Chapter 1	The Challenge of Water Splitting in View of Photosynthetic Reality and of Research Trends	1
	<i>H. Tributsch</i>	
1.1	Introduction	1
1.2	The Evolution of Natural Photosynthetic Water Splitting: The Most Remarkable Facts	4
1.2.1	The Missing Overpotential in Photosynthesis: What Is the Evidence?	7
1.3	How Can Photosynthetic Water Oxidation Be More Efficient Than Technical?	9
1.3.1	Thermodynamics of Photo-induced Water Splitting	10
1.3.2	How Did Evolution Optimise Photosynthetic Water Oxidation?	11
1.3.3	How Could Such a Self-organisation Mechanism Be Experimentally Dealt With?	13
1.4	Progress with Artificial Photo-electrochemical Water Splitting	15
1.5	Bio-mimetic Approaches Require Progress in Non-equilibrium, Irreversible Thermodynamics	19
1.5.1	A Paradigm Change Towards a Fundamental Time Arrow Is Needed	21
	References	25

Energy and Environment Series No. 20

Advances in Photoelectrochemical Water Splitting: Theory, Experiment and Systems Analysis
 Edited by S. David Tilley, Stephan Lany and Roel van de Krol

© The Royal Society of Chemistry 2018

Published by the Royal Society of Chemistry, www.rsc.org

Chapter 2	Theoretical Design of PEC Materials	29
	<i>Junjie Wang, Pakpoom Reunchan, Wei Zhou and Naoto Umezawa</i>	
2.1	Introduction	29
2.2	Effects of Doping in Photocatalyst	34
2.2.1	Chromium Doping in SrTiO ₃	34
2.2.2	Sulfur and Silicon Doping in Ag ₃ PO ₄	37
2.3	Band Structure Design of Highly Efficient Photocatalysis by Strain Engineering	41
2.3.1	Strain Engineering for Single-layer SnS ₂	41
2.3.2	Strain Engineering for Layered SnO	45
2.4	Exploration of Photofunctional Materials Employing Evolutional Structure Search	47
2.4.1	Mixed Valence Tin Oxides as Novel Photocatalysts	47
2.4.2	Determination of Crystal Structures of Graphitic Carbon Nitride	52
2.5	Conclusions	57
	Acknowledgements	58
	References	58
Chapter 3	Computational Screening of Light-absorbing Materials for Photoelectrochemical Water Splitting	62
	<i>Ivano E. Castelli, Korina Kuhar, Mohnish Pandey and Karsten W. Jacobsen</i>	
3.1	Introduction	62
3.2	Density Functional Theory and High-throughput Screening	65
3.3	Screening Descriptors and Criteria	68
3.3.1	Abundance, Cost and Herfindahl–Hirschman Index	69
3.3.2	Toxicity	70
3.3.3	Stability	71
3.3.4	Electronic Properties	72
3.3.5	Direct Calculation of Light Absorption	76
3.3.6	Interfaces	78
3.4	Materials Investigated	79
3.4.1	Perovskites	81
3.4.2	Electronic Properties of Existing Materials	90
3.4.3	2D Materials	91

<i>Contents</i>	ix
3.5 Conclusions and Perspectives	92
Acknowledgements	93
References	93
Chapter 4 Unravelling the Charge Transfer Mechanism in Water Splitting Hematite Photoanodes	100
<i>Hamed Hajibabaei, Yuan Gao and Thomas W. Hamann</i>	
4.1 Introduction	100
4.2 Photoelectrochemical Methods	102
4.2.1 Current Density—Voltage (<i>J</i> - <i>V</i>) Curve Measurements	102
4.2.2 Current Transient Measurements	103
4.2.3 Cyclic Voltammetry (CV) Surface Measurements	106
4.2.4 Electrochemical Impedance Spectroscopy (EIS)	107
4.2.5 Intensity Modulated Photocurrent Spectroscopy (IMPS)	109
4.3 Mechanism of Water Oxidation	111
4.3.1 PEC Water Oxidation on Hematite Photoanode	111
4.3.2 Photochemical Water Oxidation on Iron-based Homogeneous Catalysts	114
4.3.3 Determination of Water Oxidation Intermediates <i>via</i> Operando Infrared Spectroscopy	115
4.4 Ternary Metal Oxides for PEC Water Oxidation	119
4.4.1 CuWO ₄	119
4.4.2 BiVO ₄	120
4.5 Outlook	121
4.6 Summary	122
Acknowledgements	122
References	122
Chapter 5 Rate Law Analysis of Water Splitting Photoelectrodes	128
<i>Laia Francàs, Camilo A. Mesa, Ernest Pastor, Florian Le Formal and James R. Durrant</i>	
5.1 Introduction	128
5.1.1 Rate Law Analysis for Solar Fuels Production	128
5.1.2 Kinetic Model	130
5.1.3 Experimental Set-up	134

