

Contents

Chapter 1	Past, Present and Future of Green Analytical Chemistry	1
	<i>Miguel de la Guardia and Salvador Garrigues</i>	
1.1	Green Analytical Chemistry Data	1
1.2	The Reasons for the Success of GAC	6
1.3	Theoretical Developments in GAC	9
1.4	Practical Application of GAC	10
1.5	The Future: A Democratic Analytical Chemistry Paradigm?	11
	References	15
Chapter 2	Direct Analysis by Green Spectroscopy and Spectrometry	19
	<i>Salvador Garrigues and Miguel de la Guardia</i>	
2.1	Introduction	19
2.2	Versatility of Spectroscopic and Spectrometric Techniques	22
2.3	Direct Analysis after Physical Treatment	23
2.3.1	Arc and Spark Optical Emission Spectrometry	23
2.3.2	Electrothermal Atomic Absorption Spectrometry	24
2.3.3	Glow Discharge	25
2.3.4	Laser Ablation	27
2.3.5	Laser-induced Breakdown Spectroscopy	29
2.3.6	Desorption Electrospray Ionization	31
2.4	Non-invasive Methods of Analysis	33

Green Chemistry Series No. 66

Challenges in Green Analytical Chemistry: 2nd Edition

Edited by Salvador Garrigues and Miguel de la Guardia

Published by the Royal Society of Chemistry, www.rsc.org

2.5	Direct Analysis of Solid and Liquid Samples Without Sample Damage	35
2.5.1	Mineral Analysis by X-ray Techniques	36
2.5.2	Molecular Analysis by NMR Spectroscopy	36
2.5.3	Molecular Analysis by Vibrational Spectroscopy	37
2.6	Image Processing Methods	41
2.7	Remote Sensing and Teledetection Systems	44
	References	49
Chapter 3	Sensors as Green Tools	55
	<i>Manel del Valle</i>	
3.1	Chemical Analysis Performed with Sensors	55
3.2	Use of Nanoparticles for Sensing	61
3.2.1	Use of Metal and Metal Oxide Nanoparticles	61
3.2.2	Use of Carbon Dots	63
3.3	Colorimetric Sensing with a Smartphone Camera	65
3.4	Electrochemical Biosensors Using a Portable Glucometer	72
3.5	The Biofuel Cell Used for Sensing	77
3.6	Smart Systems: Electronic Noses and Electronic Tongues	80
	Acknowledgements	87
	References	87
Chapter 4	Innocuous and Less Hazardous Reagents	92
	<i>Douglas E. Raynie</i>	
4.1	Green Solvents and Reagents: What This Means	93
4.2	Greener Solvents	94
4.2.1	Supercritical Fluids	95
4.2.2	Ionic Liquids	96
4.2.3	Water	97
4.2.4	Green Organic Solvents	99
4.3	Greener Reagents	106
4.3.1	Chelating Agents	106
4.3.2	Derivatization	107
4.3.3	Preservatives	108
	References	110

Chapter 5	Greening Sample Preparation: New Solvents, New Sorbents	114
	<i>Lourdes Ramos</i>	
5.1	Introduction	114
5.2	Solvent-based Extraction Techniques	115
5.2.1	Single-drop Microextraction	116
5.2.2	Hollow Fibre-protected Two/Three-phase Solvent Microextraction	123
5.2.3	Dispersive Liquid-Liquid Microextraction	125
5.3	Sorbent-based Extraction Techniques	129
5.3.1	Miniaturized Solid-phase Extraction	129
5.3.2	Microextraction by Packed Sorbent	133
5.3.3	Miniaturized Dispersive Solid-phase Extraction	134
5.3.4	Solid-phase Microextraction	137
5.3.5	Stir-bar Sorptive Extraction	141
5.4	Conclusion	145
	Acknowledgements	146
	References	146
Chapter 6	Flow Analysis: A Powerful Tool for Green Analytical Chemistry	154
	<i>Fábio R. P. Rocha, Wanessa R. Melchert and Boaventura F. Reis</i>	
6.1	Introduction	154
6.2	Flow Systems	155
6.2.1	Segmented Flow Analysis	155
6.2.2	Flow Injection Analysis	156
6.2.3	Sequential Injection Analysis	156
6.2.4	Monosegmented Flow Analysis	157
6.2.5	Multicommutation and Multipumping Approaches	157
6.2.6	Flow-batch Analysis	158
6.2.7	Multisyringe Approach	159
6.3	Reduction of Waste Generation by System Design	159
6.4	Contributions of Flow-based Procedures to Green Analytical Chemistry	161
6.4.1	Reagentless Analytical Procedures	161
6.4.2	Replacement of Hazardous Chemicals	162
6.4.3	Reuse of Chemicals	166

