Chapter 1	Diabetes and Obesity: An Overview of Nutritional Effects	1
	<i>Sonia De Alwis and Michael A. Via</i>	
1.1	Introduction	1
1.2	Mechanisms of Insulin Resistance and Metabolic Syndrome	2
1.3	Prevention Trials	3
1.4	Adherence	6
1.5	Dietary Components Affecting T2D	7
1.5.1	Fructose	7
1.5.2	Fiber	8
1.5.3	Glycemic Index and Load	8
1.5.4	Dietary Fat	9
1.6	Dietary Interventions in T2D	9
1.6.1	Mediterranean Diet	9
1.6.2	The New Nordic Diet	11
1.6.3	The Ornish Diet	12
1.6.4	Ketogenic Diet	12
1.7	Micronutrients	15
1.7.1	Chromium	15
1.7.2	Selenium	16
1.7.3	Vitamin D	16
1.7.4	Cinnamon	17

Nutritional Signaling Pathway Activities in Obesity and Diabetes
 Food Chemistry, Function and Analysis No. 24
 Edited by Zhiyong Cheng

 Published by the Royal Society of Chemistry, www.rsc.org

1.8	Plant Alkaloids	18
1.9	Future Directions	19
	References	19
Chapter 2	Maternal Nutrition and the Risk of Obesity and Diabetes in the Offspring	24
	<i>C. M. Reynolds, P. E. Bridge-Comer and M. H. Vickers</i>	
2.1	Introduction	24
2.2	Evidence from Epidemiology and Human Studies	25
2.3	Evidence from Experimental Animal Models	28
2.3.1	Global Nutrient Restriction	28
2.3.2	Protein Restriction	29
2.3.3	Maternal Obesity	30
2.3.4	Micronutrient Deficiencies	31
2.3.5	Other Models	32
2.4	Epigenetic Mechanisms	33
2.5	Intervention Strategies	36
2.6	Conclusions	38
	References	40
Chapter 3	Lessons Learned from Recent Clinical Trials Targeting Diets to Treat and Prevent Obesity and Diabetes	48
	<i>N. S. Wright</i>	
3.1	Introduction	48
3.2	Current Issues in Diabetes and Obesity Research	50
3.3	Results from Reviews on Obesity and Diabetes	51
3.3.1	Limitations of Interpreting Review Data	51
3.3.2	Low-fat Diets	59
3.3.3	Low-carbohydrate Diets	63
3.4	Challenges with Diets as Interventions and Suggestions for the Future	64
3.5	Summary	65
	Acknowledgement	66
	References	66
Chapter 4	Nutritional Regulation of Inflammation in Obesity and Diabetes	71
	<i>Xin Wang and Jian Liu</i>	
4.1	Introduction	71

<i>Contents</i>	ix
4.2 Nutritional Regulation of Adipocytes in Obesity and Type 2 Diabetes	74
4.3 Nutritional Regulation of Nutrition on Immune Cells in Obesity and Type 2 Diabetes	76
4.4 Nutritional Regulation of Inflammatory Signaling Pathways in Obesity and Type 2 Diabetes	77
4.4.1 5' Adenosine Monophosphate-activated Protein Kinase (AMPK) as a Central Energy Sensor	77
4.4.2 NF- κ B Signaling Pathways as an Inflammatory Switch	80
4.4.3 AMPK-SIRT1-NF- κ B Signaling Pathway	80
4.4.4 AMPK-FOXOs-NF- κ B Signaling Pathway	81
4.4.5 PGC-1 α /PPAR γ -NF- κ B Signaling Pathway	82
4.4.6 mTOR Signaling Pathway	83
4.4.7 The Roles of TLRs and NLRPs in Inflammation	84
4.5 Conclusion	85
References	86
Chapter 5 The Interaction of Nutrition with Nuclear Receptors in Obesity and Diabetes	94
<i>Claudia Tovar-Palacio, Lilia G. Noriega, Ivan Torre Villalvazo, Andrea Díaz-Villaseñor and Berenice Palacios-González</i>	
5.1 Introduction	94
5.2 Metabolic Nuclear Receptors	95
5.2.1 The Interaction of Nutrition with Nuclear Receptors	97
5.2.2 Interaction of Nutrients with Metabolic Nuclear Receptors in Different Tissues During Obesity and Diabetes	98
5.3 Intestine	98
5.3.1 Physiological Role of FXR on Bile Acid (BA) Homeostasis and Hormone Secretion in the Intestine	99
5.3.2 Physiological Role of LXRs on Reverse Cholesterol Transport in the Intestine	99
5.3.3 Dysfunctional Interplay Between the Intestine and Microbiota During Obesity and Diabetes Through FXR and PPARs	100

