<b>Chapter 1</b>	<b>New Polymers From SuFEx Click Chemistry: Syntheses and Perspectives</b>	<b>1</b>
	<i>Long Xu, Peng Wu and Jiajia Dong</i>	
1.1	Introduction	1
1.1.1	Reactivity isn't Everything, It is the Only Thing	1
1.1.2	Accessibility and Capacity: Who is the Boss in the Market?	4
1.1.3	Functionality: It has to be Useful	5
1.2	Discovery of SuFEx Click Reaction	6
1.2.1	The Reviving of S(VI) Fluoride Chemistry with a New Name: SuFEx	6
1.2.2	Polysulfonates and Polysulfates: Just Waiting for a "Good Reaction" to Prepare Them	8
1.2.3	The Evolution of the SuFEx Catalyst: Inspired by an Old Review	12
1.2.4	The Ambiguous Mechanism Behind SuFEx-based Polycondensation	16
1.3	Applications of SuFEx Click Chemistry	17
1.3.1	Polymer Modifications	18
1.3.2	Synthesis of Polymers Using SuFEx Click Reactions	25
1.4	Summary and Outlook	28
	Acknowledgements	29
	References	30

<b>Chapter 2</b>	<b>Thiol Chemistry for Precision Polymer Synthesis</b>	<b>32</b>
	<i>Zhengbiao Zhang, Baolei Liu, Zhihao Huang, Yufang Zhong, Qiunan Shi and Xiulin Zhu</i>	
2.1	Releasing of the Thiol Group	32
2.1.1	Sodium Hydrosulfide	32
2.1.2	Thiourea	33
2.1.3	Thiodimethylformamide	34
2.1.4	Thioacetate	35
2.1.5	Methanethiosulfonate	35
2.1.6	RAFT Reagent	36
2.1.7	Thiolactone	38
2.2	High-efficiency Reaction of Thiol	38
2.2.1	Thiol-ene Click Reaction	38
2.2.2	Thiol-yne Click Reaction	42
2.2.3	Thiol-epoxy Click Reaction	43
2.2.4	Thiol-halide Nucleophilic Substitution Reaction	45
2.2.5	Formation of the Dynamic Covalent Bond (Disulfide Bond)	45
2.3	Thiol Chemistry for Precision Polymer Synthesis	47
2.4	Perspectives	60
	References	60
<b>Chapter 3</b>	<b>Precise Synthesis of Polyethylene-based Star Polymers: From Anionic Polymerization to Polyhomologation</b>	<b>65</b>
	<i>Zhen Zhang and Nikos Hadjichristidis</i>	
3.1	Introduction	65
3.2	Anionic Polymerization	67
3.2.1	Synthesis of Model Linear Polyethylenes	67
3.2.2	Synthesis of Model Star Polyethylenes	68
3.3	Polyhomologation	72
3.3.1	Post-polymerization Modification Methods	74
3.3.2	Design/Synthesis of Novel Borane Initiators	76
3.3.3	“Stitching” Reaction Method	81
3.4	Other Methods	83
3.4.1	Ring-opening Metathesis Polymerization (ROMP)	83
3.4.2	“Ethylene” Polymerization	83
3.5	Concluding Remarks	84
	Acknowledgements	85
	References	85

<b>Chapter 4</b>	<b>Fabrication of Supramolecular Polymers</b>	<b>89</b>
	<i>Bo Qin, Jiang-Fei Xu and Xi Zhang</i>	
4.1	Introduction	89
4.2	Driving Forces for Supramolecular Polymerization	90
4.2.1	Hydrogen Bonds	90
4.2.2	Metal-coordination Bonds	94
4.2.3	Host–Guest Interactions	97
4.2.4	Aromatic Donor–Acceptor Interactions	102
4.3	Topologies of Supramolecular Polymers	105
4.3.1	Supramolecular Dendrimers	105
4.3.2	Supramolecular Hyperbranched Polymers	105
4.3.3	Supramolecular Organic Frameworks	109
4.4	Controllable Fabrication of Supramolecular Polymers	111
4.4.1	Tuning the Rigidity of Monomers by Covalent and Noncovalent Methods	112
4.4.2	Fabricating Supramolecular Polymers by Covalent Polymerization of Supramonomers	115
4.4.3	Supramolecular Interfacial Polymerization	118
4.4.4	Seeded Living Supramolecular Polymerization	120
4.4.5	Chain-growth Supramolecular Polymerization from Metastable Monomers	120
4.5	Conclusions and Outlook	123
	References	124
<b>Chapter 5</b>	<b>Olefin (Co)polymerizations Enabled by Catalyst Design Based on Sidearm Strategy</b>	<b>129</b>
	<i>Jiao-Long Zhou, Xiao-Yan Wang, Xiu-Li Sun and Yong Tang</i>	
5.1	Introduction	129
5.2	Experimental	130
5.2.1	Materials	130
5.2.2	The Preparation of Ligands	130
5.2.3	The Preparation of the Complexes	131
5.2.4	General Procedure of Polymerization	134
5.2.5	Characterization	135
5.3	Results and Discussion	136
5.3.1	Catalytic Performance of the Complexes in Ethylene Polymerization	136
5.3.2	Copolymerization of Ethylene with $\alpha$ -olefin	139
5.3.3	Copolymerization of Ethylene with Cycloolefins	142