6.4.4	Minimization of Reagent Consumption and Waste Generation	167
6.4.5	Waste Treatment	174
6.5	Conclusions and Trends	175
	References	176
Chapter 7	(Bio)electroanalysis in the Field of Greener Analytical Chemistry	181
	<i>Paloma Yáñez-Sedeño, Susana Campuzano and José Manuel Pingarrón</i>	
7.1	Introduction	181
7.2	Electrodes and Electrochemical Sensors	182
7.2.1	Alternatives to Mercury Electrodes	182
7.2.2	Novel Eco-inspired Electrode Materials	185
7.2.3	Green (Bio)sensors	194
7.3	Solvents	199
7.3.1	Ionic Liquids	199
7.3.2	Deep Eutectic Solvents	202
7.3.3	Supercritical Fluids	203
7.4	Techniques	204
7.4.1	Continuous Detection	204
7.4.2	Microsystems	206
7.5	Conclusions and Future Trends	208
	References	209
Chapter 8	Green Solvents for Analytical Chemistry	221
	<i>Anne-Sylvie Fabiano-Tixier, Harish Karthikeyan Ravi, Boutheina Khadhraoui, Sandrine Perino, Maryline Abert-Vian, Cyrille Santerre, Nadine Vallet and Farid Chemat</i>	
8.1	Introduction	221
8.2	Decision Support Tools for the Choice of Alternative Solvents	222
8.2.1	Solubility Prediction Methods According to Hansen Solubility Parameters	222
8.2.2	COSMO-RS Approach	224
8.3	Solvent-free Microwave Extraction (SFME)	227
8.4	Supercritical Fluids	230
8.5	Liquefied Gases	235
8.6	Subcritical Water: A Green Solvent for Analytical Chemistry	238

<i>Contents</i>	xix
8.7 NADESs as Green Solvents for Analytical Chemistry	240
8.7.1 Green Solvents from Ionic Liquids (ILs) and Deep Eutectic Solvents (DESS) to Natural Deep Eutectic Solvents (NADESs)	240
8.7.2 Preparation of NADESs	242
8.7.3 Applications of NADESs	242
8.8 Bio-based Solvents	243
8.9 Future Perspectives	248
References	248
Chapter 9 Green Chromatography: State-of-the-art, Opportunities and Future Perspectives	255
<i>Justyna Plotka-Wasyłka, Magdalena Fabjanowicz, Kaja Kalinowska and Jacek Namieśnik</i>	
9.1 Introduction	255
9.2 Direct Chromatographic Analysis	257
9.3 Portable Chromatographs and On-line and At-line Process Analysers	259
9.4 Green Aspects of Gas Chromatography	260
9.4.1 Instrumental Modifications	261
9.4.2 Multidimensional Gas Chromatography	264
9.5 Green Aspects of Liquid Chromatography	265
9.5.1 Column-related Parameter Fitting	265
9.5.2 Temperature	267
9.5.3 Green Alternatives for Mobile Phases	268
9.5.4 Two-dimensional Liquid Chromatography	271
9.6 Miniaturization in Chromatography	272
9.7 Conclusions and Future Trends	273
References	275
Chapter 10 Chemometrics as a Green Analytical Tool	277
<i>Kanet Wongravee, Mika Ishigaki and Yukihiro Ozaki</i>	
10.1 Introduction	277
10.2 Brief History of Chemometrics in Green Chemistry and Its Application to Green Analytical Chemistry	280
10.3 Complexity of Datasets	293
10.4 Methodology of Chemometrics	294
10.4.1 Design of Experiments (DOE)	294
10.4.2 Pre-processing Methods	295
10.4.3 Unsupervised Pattern Recognition	298
10.4.4 Supervised Pattern Recognition	307

10.5	Applications of Chemometrics in Optical Chemical Sensors	311
10.6	Some Examples of Applications of Spectroscopy–Chemometrics Research	316
10.6.1	Moving Window Partial Least-squares Regression (MWPLSR) and Its Application to <i>In Vivo</i> Non-invasive Monitoring of Blood Glucose by Near-infrared Diffuse Reflectance Spectroscopy	316
10.6.2	Near-infrared (NIR) Electronic Spectroscopy Study of a Calcination Reaction of Highly Reflective Green–Black (HRGB) Pigments	324
10.6.3	Raman Imaging Study of the Lycopene Aggregation <i>In Vivo</i> in Tomato	327
	References	330
Chapter 11	Evaluation of the Greenness of Analytical Procedures	337
	<i>Marta Bystrzanowska, Jacek Namieśnik and Marek Tobiszewski</i>	
11.1	Introduction	337
11.2	Introduction to a Case Study	339
11.3	Assessment of Procedures by Scoring	343
11.3.1	NEMI Approach	343
11.3.2	Eco-scale	344
11.3.3	Other Scoring Approaches	346
11.3.4	Scoring Case Studies	346
11.4	Comparative Assessment of Procedures	346
11.4.1	TOPSIS	350
11.4.2	PROMETHEE Algorithm	351
11.4.3	Alternatives	352
11.4.4	Assessment Criteria	353
11.4.5	Weighting of Criteria	354
11.4.6	Input Data	354
11.4.7	Results of TOPSIS Analysis	354
11.4.8	PROMETHEE II Analysis	355
11.4.9	Comparison of Obtained Results	356
11.5	Assessment of Analytical Reagents and Solvents	358
11.5.1	Solvents	359
11.5.2	Acids and Bases	360
11.5.3	Derivatization Agents	363
11.6	Conclusion	365
	References	366
	Subject Index	370