5.2	Case Studies	135
5.2.1	Oxidation Reactions	136
5.2.2	Reduction Reactions: Proton Reduction on [Cu ₂ O]/RuO _x	152
5.3	Conclusions	159
	Acknowledgements	159
	References	159
Chapter 6	Emerging Semiconductor Oxides for Direct Solar Water Splitting	163
	<i>K. Sivula</i>	
6.1	Introduction	163
6.2	Bismuth Vanadate	166
6.3	Multinary Ferrites	169
6.4	Copper-based Oxides	171
6.5	Delafossites	173
6.6	Strategies for Improving Multinary Oxides	176
6.7	Outlook for Multinary Oxides	177
	References	178
Chapter 7	Particulate Photocatalyst Sheets for Efficient and Scalable Water Splitting	183
	<i>Takashi Hisatomi and Kazunari Domen</i>	
7.1	Introduction	183
7.2	Photocatalyst Sheets Based on SrTiO ₃ :La,Rh and BiVO ₄	184
7.2.1	Preparation and Structure	184
7.2.2	Z-Scheme Water Splitting Based on Electron Transfer <i>via</i> an Underlying Conductor	187
7.2.3	Comparison with Powder Suspensions and Photoelectrode Systems	189
7.2.4	Influence of the Reaction Conditions on the Water Splitting Activity	190
7.2.5	Carbon Conductor-based Sheets Operable at Ambient Pressure	192
7.2.6	Simulation of Band Diagrams and Carrier Density Distributions	194
7.3	Approaches to the Development of Photocatalyst Sheets Based on Narrow Band Gap Photocatalysts	197
7.3.1	LaMg _{1/3} Ta _{2/3} O ₂ N as a Hydrogen Evolution Photocatalyst	197

7.3.2	Unassisted Photoelectrochemical Water Splitting Using a $\text{La}_5\text{Ti}_2(\text{Cu,Ag})\text{S}_5\text{O}_7$ Photocathode and a BaTaO_2N Photoanode	199
7.4	Summary and Future Prospects	203
	Acknowledgements	204
	References	205
Chapter 8	Applications of Bipolar Membranes for Electrochemical and Photoelectrochemical Water Splitting	208
	<i>David A. Vermaas and Wilson A. Smith</i>	
8.1	Introduction	208
8.1.1	Challenges in (Solar Driven) Water Splitting	209
8.1.2	Effect of pH	209
8.1.3	Membranes in (Solar) Water Splitting	210
8.2	Monopolar and Bipolar Ion-exchange Membranes	210
8.2.1	Monopolar Membranes	212
8.2.2	Bipolar Membranes (BPM)	217
8.3	Membrane Performance	223
8.3.1	I - V Curves for Monopolar and Bipolar Membranes	223
8.3.2	Membrane Pricing	224
8.4	Demonstration of BPM's in Water Splitting Systems	224
8.4.1	Single Electrolyte	224
8.4.2	Extreme pH Gradient Across BPM's	225
8.4.3	Intermediate pH Gradient	227
8.4.4	Co-ion Transport (at Non-extreme pH)	227
8.5	BPM's in Other Electrochemical Systems	230
8.5.1	Fuel Cells and Batteries	230
8.5.2	CO_2 Reduction	230
8.6	Outlook/Conclusions	232
	References	232
Chapter 9	Modelling-derived Design Guidelines for Photo-electrochemical Devices	239
	<i>Sophia Haussener, Yannick Gaudy and Saurabh Tembhurne</i>	
9.1	Introduction	239
9.2	Zero-dimensional Models	240
9.2.1	Governing Equations	240
9.2.2	Example Results	241

9.3	Multi-dimensional Models	246
9.3.1	One-dimensional Models	247
9.3.2	Two-dimensional Models	253
9.4	Conclusion	260
	Acknowledgements	261
	References	261
Chapter 10	Technoeconomic Analysis of PEC Water Splitting at Various Scales	266
	<i>Artjom Maljusch and Michael Wullenkord</i>	
10.1	Introduction	266
10.2	Basic Considerations and Definitions	267
10.2.1	Hydrogen Production and Application Scenarios	268
10.2.2	Location	268
10.2.3	Specific Collector Size and Number of PEC-PV Units	268
10.2.4	Fundamental Economic Constraints under Non-concentrated Sunlight	270
10.2.5	Fundamental Economic Constraints under Concentrated Sunlight	271
10.3	Plant Design and Components	273
10.3.1	Safety	275
10.3.2	Cooling and Heating	275
10.3.3	Component Sizing	275
10.4	Life-cycle Analysis	276
10.5	Cost Estimation	279
10.6	Benchmarking	281
10.7	Conclusions and Outlook	281
	Acknowledgements	282