5.3.4	Restoration of Intestine Dysfunction by Nutrients and Phytochemicals Through Attenuation of Gut Dysbiosis	103
5.4	The Liver	104
5.4.1	Physiological Role of PPAR α , HNF4 α , LXR, FXR, and PXR Receptors in the Liver	105
5.4.2	Hepatic Metabolic Disorders by Macronutrients During Obesity and Diabetes	108
5.4.3	Restoration of Hepatic Metabolic Homeostasis by Dietary Components Through the Activation of Metabolic Nuclear Receptors	111
5.4.4	Dietary Supplements and Liver Damage	113
5.5	White and Brown Adipose Tissue	113
5.5.1	Physiological Role of PPARs and LXR in White and Brown Adipose Tissue	114
5.5.2	Adipose Tissue Dysfunction by Macronutrients and Vitamins Through PPARs	116
5.5.3	Restoration of Adipose Tissue Dysfunction by Macronutrients and Other Compounds Through PPARs	118
5.5.4	Adipose Tissue Dysfunction by Macronutrients Through LXR α	125
5.5.5	Restoration of Adipose Tissue Dysfunction by Lipids and Other Compounds Through LXR α	125
5.6	Skeletal Muscle	125
5.6.1	Physiological Role of PPARs, LXR, ER, and ERRs in Skeletal Muscle	126
5.6.2	Skeletal Muscle Dysfunction by Macronutrients Through PPARs, LXR, ER, and ERRs	128
5.6.3	Restoration of Insulin Resistance by Macronutrients, Vitamins, and Other Compounds Through PPARs, LXR, ER, and ERRs	129
5.7	Kidney	131
5.7.1	Physiological Role of PPARs, LXR, FXR, and VRL in the Kidney	131

5.7.2	Kidney Tissue Dysfunction by Macronutrients and Vitamin D Deficiency Through PPARs, LXR, FXR, and VRL	138
5.7.3	Restoration of Kidney Tissue Dysfunction by Macronutrients and Other Components Through PPARs, LXRs, FXR, and VDR	140
5.8	Conclusion and Perspectives	142
	Abbreviations	143
	References	146
Chapter 6	Nutritional Regulation of Mitochondrial Health and Its Implication in Treating Obesity and Diabetes: Lessons Learned From the Resveratrol–Sirt1 Axis	164
	<i>Z. Tao, L. Shi and Z. Cheng</i>	
6.1	Introduction	164
6.2	Sirt1 in Metabolic Regulation	166
6.2.1	Sirt1 in Adipose Tissue	166
6.2.2	Sirt1 in Muscle	168
6.2.3	Sirt1 in Liver	169
6.2.4	Sirt1 in Heart	169
6.2.5	Sirt1 in Brain	170
6.3	The RSV–Sirt1 Axis in Mitochondrial Regulation	171
6.3.1	Mitochondrial Biogenesis	171
6.3.2	Mitochondrial Autophagy (Mitophagy)	173
6.4	The RSV–Sirt1 Axis Regulates Metabolism <i>via</i> Autophagy/Mitophagy	173
6.4.1	Immunometabolism and Inflammation	174
6.4.2	Aging	176
6.4.3	Adiposity	177
6.4.4	Cardiovascular Health	178
6.4.5	Hepatic Metabolism	179
6.4.6	Renal Health	182
6.5	Conclusion	182
	Acknowledgments	183
	References	183
Chapter 7	The Role of Intestinal Microbiota and Microbial Metabolites in the Development of Host Metabolic Syndrome	191
	<i>Veronica Lazar, Iulia Magdalena Vasilescu, Alina Maria Holban and Mariana Carmen Chifiriuc</i>	

