Chapter 1 NMR Consequences of the Nucleus–Electron Spin Interactions	1
<i>Giacomo Parigi and Claudio Luchinat</i>	
1.1 The Effect of Paramagnetism on NMR Spectra	1
1.1.1 The Hyperfine Coupling	2
1.1.2 The Curie Spin	4
1.1.3 The Magnetic Susceptibility	8
1.2 The Hyperfine Shift	9
1.2.1 The Fermi-contact Shift	11
1.2.2 The Pseudocontact Shift	13
1.2.3 Simplified Expressions in Limiting Cases	17
1.2.4 The Effect of Partial Self-orientation	18
1.3 The Paramagnetic Residual Dipolar Couplings	20
1.4 The Paramagnetic Relaxation Enhancements	23
1.4.1 Dipolar Relaxation	25
1.4.2 Curie Spin Relaxation	29
1.4.3 Fermi-contact Relaxation	30
1.5 Paramagnetic Cross Correlation Effects	31
1.6 First Principles Calculation of Hyperfine Shifts	33
1.7 Metal Ion Dependence of the Paramagnetic Effects	34
1.8 The Overhauser Effect in Paramagnetic Systems	35
Acknowledgements	37
References	37

Chapter 2	Intrinsic and Extrinsic Paramagnetic Probes	42
	<i>Christoph Nitsche and Gottfried Otting</i>	
2.1	Natural Paramagnetic Centers in Biomolecules	42
2.1.1	Paramagnetic and Diamagnetic Metal Ions in Proteins	42
2.1.2	The Importance of a Diamagnetic Reference	44
2.2	Metal Substitution in Diamagnetic Metalloproteins	45
2.2.1	Examples of Metal Substitution	45
2.2.2	Paramagnetic Properties of Lanthanoid Ions	47
2.3	Chemical Methods for Introducing Paramagnetic Centers into Biomolecules	48
2.3.1	Tags for Paramagnetic Relaxation Enhancements	48
2.3.2	Tags for Generating Pseudocontact Shifts	49
2.4	Introducing Paramagnetic Centers in Biomolecules by Genetic Encoding	73
2.4.1	Metal-binding Unnatural Amino Acids	73
2.4.2	Fusion with Lanthanoid Binding Peptides	74
2.4.3	Fusion with Copper(II) and Nickel(II) Binding Peptides	74
2.4.4	Specific Non-covalent Binding of a Paramagnetic Reporter Protein	75
2.5	Conclusion and Prospects	75
	Acknowledgements	76
	References	76
Chapter 3	Structural and Dynamic Characterization of Protein Domains using Paramagnetic Data	85
	<i>James H. Prestegard and Monique J. Rogals</i>	
3.1	The Utility of Paramagnetic Effects	85
3.2	Implementation of Restraints from Paramagnetic Relaxation Enhancement	87
3.3	Implementation of Restraints from Pseudocontact Shifts	92
3.4	Implementation of Restraints from Field Induced Residual Dipolar Couplings	96
3.5	Application Involving Both PCs and RDCs	100
	References	103

<i>Contents</i>	xix
Chapter 4 Treating Biomacromolecular Conformational Variability	107
<i>Witold Andrałojć and Enrico Ravera</i>	
4.1 Introduction	107
4.2 Experimental Techniques	108
4.2.1 What Does an Experiment Really Observe?	108
4.2.2 Pseudocontact Shifts and Residual Dipolar Couplings from Self-alignment	109
4.2.3 Residual Dipolar Couplings from External Alignment	112
4.2.4 Relaxation Rates	112
4.2.5 Small Angle Scattering and Other Techniques	113
4.2.6 The Information Content of the Different Types of Average Data	114
4.3 Principles of Ensemble Averaging	119
4.3.1 Maximum Entropy	120
4.3.2 Largest Weight	121
4.3.3 A Comparison of Different Approaches	123
4.3.4 Some Examples	125
Acknowledgements	129
References	129
Chapter 5 Protein–Protein Interactions	134
<i>Marcellus Ubbink and Antonella Di Savino</i>	
5.1 Introduction	134
5.2 Protein–Protein Interactions	135
5.3 The New Toolbox	136
5.4 Tight Complexes: Breaking Symmetry	139
5.5 Ground States Structures of Protein Complexes	141
5.6 Dynamics and Encounter States	143
5.7 Examples of Applications	146
5.7.1 Breaking the Symmetry of the STAT4 Complex	146
5.7.2 Synaptotagmin-1–SNARE Complex	146
5.7.3 Cytochrome <i>f</i> and Plastocyanin	147
5.7.4 Cytochrome <i>f</i> and Cytochrome <i>c</i> ₆	148
5.7.5 Cytochrome <i>c</i> and Adrenodoxin	150
5.7.6 Cytochrome P450cam and Putidaredoxin	150
5.7.7 Ferredoxin, Ferredoxin:Thioredoxin Reductase and Thioredoxin	152

