Chapter 1	Introduction to Electrolysis, Electrolysers and Hydrogen Production	1
	<i>Keith Scott</i>	
1.1	Introduction	1
1.2	Electrolysis and the Hydrogen Economy	3
1.3	Hydrogen Generation, Storage and Use	6
	1.3.1 Storage of Hydrogen	6
	1.3.2 Generation of Hydrogen	9
	1.3.3 Hydrogen as a By-product from Electrolysis	23
1.4	Conclusions	23
	References	26
Chapter 2	Alkaline Electrolysers	28
	<i>Robert Phillips, William J. F. Gannon and Charles W. Dunnill</i>	
2.1	Introduction	28
2.2	Electrochemical Performance	30
	2.2.1 Thermodynamics of Water Electrolysis	30
	2.2.2 Hydrogen Evolution Reactions	32
	2.2.3 Oxygen Evolution Reactions	33
2.3	Cell Potential for Water Electrolysis	34
2.4	Electrochemical Cell Efficiency	34
	2.4.1 Alkaline Electrolysis Cell Inefficiencies	36
	2.4.2 Electrocatalysis	37
2.5	Membranes and Their Requirements	39
2.6	Electrocatalysts for Water Decomposition	42

2.7	Cell Design and Stacking	43
2.7.1	Zero-gap Cell Design	45
2.7.2	Catalyst-coated Membrane (CCM)	52
2.7.3	Effect of Cell Design	54
2.8	Commercial Suppliers, Commercial Developments and Applications	55
2.9	Limitations, Challenges and Perspectives	56
	References	56
Chapter 3	Proton Exchange Membrane Water Electrolysers: Materials, Construction and Performance	59
	<i>T. Bystron, M. Paidar, T. Klicpera, M. Schuster and K. Bouzek</i>	
3.1	Introduction	59
3.2	Membranes	62
3.2.1	Brief Historical Background	62
3.2.2	Proton Exchange Polymeric Membranes Currently Used in PEMWE Processes	63
3.2.3	Membrane Selection with Respect to the Catalyst-coating Procedure	67
3.3	Electrocatalysts	68
3.3.1	Hydrogen Evolution Reaction Electrocatalysts	70
3.3.2	Oxygen Evolution Reaction Electrocatalysts	74
3.3.3	Electrocatalysts and Cell Component Modifications to Overcome Hydrogen Permeation	77
3.4	Cell and Stack Components and Materials	79
3.4.1	Porous Transport Layer	80
3.4.2	Bipolar Plates and Endplates	81
3.4.3	Electrolysis Cell and Stack Design	82
	References	85
Chapter 4	Electrochemical Reforming of Alcohols	94
	<i>José J. Linares, Carolina C. Vieira, João B. Costa Santos, Monah M. Magalhães, Jonathan R. N. dos Santos, Leandro L. Carvalho, Renan G. C. S. dos Reis and Flávio Colmati</i>	
4.1	Introduction	94
4.2	Methanol in Electrochemical Reforming for the Production of Hydrogen	100
4.2.1	Methanol Electro-oxidation in Acidic Medium	102
4.2.2	Methanol Electro-oxidation in Alkaline Medium	104

4.3	Ethanol in Electrochemical Reforming for Hydrogen Production	105
4.3.1	Ethanol Electro-oxidation in Acidic Medium	107
4.3.2	Ethanol Electro-oxidation in Alkaline Medium	110
4.4	Ethylene Glycol in Electrochemical Reforming for the Production of Hydrogen	111
4.4.1	Ethylene Glycol Electro-oxidation in Acidic Medium	114
4.4.2	Ethylene Glycol Electro-oxidation in Alkaline Medium	115
4.5	Glycerol in Electrochemical Reforming for Hydrogen Production	117
4.5.1	Glycerol Electro-oxidation in Acidic Medium	120
4.5.2	Glycerol Electro-oxidation in Alkaline Medium	122
4.5.3	Influence of the Support on the Glycerol Electro-oxidation in Alkaline Medium	123
4.6	Conclusions	125
	Acknowledgements	125
	References	125
Chapter 5	Solid Oxide Electrolysers	136
	<i>S. Y. Gómez and D. Hotza</i>	
5.1	Introduction	136
5.1.1	SOEC History in Brief	137
5.2	Underlying Concepts	138
5.2.1	SOECs Operation Principles	138
5.2.2	SOEC Thermodynamics	140
5.3	SOEC Electrochemical Performance	142
5.3.1	Reversible Potential	142
5.3.2	Losses and Overpotentials	144
5.3.3	Activation Overpotential	145
5.3.4	Concentration Overpotential	146
5.3.5	Mass Transport Limiting Current Density	149
5.3.6	Ohmic Overpotential	150
5.3.7	Reversible Potential and Actual Potential	150
5.4	SOEC Energy Performance	150
5.4.1	SOEC Efficiency	150
5.4.2	SOEC Exergy	152
5.4.3	SOFC Inheritance	153
5.5	O-SOEC and P-SOEC Components and Design	155
5.5.1	O-SOEC Electrolytes	155

