<b>Energy Sources and Supply Grids – The Growing Need for Storage</b>	<b>1</b>
<i>Peter Duffy, Colin Fitzpatrick, Thomas Conway and Robert P. Lynch</i>	
1 Introduction	2
2 Energy Sources	3
2.1 Generation of Electricity from Combustion of Fossil Fuels	3
2.2 Nuclear Power	7
2.3 Renewables: Solar, Wind, Wave, Tidal and Hydro	9
2.4 Geothermal, Combined Heat and Power, Biomass Combustion and Waste Incineration	13
3 Operation of Electricity Networks	16
3.1 Transmission Network	18
3.2 Distribution Network	19
3.3 Distributed Generation	19
3.4 Mini Grids	20
4 Stabilisation of the Electricity Grid	23
4.1 System Support Services	23
4.2 Impact of Renewables on Operation of Electricity Grid	25
4.3 Corrective Measures for Mitigating RoCoF	27
4.4 Demand-side Solutions and Smart Grids	28
4.5 Need for Energy Storage	30
5 Electric Vehicles and the Electricity Grids	31
5.1 Slow Charging	33
5.2 Fast Charging	33

---

Issues in Environmental Science and Technology No. 46  
Energy Storage Options and Their Environmental Impact  
Edited by R.E. Hester and R.M. Harrison  
© The Royal Society of Chemistry 2019

 <b>Electrochemical Energy Storage</b>		<b>115</b>
<i>D. Noel Buckley, Colm O’Dwyer, Nathan Quill and Robert P. Lynch</i>		
1	Introduction	116
1.1	Electrolytic and Voltaic Cells	116
1.2	Batteries, Fuel Cells and Flow Batteries	117
2	Lead–Acid Batteries	118
2.1	Fundamental Aspects of Lead–Acid Batteries	119
2.2	Electrodes	121
2.3	Cell Designs	122
2.4	Cycle Depth	124
2.5	Environmental Aspects	124

<i>Contents</i>	xi
3 Lithium and Lithium-ion Batteries	125
3.1 Basic Theory, Structure and Operation	125
3.2 Materials	127
3.3 Electrolytes	127
3.4 Separators	129
3.5 Sustainability of Lithium-ion Batteries	129
4 Other Battery Chemistries	130
4.1 Sodium–Sulfur Batteries	130
4.2 Nickel–Metal Hydride Batteries	131
5 Fuel Cells	131
5.1 Low-temperature Fuel Cells	132
5.2 High-temperature Fuel Cells	135
5.3 Fuel Cells for Energy Storage	136
5.4 Environmental Issues with Hydrogen Production and Distribution	137
6 Flow Batteries	138
6.1 Traditional Redox Flow Batteries: The All-vanadium Flow Battery	139
6.2 Hybrid Flow Batteries: The Zinc–Bromine Flow Battery	141
6.3 Slurry Flow Batteries: The All-iron Flow Battery	141
6.4 Other Flow Battery Systems	142
7 Summary and Conclusions	142

<b>Electrical Storage</b>	<b>150</b>
<i>Han Shao, Padmanathan Narayanasamy, Kafil M. Razeeb, Robert P. Lynch and Fernando M. F. Rhen</i>	
1 Introduction	150
2 Supercapacitor and Supercapattery	151
2.1 Basics of Energy Storage Devices	151
2.2 Pseudobattery-type Electrode Materials	156
2.3 Supercapattery Performance	163
2.4 Prospects and Future	165
3 Superconducting Magnetic Energy Storage (SMES)	166
3.1 Basic Aspects of SMES	166
3.2 State-of-the-Art, Trends and Challenges for SMES	167
4 Flywheels, Flywheel Batteries and Synchronous Condensers	169
4.1 Fundamental Theory of Mechanical Energy Storage	169
4.2 Basic Aspects of Flywheels	171
4.3 Basic Aspects of Synchronous Motors, Generators and Condensers	175
4.4 Current Trends and Challenges for Flywheels	177
References	179