7.1	Introduction	191
7.2	Metabolic Syndrome	192
7.2.1	Risk Factors	192
7.2.2	Pathophysiological Mechanisms	194
7.3	Gut Microbiota and Metabolic Health	196
7.4	Role of Microbial Metabolites in the Development of Host Metabolic Syndrome	200
7.4.1	Short-chain Fatty Acids	200
7.4.2	Amino Acids	200
7.4.3	Microbial Lipopolysaccharides and Inflammation in Metabolic Syndrome	201
7.5	Therapeutic Interventions Targeting the Gut Microbiota Detrimental Metabolic Activities	203
7.6	Conclusions	204
	References	205
Chapter 8	Metabolomics in Nutritional Metabolism, Obesity, and Diabetes	210
	<i>L. Bervoets and P. Adriaenssens</i>	
8.1	Introduction	210
8.2	NMR-based Metabolomics	212
8.2.1	Sample Collection and Preparation	213
8.2.2	¹ H NMR Spectroscopic Analysis	215
8.2.3	Statistical Data Analyses	217
8.3	Application of Metabolomics in Obesity Research	218
8.3.1	Metabolic Profiling of Paediatric Obesity	219
8.3.2	Metabolic Subtyping of Paediatric Obesity	225
8.4	Application of Metabolomics in Diabetes Research	227
8.4.1	Metabolic Profiling of Type 1 Diabetes	227
8.5	Summary and Future Perspectives	230
	Acknowledgements	231
	References	231
Chapter 9	Proteomics in Nutrition, Obesity and Diabetes Research	237
	<i>P. Ruiz-Limon, M. Balongo, M. Insenser, F. J. Tinahones and M. Murri</i>	
9.1	Introduction	237
9.2	Proteomics Technologies for Nutritional Signaling	239

<i>Contents</i>	xiii
9.2.1 Gel-based Techniques Used in Nutrition, Obesity and Diabetes Research	240
9.2.2 Gel-free Techniques Used in Nutrition, Obesity and Diabetes Research	241
9.3 Proteomics Studies on the Effect of Food Supplement in Health Status	243
9.4 Proteomics Studies on Nutritional Signaling Activities in Obesity	247
9.4.1 Protein Description	253
9.5 Proteomics Studies on Nutritional Signaling Activities in Diabetes	261
9.6 Future Perspectives	262
References	263
Chapter 10 Personalized Nutrition to Treat and Prevent Obesity and Diabetes	272
<i>Arturo Panduro, Sonia Roman, Ricardo G. Milán, Luis Alberto Torres-Reyes and Karina Gonzalez-Aldaco</i>	
10.1 Obesity and Type 2 Diabetes: An Interaction Between Genes and Environmental Factors	272
10.2 Taste Perception, Carbohydrate Digestion, Gut Microbiota, and Food Reward	275
10.2.1 Taste Perception	276
10.2.2 Carbohydrate Digestion	278
10.2.3 Gut Microbiota	279
10.2.4 Food Reward and DRD2	280
10.3 Lipid Metabolism	281
10.3.1 FABP2	281
10.3.2 APOB	282
10.3.3 APOE	282
10.3.4 ABCA1	283
10.3.5 FTO/alpha-ketoglutarate Dependent Dioxygenase	283
10.4 Epigenetics	284
10.5 What is Next in Personalized Nutrition to Prevent Obesity and Type 2 Diabetes?	285
Abbreviations	287
References	288

Chapter 11 Allometric Scaling of Dietary Bioactives in Metabolic Research: The Present and Future	295
<i>Jay Whelan</i>	
11.1 Introduction	295
11.2 Contributing Factors Using Rodents that Impede Reproducibility of Results in Humans	296
11.3 Allometric Scaling in Biology	297
11.3.1 Allometric Scaling Models	298
11.3.2 Comparison of the Different Allometric Scaling Models	300
11.4 Summary	306
References	307
Subject Index	310
