Chapter 1	Whence Is the Diversity of Diatom Frustules Derived?	1
	<i>James G. Mitchell</i>	
1.1	Introduction	1
1.2	The Frustule in Context	2
1.2.1	The Chemical Milieu	3
1.2.2	Why Are Diatom Frustules Only Now Being Appreciated?	4
1.2.3	Paradigm of Porosity: Why Frustule Detail Matters	4
1.2.4	Resolving the Porosity	6
1.2.5	Chemical <i>versus</i> Physical Balance	6
1.2.6	Shrinking Diatoms	6
1.3	Applying Diatom Frustule Information	7
1.3.1	Linking Diatoms to Lab-on-a-chip Systems	7
1.3.2	Particle Movement at the Nanoscale	7
1.3.3	Ongoing Development	8
1.3.4	Imaging Diatom Structures	9
1.3.5	Exploring Diatom Diversity	10
1.4	Conclusions	11
	References	12
Chapter 2	Interactions of Diatoms with Their Fluid Environment	14
	<i>G. Rosengarten and J. W. Herringer</i>	
2.1	Introduction	14
2.1.1	General Function and Form of the Frustule in Centric Diatoms	15

2.2	Nutrient Transport	17
2.2.1	Transport of Matter in the Ocean	18
2.2.2	Transport of Matter Towards and Across an Osmotroph Cell Membrane	20
2.3	The Dynamic Fluid Environment of Diatoms	27
2.3.1	Advection	27
2.3.2	Sinking/Buoyancy	31
2.3.3	Effect of Chain Formation	32
2.4	Effect of the Frustule on Mass Transport	33
2.4.1	Morphology of the Valve Structure of <i>Coscinodiscus</i> sp. and <i>Thalassiosira</i> sp.	34
2.4.2	Morphology of the Girdle Bands of <i>Coscinodiscus</i> sp.	35
2.4.3	Mass Transport Through the Valve Pores	35
2.4.4	Influence of External Frustule Surface on Mass Transport	41
2.4.5	Mass Transport Through the Girdle Band Pores	43
2.5	Conclusion	46
	Nomenclature	46
	Acknowledgements	47
	References	48
Chapter 3	Nanoengineering of Diatom Surfaces for Emerging Applications	55
	<i>Vandana Vinayak, Khashti Ballabh Joshi, Richard Gordon and Benoit Schoefs</i>	
3.1	Introduction	55
3.2	Lithography: Biomimetic Architecture of Diatoms	58
3.2.1	Nanoimprint Lithography (NIL)	59
3.2.2	Three-Dimensional Laser Lithography (3DLL)	60
3.3	Biological Templates: Protein-directed Template Formation	62
3.3.1	Lab-on-a-chip Technologies	62
3.3.2	Peptide and TiO ₂ -mediated Deposition in Diatom Frustules	64
3.4	Solar Cells for Energy (Heat/Electricity/Biofuel)	66
3.5	Synthesis of Inorganic Nanomaterials	68
3.6	Oxide-based Nanoparticles	70
3.7	Conclusions	71
	References	72

Chapter 4	Functionalization of Frustules From Diatom Cell Culture for Optoelectronic Properties	79
	<i>G. L. Rorrer</i>	
4.1	Introduction	79
4.2	Metabolic Insertion of Metals into the Frustule of Living Diatom Cells	82
4.2.1	Silica Biomineralization	82
4.2.2	Strategy for Metabolic Insertion of Metals into Diatom Cells	83
4.2.3	Post Processing of Diatom Cells	85
4.2.4	Metabolic Insertion of Germanium	87
4.2.5	Changes in Frustule Nanostructure After Metabolic Insertion of Ge Oxides	87
4.2.6	Photoluminescence of Diatom Frustules Containing Metabolically-inserted Ge Oxides	89
4.2.7	Electroluminescence of Diatom Frustules Containing Metabolically-inserted Ge Oxides	91
4.2.8	Metabolic Insertion of Titanium	92
4.2.9	Metabolic Insertion of Other Metals	95
4.3	Deposition of Metals onto the Diatom Frustule Biosilica	95
4.3.1	Solution-based Metal Deposition Processes	96
4.3.2	Device Applications for Metal-coated Diatom Biosilica	98
4.3.3	Bioclastic Replacement Processes	98
4.4	Functionalization of Diatom Biosilica with Biomolecules	98
4.4.1	Diatom-enabled Photoluminescence-based Biosensing	100
4.4.2	Diatom-enabled SERS-based Biosensing	104
4.5	Summary and Suggested Future Directions	104
	Acknowledgements	106
	References	107
Chapter 5	Micro- and Nano-optical Devices from Diatom Nanostructures: Light Control by Mother Nature	111
	<i>Ilaria Rea, Principia Dardano, Maria Antonietta Ferrara and Luca de Stefano</i>	
5.1	Introduction	111
5.2	Characterization of Diatoms' Ultrastructure by Digital Holography Combined Imaging	112