5.5.2	P-SOEC Electrolytes	158
5.5.3	O-SOECs Fuel Electrodes	160
5.5.4	P-SOEC Fuel Electrodes	163
5.5.5	O-SOEC Oxygen Electrodes	164
5.5.6	P-SOEC Oxygen Electrodes	167
5.6	SOEC Challenges and Perspectives	170
5.6.1	Coupling SOEC with Other Renewables	170
5.6.2	Reversible Solid Oxide Fuel Cells	171
5.6.3	SOEC CO ₂ and H ₂ O Electrolysis	172
5.6.4	Summary	173
	Abbreviations	174
	References	175
Chapter 6	Alkaline Anionic Exchange Membrane Water Electrolysers	180
	<i>M. Mamlouk and M. Manolova</i>	
6.1	Introduction	180
6.2	Characterisation of an AAEMWE	182
6.2.1	Electrolyser Efficiency	183
6.3	AAEMWE Electrolyser System	183
6.3.1	Advantages of AAEMWE	184
6.4	AAEMWE System Components	187
6.4.1	Electrolyser Stack	187
6.4.2	Gas Liquid Separation and Water Management	188
6.4.3	Gas Purification	188
6.4.4	Power Conditioning and Management	189
6.4.5	Water Cooling and Heat Exchanger	189
6.4.6	Circulating Electrolyte	189
6.4.7	Operation Modes for AAEMWE	190
6.5	Performance Analysis and Limitations	191
6.5.1	Assumptions	194
6.6	AAEMWE Stack Configuration	198
6.6.1	Bipolar Plates	202
6.6.2	Endplates	203
6.6.3	Gaskets	204
6.6.4	Current Distributors and Catalytic Layers	205
6.6.5	Electrocatalysts	205
6.7	Membrane and Ionomer	223
6.7.1	AAEM Structure	224
6.7.2	Swelling Ratio and Mechanical Properties	225
6.7.3	Hydrogen Cross-over	226

6.7.4	Chemical Stability	227
6.7.5	Oxidation Stability	233
6.8	Membrane Electrode Assemblies	238
6.9	Challenges for AAEMWE and Future Directions	241
	References	244
Chapter 7	Intermediate Temperature Electrolysers	253
	<i>Jens Oluf Jensen, Christodoulos Chatzichristodoulou, Erik Christensen, Niels J. Bjerrum and Qingfeng Li</i>	
7.1	Introduction	253
7.1.1	The Advantages of Operating Electrolysers at Intermediate Temperature	254
7.1.2	Thermodynamics	254
7.1.3	Materials Issues	257
7.2	Alkaline Electrolysers at Intermediate Temperature	257
7.2.1	The Concept	259
7.2.2	Case Study	263
7.2.3	Challenges and Perspectives	266
7.3	Polymer Electrolyte Membrane Electrolysers at Intermediate Temperature	267
7.3.1	The Concept	267
7.3.2	Case Study	269
7.3.3	Challenges and Perspectives	274
7.4	Phosphate-based Systems	275
7.4.1	The Concept	275
7.4.2	Case Study	277
7.4.3	Challenges and Perspectives	278
7.5	Conclusion	280
	Acknowledgements	281
	References	281
Chapter 8	Other Polymer Membrane Electrolysis Processes	286
	<i>Dmitri Bessarabov</i>	
8.1	Polymer Electrolytes	286
8.1.1	Polymers in which Nitrogen Acts as a Mediator for Proton Conduction	287
8.1.2	Organically Modified Ceramic-type Polymers	288
8.1.3	Sulphonated Ion-conducting Polymers	289