5.7.8	Cytochrome <i>c</i> Peroxidase and Cytochrome <i>c</i>	153
5.7.9	Enzyme I and the Histidine-containing Phosphocarrier Protein	154
5.7.10	NS2B–NS3 Protease	155
5.8	Conclusions and Perspective	156
	References	158
Chapter 6	Solid-state NMR of Paramagnetic Proteins	163
	<i>Andrea Bertarello and Guido Pintacuda</i>	
6.1	Introduction	163
6.2	Paramagnetic Effects and Solid-state NMR	164
6.2.1	Paramagnetic Relaxation Enhancement (PRE)	164
6.2.2	The Curie Spin and the Paramagnetic Shift Anisotropy	165
6.2.3	The Hyperfine Shift	166
6.3	Magic-angle Spinning	168
6.3.1	Slow Magic-angle Spinning	168
6.3.2	Fast Magic-angle Spinning	170
6.3.3	¹ H detection	173
6.4	Paramagnetic Effects as Long-range Structural Restrictions	176
6.4.1	Pseudocontact Shifts	176
6.4.2	Paramagnetic Relaxation Enhancements	178
6.5	Breaking into the Blind Sphere	179
6.5.1	Spin-echoed Acquisitions	179
6.5.2	Adiabatic Inversion and Refocusing Pulses	180
6.5.3	Heteronuclear Correlations	181
6.5.4	Infinite-speed MAS Spectra	182
6.5.5	A Case Study	182
6.6	Conclusions	184
	References	184
Chapter 7	Relaxometry and Contrast Agents	189
	<i>Silvio Aime, Eliana Gianolio and Alessandra Viale</i>	
7.1	Introduction	189
7.2	Basics of the Paramagnetic Relaxation Enhancement	192
7.2.1	Structural and Dynamic Determinants of the Observed Relaxivity	195

<i>Contents</i>	xxi
7.3 Applications of Paramagnetic Agents in MRI	200
7.3.1 Dynamic Contrast Enhanced MRI (DCE-MRI)	202
7.3.2 Molecular Imaging Targeting Reporters	204
7.3.3 Responsive Paramagnetic Probes	207
7.4 Conclusions	213
References	214
Chapter 8 Dynamic Nuclear Polarization	219
<i>Björn Corzilius</i>	
8.1 NMR Sensitivity and Spin Polarization	219
8.1.1 The Zeeman Polarization in Thermal Equilibrium	219
8.1.2 Sensitivity Enhancement by Paramagnetic Species	221
8.1.3 Hyperpolarization Methods	221
8.2 DNP Mechanisms	222
8.2.1 Overview	222
8.2.2 The Solid Effect	223
8.2.3 The Cross Effect	227
8.2.4 The Overhauser Effect	231
8.3 Polarizing Agents and DNP Profiles	234
8.3.1 Requirements of Polarizing Agents	234
8.3.2 DNP Field or Frequency Profiles	236
8.3.3 Radical-based Polarizing Agents	238
8.3.4 Paramagnetic Metal Ions	240
8.4 Application of DNP	242
8.4.1 Instrumentation	242
8.4.2 Many Nuclear Species to Polarize	245
8.4.3 Sample Preparation	246
8.4.4 DNP in Structural Biology	249
8.4.5 Conclusion and Outlook	250
Acknowledgements	251
References	251
Chapter 9 Paramagnetic NMR in Drug Discovery	258
<i>Erhan C. Cetiner and Harald Schwalbe</i>	
9.1 Introduction	258
9.1.1 Pharmacological Background	260
9.2 Ligand Screening	262
9.2.1 Relaxation Based Methods	262
9.2.2 Solvent Relaxation Method	264

9.2.3	DNP-enhanced Magnetisation Transfer Experiments	265
9.2.4	Summary	266
9.3	Paramagnetic Ligands	268
9.3.1	Identification and Characterisation of the Binding Site	268
9.3.2	Second Site Screening with Inter-ligand PRE	270
9.3.3	Paramagnetic Fragments as a Labelling Technique	272
9.4	Structural Insight on Ligand-Protein Complexes	273
9.4.1	Characterization of the Binding Site	274
9.4.2	Ternary Complexes	275
9.4.3	Structural Changes	276
9.4.4	Detection of Transient Interactions of Macromolecules	277
9.5	Conclusion	278
	Acknowledgements	279
	References	279
Chapter 10	Small Paramagnetic Co-solute Molecules	283
	<i>Tobias Madl and Frans A. A. Mulder</i>	
10.1	Introduction	283
10.2	Co-solute PRE Brought about by Translational and Rotational Modulation of the Nuclear Spin-Electron Spin Dipolar Interaction	285
10.3	Paramagnetic Co-solute Molecules	287
10.4	Consideration of Electron Spin Relaxation Times on Nuclear Paramagnetic Relaxation Enhancements	290
10.5	Applications of Co-solute PRE	291
10.5.1	Use of Co-solute PRE to Engender Faster Data Acquisition and Sensitivity Enhancement	291
10.5.2	Identification of Molecular Surfaces and Binding Interfaces in Macromolecular Complexes	292
10.5.3	Biomolecular Structure Determination	294
10.5.4	Determining Hydrophobic Sites in Proteins Using Dioxygen	298
10.5.5	Co-solute PRE in the Study of Conformational Dynamics	299

<i>Contents</i>	xxiii
10.5.6 Co-solute Pseudocontact Shifts	302
10.5.7 Small Co-solute Molecules in Applications with Lipids	303
10.6 Conclusion	304
Acknowledgements	304
References	305
Subject Index	310