5.3	Optical Properties of Diatoms	117
5.3.1	Diatom Photoluminescence	117
5.3.2	Lens-less Focusing	118
5.4	Diatom-based Photonic Applications	119
5.4.1	Gas Sensing	119
5.4.2	Biosensing	121
5.4.3	Surface-enhanced Raman Spectroscopy	122
5.5	Conclusions	123
	Acknowledgements	123
	References	123
Chapter 6	Immobilization of Proteins on Diatom Biosilica	126
	<i>N. Kröger, N. C. Dubey and E. Kumari</i>	
6.1	Introduction	126
6.2	Methods for Immobilizing Proteins on Diatom Biosilica	128
6.2.1	<i>In vitro</i> Immobilization	129
6.2.2	<i>In vivo</i> Immobilization	134
6.3	Applications	138
6.3.1	Catalysis	139
6.3.2	Sensing	142
6.3.3	Drug Delivery	143
6.4	Conclusions and Future Prospects	145
	Acknowledgements	145
	References	145
Chapter 7	The Potential of Modified Diatom Frustules for Solar Energy Conversion	150
	<i>Soundarrajan Chandrasekaran and Nicolas H. Voelcker</i>	
7.1	Introduction	150
7.1.1	Dye-sensitised Solar Cells	151
7.1.2	Photoelectrochemical Hydrogen Production	152
7.1.3	Diatom Frustules	153
7.2	Shape Retention Modifications of Diatom Frustules for Solar Energy Conversion	154
7.2.1	Thermo-chemical Conversion of Diatom Frustules to Semiconductors	154
7.2.2	Biological Insertion of Semiconductors into Diatom Frustules	157
7.2.3	Surface Modification of Diatom Frustules	157
7.2.4	Microfabrication of Three-dimensional Scaffolds Using Diatom Frustules	160
7.3	Modified Diatom Frustules for Dye-sensitised Solar Cell Applications	162

7.4	Modified Diatom Frustules for Photoelectrochemical Hydrogen Production Applications	164
7.5	Conclusions and Outlook	165
	References	166
Chapter 8	Diatom Silica as an Emerging Biomaterial for Energy Conversion and Storage	175
	<i>Yu Xin Zhang and Xiao Wen Sun</i>	
8.1	Introduction	175
8.2	Diatom Silica: Structure and Properties	178
8.3	Diatoms for Lithium Ion Battery Materials	180
8.4	Diatoms for Energy Storage: Supercapacitors	182
8.5	Diatoms for Solar Cells	185
8.6	Diatoms for Hydrogen Storage	191
8.7	Diatoms for Thermal Energy Storage	192
8.8	Outlook	194
	Acknowledgements	194
	References	195
Chapter 9	Diatoms: A Natural Source of Nanostructured Silica for Drug Delivery	201
	<i>Monica Terracciano, Ilaria Rea, Luca De Stefano and Hélder A. Santos</i>	
9.1	Introduction	201
9.2	Natural Nanostructured Silica from Diatoms	203
9.3	Diatom Frustule Processing for the Preparation of Non-toxic Drug Delivery Micro/nano Carriers	204
9.4	Biochemical Modification Strategies of Diatom Surfaces	207
9.5	Diatom Microparticles for Drug Delivery Applications	208
9.6	Diatom Nanoparticles for Drug Delivery Inside Cancer Cells	209
9.7	Conclusions	214
	Acknowledgements	215
	References	216
Chapter 10	Diatomaceous Earth, A Natural Insecticide for Stored Grain Protection: Recent Progress and Perspectives	219
	<i>Dusan Losic and Zlatko Korunic</i>	
10.1	Introduction	219
10.2	Diatomaceous Earth (DE): Sources and Physical and Chemical Properties	222

10.3 Diatomaceous Earth (DE): A Natural Insecticide for Pest Control	224
10.3.1 Early Use and Experimental Results	224
10.3.2 The Insecticidal Modes of Action	226
10.3.3 An Overview of Key Parameters That Influence the Insecticidal Performance of DE	228
10.3.4 The Limitations of DE Insecticides for Grain Protection	238
10.3.5 DE Formulation Development and Improvement	239
10.4 Conclusions	243
Acknowledgements	243
References	243
Subject Index	248
