

Contents

Chapter 1	Synthetic Materials in Medicine	1
1.1	Introduction	1
1.2	Surgical Uses of Biomaterials	3
1.2.1	Orthopaedic Joint Replacement	4
1.2.2	Tendons and Ligaments	8
1.2.3	Cardiovascular Implants	9
1.2.4	Ophthalmic Implants	11
1.2.5	Dentistry	13
1.2.6	Wound Dressings and Artificial Skin	16
1.2.7	Facial Implants	18
1.2.8	Breast Implants	18
1.2.9	Ear Ossicles	19
1.3	Conclusions	20
	References	20
Chapter 2	Polymers	24
2.1	Polyethylene	24
2.1.1	Polyethylene for Orthopaedics	25
2.1.2	Wear of UHMWPE	32
2.1.3	Crosslinked UHMWPE	35
2.1.4	Knee Replacement	36
2.1.5	Polyethylene for Facial Skeletal Defects	37
2.1.6	Hydroxyapatite-filled Polyethylene	37
2.2	Acrylic Bone Cements	39
2.2.1	Acrylic Bone Cements Containing Other Components	41

Biomaterials Science Series No. 7

The Chemistry of Medical and Dental Materials, 2nd Edition

2.3	Degradable Polymers	41
2.3.1	Reinforced Degradable Polymers	44
2.4	Polyurethanes	45
2.5	Hydrogels	45
2.5.1	Hydrogels and Other Polymers in Ophthalmology	46
2.6	Silicone-based Implants	50
	References	51
Chapter 3	Ceramics	60
3.1	Introduction	60
3.2	Ceramics in Medicine	61
3.3	Calcium Phosphates	62
3.3.1	Chemistry	62
3.3.2	Mechanical Properties of Calcium Phosphate Cements	67
3.3.3	Calcium Phosphates in the Body	67
3.3.4	Apatite Chemistry	69
3.3.5	Summary of Calcium Phosphate Cements	71
3.3.6	Calcium Phosphate Coatings	72
3.3.7	Biological Interactions of Calcium Phosphate Coatings	76
3.4	Porous Hydroxyapatite Implants	78
3.5	Dense Hydroxyapatite Implants	80
3.5.1	Interaction of Dense Hydroxyapatite with the Body	81
3.6	Bioactive Glasses	82
3.6.1	The Chemistry of the Bone–Bioactive Glass Interaction	83
3.6.2	Tissue Response to Bioactive Glasses	86
3.6.3	Clinical Applications of Bioactive Glasses	87
3.6.4	Other Potential Applications of Bioactive Glasses	88
3.7	Apatite/Wollastonite Glass-ceramics	88
3.8	Alumina	90
3.9	Zirconia	91
3.10	Pyrolytic Carbon	92
	References	95
Chapter 4	Metals	104
4.1	Introduction	104
4.2	Metal Ions in the Body	107

4.3	Cobalt–Chromium Alloys	109
4.3.1	Metal-on-metal Hip Joints	109
4.3.2	Biological Reactions to Cobalt–Chromium Alloys	111
4.4	Stainless Steel	112
4.4.1	Biocompatibility of Stainless Steel	113
4.5	Titanium and Its Alloys	114
4.5.1	Surgical Uses of Titanium and Its Alloys	115
4.5.2	Surface Chemistry of Titanium and Its Alloys	117
4.5.3	Wear Behaviour of Titanium and Its Alloys	118
4.5.4	Other Surface Modification Techniques for Titanium and Its Alloys	119
4.5.5	Biocompatibility of Titanium and Its Alloys	120
4.5.6	Clinical Applications of Titanium and Its Alloys	123
4.6	Precious Metals and Their Alloys	125
4.7	Dental Amalgam	127
4.7.1	Dental Amalgams and the Minamata Convention	130
4.7.2	Magnesium Alloys	132
	References	133
Chapter 5	Dental Materials	141
5.1	Introduction	141
5.2	Composite Resins	143
5.2.1	Curing of Composites	144
5.2.2	Soft-start Polymerization	147
5.2.3	Fillers	147
5.2.4	Pigments	149
5.2.5	Bonding of Composite Resins to the Tooth	149
5.2.6	Surface Preparation	150
5.2.7	Dentine Bonding Agents	150
5.2.8	Etch-and-rinse Systems	152
5.2.9	Self-etch Systems	153
5.2.10	Universal Bonding Agents	153
5.2.11	Clinical Performance of Composite Resins	153
5.2.12	Alternative Composite Resin Systems for Dentistry	155
5.2.13	Ormocers	155
5.2.14	Siloranes	156
5.2.15	Giomers	157

5.3	Cements	157
5.3.1	Basic Types and Uses	157
5.3.2	Cements Based on Zinc Oxide	158
5.4	Glass-ionomers	160
5.4.1	Ion Release from Glass-ionomer Cements	165
5.4.2	Biocompatibility	167
5.4.3	Clinical Performance	167
5.4.4	Resin-modified Glass-ionomers	168
5.4.5	Adhesion to Dentine and Enamel by Glass-ionomer Cements	170
5.4.6	Metal-containing Glass-ionomers	171
5.5	Polyacid-modified Composite Resins	172
5.6	Prosthetic Materials	172
5.7	Endodontic Materials	173
5.8	Orthodontic Materials	174
	References	175
Chapter 6	Biological Interactions with Materials	185
6.1	Introduction	185
6.2	Biocompatibility	186
6.3	Toxicity	189
6.4	Cytotoxicity	190
6.5	Hypersensitivity	192
6.6	Carcinogenicity	194
6.7	Interaction of Materials with Soft Tissues	196
6.7.1	Inflammation	196
6.7.2	Granulation Tissue Formation	198
6.7.3	Foreign-body Reaction	198
6.7.4	Fibrosis	199
6.8	Interaction with Blood	199
6.8.1	Modification of Blood–Biomaterial Interactions by Heparin	204
6.9	Interactions with Proteins	205
6.9.1	The Vroman Effect	208
6.10	Cell Adhesion	209
6.10.1	Adhesion of Osteoblasts	210
6.11	Interactions with Hard Tissues	211
6.11.1	Osseointegration	213
6.11.2	Fibrous Capsule Formation	214
6.12	Safety Testing of Biomaterials	214
	References	216

<i>Contents</i>	xiii
Chapter 7 Tissue Engineering	224
7.1 Introduction	224
7.1.1 Scope of Tissue Engineering	225
7.2 Tissue-engineering of Skin	226
7.3 Tissue-engineering of Articular Cartilage	226
7.4 Tissue-engineering of Bone	228
References	229
Chapter 8 Ethical Perspectives in Biomaterials Science	231
8.1 Introduction	231
8.2 The Use of Animals in Research	232
8.3 Human Research	234
8.4 Bodily Augmentation	236
8.5 Tissue Engineering	238
8.6 Research Ethics and Scientific Fraud	238
8.7 Ethics of Publication in Biomaterials Science	239
8.8 Regulatory Control of the Use of Biomaterials and Devices	242
8.9 Conclusions	243
References	244
Subject Index	246