5.3.4	[O <sup>-</sup> N(H)X]TiCl <sub>3</sub> and the Ethylene Polymerization at High Temperature	147
5.3.5	Copolymerization of Ethylene with Polar Olefins	149
5.3.6	Applications of the Copolymers in Organic Synthesis	153
5.3.7	Miscellaneous	154
5.4	Conclusions	160
	Acknowledgements	161
	References	161
<b>Chapter 6</b>	<b>Bimetallic Complex Mediated <i>Meso</i>-epoxide Desymmetrization Copolymerization</b>	<b>167</b>
	<i>Xiao-Bing Lu</i>	
6.1	Introduction	167
6.2	Desymmetrization Copolymerization of <i>Meso</i> -epoxides and CO <sub>2</sub> (Scheme 6.2)	169
6.3	Desymmetrization Copolymerization of <i>Meso</i> -epoxides and COS (Scheme 6.6)	181
6.4	Desymmetrization Copolymerization of <i>Meso</i> -epoxides and Cyclic Anhydrides (Scheme 6.8)	187
6.5	Concluding Remarks	193
	Acknowledgements	194
	References	194
<b>Chapter 7</b>	<b>Carbon Dioxide Copolymer From Delicate Metal Catalyst: New Structure Leading to Practical Performance</b>	<b>197</b>
	<i>Han Cao and Xianhong Wang</i>	
7.1	Introduction	197
7.2	Mechanistic Considerations of CO <sub>2</sub> /Epoxide Copolymerization	201
7.2.1	Initiation	201
7.2.2	Propagation	203
7.2.3	Molecular Weight and Polydispersity	204
7.2.4	Ether Linkage vs. Carbonate Linkage	204
7.2.5	Cyclic Carbonate Byproduct	204
7.2.6	Chain Transfer	204
7.3	Monomer Scope	205
7.3.1	Industrially Viable Monomers	205
7.3.2	Monomers from Renewable Resources	208
7.3.3	Functionalized Monomer	208

7.4 Poly(Propylene Carbonate) – the Hope of CO <sub>2</sub> Based Copolymers	211
7.4.1 High-molecular-weight PPC with an Alternative Structure	212
7.4.2 High-molecular-weight PPC with Non-alternative Structure	223
7.4.3 Low-molecular-weight PPC with a Non-alternative Structure	224
7.4.4 Other Issues in PO/CO <sub>2</sub> Copolymerization	228
7.5 Summary and Outlook	233
Declaration of Interest	234
Acknowledgements	234
References	235
<b>Chapter 8 Chemosynthesis of Poly(<math>\epsilon</math>-Lysine) via Ring-opening Polymerization of Cyclic Lysine</b>	<b>243</b>
<i>Jiawei Lian, Jinlong Chen, Youhua Tao and Xianhong Wang</i>	
8.1 Introduction	243
8.2 Results and Discussion	247
8.2.1 Bulk Ring-opening Polymerization of $\epsilon$ -Lactam Monomer	247
8.2.2 Solution Ring-opening Polymerization of $\epsilon$ -Lactam Monomer	249
8.2.3 Structure Characterization and Mechanism Considerations	250
8.2.4 Deprotection	252
8.2.5 Pilot-scale Study	253
8.3 Conclusion	254
8.4 Experimental	256
8.4.1 Materials	256
8.4.2 Characterisation	257
8.4.3 Monomer Synthesis	257
8.4.4 Polymerization	259
8.4.5 Deprotection	259
8.4.6 Acetylation of Poly( $\epsilon$ -Lysine)	260
Acknowledgement	261
References	261
<b>Chapter 9 Fused (Hetero)Cyclic Polymers Synthesized by Alkyne-Based Polymerizations</b>	<b>264</b>
<i>Ting Han, Jacky W. Y. Lam and Ben Zhong Tang</i>	
9.1 Introduction	264
9.2 Synthesis of Fused Heterocyclic Polymers by Alkyne-based Polymerizations	267

9.2.1	Homopolymerizations of Acetylenic Monomers	267
9.2.2	Stoichiometric Polyannulations of Internal Diynes and Aromatics	270
9.2.3	Non-stoichiometric Polyannulations of Internal Diynes and Monofunctional Aromatics	276
9.2.4	Multicomponent Acetylenic Polymerizations	286
9.3	Properties and Functionalities	289
9.3.1	Thermal and Morphological Stability	289
9.3.2	Light Refraction and Chromatic Dispersion	291
9.3.3	Photoluminescence Properties	293
9.3.4	Fluorescent Chemosensor	295
9.3.5	External Stimuli-responsive Materials	297
9.4	Conclusions and Future Perspectives	299
	Acknowledgements	300
	References	301
<b>Chapter 10</b>	<b>Organocatalytic Synthesis of CO<sub>2</sub>(COS)-based Copolymers</b>	<b>307</b>
	<i>Jia-Liang Yang, Cheng-Jian Zhang and Xing-Hong Zhang</i>	
10.1	Introduction	307
10.1.1	Background of C1 Utilization	307
10.1.2	Metal Catalysts for C1/Epoxy Copolymerization	309
10.2	CO <sub>2</sub> /Epoxy Copolymerization	312
10.2.1	Alkyl (Aryl) Borane Lewis Base Pairs	312
10.2.2	Coupling of CO <sub>2</sub> with Oxetane by a Hydrogen Bond System	316
10.3	COS/Epoxy Copolymerization	318
10.3.1	Alkyl Borane Lewis Base Pairs	318
10.3.2	Thiourea/Lewis Base Pairs	321
10.3.3	Oxygen/Sulfur Exchange Reaction	325
10.4	Organocatalytic Synthesis of C1-based Block Copolymers	328
10.5	Supramolecular Anion for Controlled Polymerization	330
10.6	Properties of C1-based Polymers	334
10.7	Summary	337
	References	338