8.1.4	Perfluorinated Carbon Chain Polymers	290
8.1.5	Perfluorinated Sulphonic Acid Polymer Electrolytes	290
8.2	Applications	291
8.2.1	Hydrogen Co-generation: Chlor-alkali Cells	292
8.2.2	Electrocatalytic Generation of Ozone and Hydrogen	293
8.2.3	Oxidation of Alcohols and Hydrogen Production	293
8.2.4	Anodic Electro-oxidation of SO ₂ and Hydrogen Production	294
8.3	Other PEM-based Electrocatalytic Processes	295
8.3.1	Synthesis of Dinitrogen Pentoxide	295
8.3.2	Separation of Hydrogen Isotopes	296
8.3.3	Water Treatment Using SPE Membrane Electrocatalytic Systems	296
8.3.4	Electrochemical Hydrogen Compression	296
8.3.5	Electro-induced Gas Separation	296
8.3.6	Electrochemical Hydrogenation of Olefinic Double Bonds	297
8.3.7	Electrochemical Coupling of SPE-based Water Electrolysis and Benzene Hydrogenation	297
8.3.8	Hydrogenation of Liquid Organics for Hydrogen Storage	298
8.3.9	Electrochemical Reduction of Benzaldehyde	300
8.3.10	Other SPE-based Electrochemical Processes: Alkoxylation Reactions of <i>N</i> -alkylamides	300
8.3.11	Ionic Polymer Metal Composites	300
8.4	Conclusions	302
	References	302
Chapter 9	Unitised Regenerative Fuel Cells	306
	<i>B. Shabani, R. Omrani, S. Seif Mohammadi, B. Paul and J. Andrews</i>	
9.1	Introduction	306
9.2	Types of URFC	310
9.2.1	Proton Exchange Membrane Unitised Regenerative Fuel Cell (PEM URFC)	310
9.2.2	Alkaline Unitised Regenerative Fuel Cell (A-URFC)	311

9.2.3	Solid Oxide Unitised Regenerative Fuel Cell (SO-URFC)	312
9.2.4	Microfluidic Unitised Regenerative Fuel Cell (M-URFC)	313
9.3	Performance of PEM URFCs	313
9.4	Membrane Electrode Assembly (MEA)	316
9.4.1	Membrane	316
9.4.2	Catalyst Layer	317
9.5	Gas Diffusion Layer (GDL)	322
9.6	Bipolar Plates (BPPs)	326
9.6.1	Overview	326
9.6.2	Bipolar Plates Design Considerations	326
9.7	Pressurisation	329
9.8	Stack Design	333
9.8.1	Overview	333
9.8.2	Stack Design Considerations	334
9.9	System Design	337
9.9.1	Overview	337
9.9.2	Hydrogen Storage	337
9.9.3	Thermal Management	339
9.9.4	Water Management	339
9.9.5	Control and Auxiliary Systems	340
9.10	Conclusion	341
	References	342

Chapter 10 Economics and Perspectives of Hydrogen Electroproduction Techniques 350

Genevieve Saur, Daniel A. DeSantis, Brian D. James, Cassidy Houchins and Eric Miller

10.1	Introduction	350
10.2	Techno-economic Analysis	351
10.2.1	Cost Analysis Considerations	352
10.2.2	Technology Description and Characterization	353
10.2.3	Cost Data Considerations	354
10.2.4	Scenario Development	354
10.2.5	Gathering Data	356
10.2.6	Sensitivity Analysis Considerations	356
10.3	Hydrogen Production Pathway Analysis	357
10.3.1	H ₂ A Production Model	358
10.3.2	H ₂ A Scenario Descriptions—Time Frames	359

10.3.3	H2A Scenario Descriptions—Plant Sizes	359
10.3.4	H2A Scenario Description—Costs	359
10.4	DOE H2A Case Studies	360
10.4.1	Steam Methane Reforming from Natural Gas	361
10.4.2	Coal Gasification	363
10.4.3	Biomass Gasification	368
10.4.4	Ethanol	371
10.4.5	Proton Exchange Membrane Electrolysis	373
10.4.6	Solid Oxide Electrolysis Cells	376
10.4.7	Photo-electrochemical	378
10.4.8	Solar Thermo-chemical Hydrogen	382
10.5	Cost Comparisons	385
10.6	Conclusion	388
	Acknowledgements	389
	References	389
Chapter 11	Conclusions: Electrolytic Hydrogen Production and Sustainable Routes	392
	<i>Keith Scott</i>	
11.1	Hydrogen Production	393
11.1.1	Biological and Biomass-based Hydrogen Production	395
11.1.2	Hydrogen <i>via</i> Electrolysis	398
11.2	Hydrogen Production by Photoelectrolysis	399
11.3	Sustainability and Economics of Hydrogen Production	399
11.4	Conclusions	401
	References	402
	Subject Index	405
