388
18.3.6 Industrial Application of Microwave-assisted Extraction	389

<i>Contents</i>	xxiii
18.4 Applications	389
18.4.1 Antioxidants	389
18.4.2 Flavors and Fragrances	390
18.4.3 Natural Colors	391
18.4.4 Fats and Oils	392
18.5 Applications of Microwave Extraction in Industry	394
Acknowledgements	394

<b>Chapter 19 Intensified Food Processing Through Membrane Operations</b>	<b>397</b>
<i>A. Cassano, C. Conidi and E. Drioli</i>	
19.1 Introduction	397
19.2 Fundamentals of Membrane Operations	398
19.2.1 Pressure-driven Membrane Operations	398
19.2.2 Membrane Contactors	402
19.2.3 Pervaporation	405
19.2.4 Electrodialysis	406
19.3 Integrated Membrane Operations in Food Processing	407
19.3.1 Fruit Juice Processing	407
19.3.2 Must and Wine Processing	416
19.3.3 Milk and Whey Processing	420
19.4 Conclusions	424
References	425
<b>Chapter 20 Intensified Brewing Systems</b>	<b>430</b>
<i>B. Muster-Slawitsch and C. Brunner</i>	
20.1 Introduction	430
20.2 Short Overview on Brewing	431
20.2.1 Malting	431
20.2.2 Mashing	432
20.2.3 Wort Boiling	434
20.2.4 Fermentation and Maturation	436
20.3 Bottlenecks to Process Intensification	437
20.4 Intensification of Brewing Processes	439
20.4.1 High Gravity Brewing	439
20.4.2 Intensifying Enzymatic Activity in Mashing	440
20.4.3 Intensification in Wort Treatment	445
20.4.4 Fermentation and Maturation	447
20.4.5 Pasteurization	449
20.4.6 Deaeration of Water	449
20.4.7 Dealcoholization	450

20.4.8	From Batch to Continuous	451
20.4.9	Synergy in Process Steps	452
20.5	New Energy Concepts Based on Intensified Brewing Systems	452
20.5.1	Low Temperature Heat Supply and Heat Integration	452
20.5.2	Hydrodynamic Cavitation in Brewing	457