<b>Photochemical Energy Storage</b>	<b>184</b>
<i>Gaia Neri, Mark Forster and Alexander J. Cowan</i>	
1 Introduction	184
2 Classes of Solar Fuels and Feedstocks	186
2.1 Sustainable H <sub>2</sub> Production	188
2.2 Sustainable Carbon Fuels Through CO <sub>2</sub> Reduction	189
3 Reaction Enhancement and Selectivity by Catalysis	192
4 Current Status of Light-driven Fuel Production	194
4.1 PV-driven Electrolysis of Water to Generate H <sub>2</sub>	194
4.2 PV-driven Electrolysis for CO <sub>2</sub> Reduction	196
4.3 Photochemical and Photoelectrochemical Cells	198
5 Summary and Conclusions	204
References	204
<b>Thermal and Thermochemical Storage</b>	<b>210</b>
<i>Yukitaka Kato and Takahiro Nomura</i>	
1 Introduction	210
2 Latent Heat Storage	211
2.1 Principle of LHS	211
2.2 Materials for LHS	212
2.3 Encapsulation and Composite Technology for LHS	212
2.4 Heat Exchangers for LHS	215
2.5 Applications of LHS	216
3 Thermochemical Energy Storage	219
3.1 Principle of TCES	219
3.2 Variety of TCES	222
3.3 Material and Reactor Technologies for TCES	223
3.4 Applications of TCES	225
3.5 Challenges and Barriers to Implementation	226
References	226
<b>Smart Energy Systems</b>	<b>228</b>
<i>Susana Paardekooper, Rasmus Lund and Henrik Lund</i>	
1 Smart Energy Systems	229
1.1 General Objectives	229
1.2 Reducing the Need for Fuels	230
1.3 Smart Electric, Thermal and Gas Grids	232
1.4 Coupling of Energy Sectors	233
2 Potential of Smart Energy Systems and Sector Coupling	236
2.1 IDA Energy Vision 2050	236

<i>Contents</i>	xiii
2.2 Smart Energy Europe	238
2.3 The Energy System Analysis Tool EnergyPLAN	240
3 The Need for Storage in a Smart Energy Systems Perspective	241
3.1 Assessment of Storage Needs: A Function of the Demands	241
3.2 Comparison of Costs for Different Storage Types	242
4 The Relevance of Storage in a Smart Energy System	247
4.1 Renewable Fuels	247
4.2 Large-scale Hydroelectric Storage	250
4.3 Local Electric Storage in Electric Vehicles	252
4.4 Thermal Storage	253
5 Conclusion	255

<b>Life-cycle Analysis for Assessing Environmental Impact</b>	<b>261</b>
<i>Heidi Hottenroth, Jens Peters, Manuel Baumann, Tobias Viere and Ingela Tietze</i>	
1 Introduction to Life-cycle Assessment	262
2 Life-cycle Assessment of Energy Storage Systems	263
3 Selection of Impact Indicators	264
4 Case Study 1: Life-cycle Assessment of Pumped Hydroelectric Storage and Battery Storage	267
4.1 Goal and Scope	267
4.2 Description of Compared Systems and Functional Equivalency	268
4.3 Underlying Data	269
4.4 Results	271
4.5 Sensitivity Analysis	273
4.6 Discussion	274
5 Case Study 2: Life-cycle Assessment of Different Lithium-ion Battery Chemistries for a Small-scale Energy System	276
5.1 Goal and Scope	276
5.2 Underlying Data	277
5.3 Results	280
5.4 Discussion	285
6 Case Study 3: Life-cycle Assessment of Energy Scenarios with Various Uses of Heat and Battery Storage for a Small-scale Energy System	286
6.1 Goal and Scope	286
6.2 Description of Compared Systems and Functional Equivalency	287
6.3 Underlying Data	288
6.4 Results	288
6.5 Discussion	290

7 Conclusion	291

<b>Business Opportunities and the Regulatory Framework</b>	<b>296</b>
<i>Reinhard Madlener and Jan Martin Specht</i>	
1 Introduction	297
2 Economic Value of Storage	301
2.1 Matching Technologies to Applications	301
2.2 Merit Order of Alternative Storage Options	305
2.3 Location and Energy Density of Storage Units	307
2.4 Optimal Sizing of Storage Units	308
2.5 Economic Impact of Aging of Batteries	309
2.6 Prosumer Concept	309
2.7 Energy Cloud Concepts	310
3 Value Creation for Business Models	310
3.1 Subsidies and Tariff Schemes	310
3.2 Economic Value from Energy (Self-) Supply	311
3.3 Economic Value from Ancillary Services	312
3.4 Economic Value from Arbitrage	314
3.5 Virtual Power Plants (VPPs) with Storage	316
4 Regulatory Considerations	319
5 Conclusion	320
