

Contents

Chapter 1	Design of Advanced Catalysts for Natural Gas Reforming Reactions	1
	<i>A. C. Roger and K. Parkhomenko</i>	
1.1	Introduction	1
1.2	Natural Gas as an Energy Resource	1
1.3	Thermodynamic Aspects of Natural Gas Reforming	3
1.4	Challenges for Reforming Catalysts: Overcoming Coking and Sintering	5
	1.4.1 Catalytic Material Modifications	6
	1.4.2 Engineering Solutions	10
1.5	Conclusion	12
	References	13
Chapter 2	Natural Clay Minerals for Hydrocracking Reactions	16
	<i>Jahaziel Amaya, Sonia Moreno and Rafael Molina</i>	
2.1	Introduction	16
2.2	Catalytic Hydrocracking	18
	2.2.1 Catalytic Hydrocracking Chemistry of Materials	18
2.3	Catalysts for Hydrocracking	21
	2.3.1 Hydrogenating/dehydrogenating Function	27
	2.3.2 Acid Function	27

Heterogeneous Catalysis for Energy Applications
Energy and Environment Series No. 27
Edited by Tomas R. Reina and Jose A. Odriozola
© The Royal Society of Chemistry 2020
Published by the Royal Society of Chemistry, www.rsc.org

2.3.3	Relationship between Hydrogenating/ dehydrogenating and Acid Functions	27
2.3.4	Catalyst Activation	27
2.4	Clays as Acid Catalyst Supports	28
2.4.1	Structure of Clay Minerals	29
2.4.2	Methods of Modifying and Modulating the Acidity of Clay Minerals	30
2.5	Clays as Catalysts in Hydrocracking Reactions	34
2.6	Conclusion	34
	Acknowledgements	38
	References	38
Chapter 3	Catalytic Conversion of Fossil and Renewable Fuel Resources: Approaches Using Sub and Supercritical Water as a Reaction Medium	46
	<i>P. Arcelus-Arrillaga, J. L. Pinilla and M. Millan</i>	
3.1	Introduction	46
3.2	Overview of Water at Sub and Supercritical Conditions	47
3.2.1	Properties of Sub and Supercritical Water	49
3.2.2	Near-critical and Supercritical Water as Reaction Media	50
3.2.3	Reactions in Sub and Supercritical Water	52
3.2.4	Catalysis in Sub and Supercritical Water	54
3.3	Catalytic Upgrading of Oil in Sub and Supercritical Water	56
3.4	Catalytic Upgrading of Biomass and Organic Waste in Sub and Supercritical Water	60
3.4.1	Catalytic Hydrothermal Liquefaction of Biomass and Solid Waste	61
3.4.2	Catalytic Bio-oil Deoxygenation	70
3.5	Conclusion	71
	Acknowledgements	73
	References	73
Chapter 4	Recent Advances in Photocatalytic Materials for Solar Fuel Production from Water and Carbon Dioxide	80
	<i>Miriam Regue, Santosh Kumar, and Salvador Eslava</i>	
4.1	Introduction	80
4.2	Semiconductor Photocatalysis and Basic Mechanism	81

<i>Contents</i>	xi
4.3 Solar Fuel Production	82
4.3.1 Photocatalytic H ₂ Production	82
4.3.2 Photocatalytic CO ₂ Conversion	83
4.4 Photocatalytic Materials	84
4.4.1 Metal Oxides	85
4.4.2 Perovskite Materials	93
4.4.3 Plasmonic Materials	96
4.4.4 Metal-free Photocatalysts	99
4.4.5 Metal-Organic Frameworks	103
4.4.6 Miscellaneous: Metal Sulfides and Layered Double Hydroxides	106
4.5 Conclusions	109
References	109
 Chapter 5 Catalytic Technologies for Clean Hydrogen Production	 116
<i>Sara Navarro Jaen, Cristina Megias Sayago, Svetlana Ivanova and José Antonio Odriozola</i>	
5.1 Hydrogen Economy: General Aspects	116
5.2 Current Scenario: Prevalence of Fossil Fuel Sources	117
5.2.1 Steam Reforming	117
5.2.2 Partial Oxidation	117
5.2.3 Autothermal Reforming	118
5.2.4 Coal Gasification	118
5.3 Hydrogen Production from Renewable Sources	118
5.3.1 Electrolysis	118
5.3.2 Hydrogen Production from Biomass	119
5.4 Hydrogen Fuel Processors: Catalysis and Reaction Engineering	120
5.5 Successful Stories of Hydrogen Clean-up Heterogeneous Catalysis	123
5.5.1 WGS Catalysts	123
5.5.2 Recent Advances in Gold WGS Catalysis	124
5.5.3 Recent Advances in Platinum WGS Catalysis	127
5.5.4 Recent Advances in CO-PrOx Catalysis	137
References	144

Chapter 6	Application of Heterogeneous Catalysts for the Conversion of Biomass-derived Feedstocks into Fuel Components and Eco-additives	150
	<i>P. M. Yeletsky, R. G. Kukushkin, M. V. Alekseeva and A. A. Smirnov</i>	
6.1	Introduction	150
6.2	Catalytic Hydrotreatment of Pyrolysis Bio-oil into Valuable Products	151
6.2.1	Composition and Properties of Pyrolysis Liquids from Lignocellulosic Biomass	153
6.2.2	Sulfided Catalysts: Historical Beginning of Pyrolysis Oil Hydrotreatment	154
6.2.3	Noble Metal-based Catalysts	155
6.2.4	Catalysts Based on Transition Metals	156
6.3	One-stage Production of Isomerized Alkanes of Fuel Purposes from Vegetable Oils and Other Lipid-based Feedstocks	158
6.3.1	Basic Aspects of Catalytic Hydroisomerization of Linear Alkanes	159
6.3.2	Application of Zeolite- and Silicoaluminophosphate-supported Catalysts for HDO-HI of Lipidic Feedstocks	161
6.3.3	Application of HDO-HI Catalysts Supported by Other Porous Materials	165
6.4	Catalytic Production of Fuel Eco-additives from Biomass	167
6.5	Conclusions	172
	Acknowledgement	173
	References	173
Chapter 7	Catalysis in Modern Bio-refineries: Towards a New Bio-energy Paradigm	180
	<i>Jie Yu</i>	
7.1	Introduction	180
7.2	Stability of Catalysts in SCW	182
7.3	Mechanism of Catalytic Reaction in SCW	185
7.3.1	Reaction Chemistry	185
7.3.2	Heterogeneous Catalysts	187

<i>Contents</i>		xiii
7.4	Effect of Catalysts	188
7.5	Methanation Formation Mechanism	190
7.5.1	Pathway I: Direct Methane Production	190
7.5.2	Pathway II: Methanation Reaction with Ru Metal	191
7.5.3	Methane Reforming	193
7.6	Deactivation of Catalysts in SCW	193
7.6.1	Sulfur Deactivation	194
7.7	Metal Leaching	195
	References	197
Chapter 8	Catalytic Technologies for the Production of Liquid Transportation Fuels from Biomass	202
	<i>Lola Azancot, Luis F. Bobadilla, Francisca Romero-Sarria and José A. Odriozola</i>	
8.1	Introduction: A General Overview	202
8.2	Current Scenario of BTL Technology	204
8.3	Production of Biomass-derived Syngas	206
8.3.1	Transformation of Biogas into Valuable Syngas	206
8.3.2	Catalytic Upgrading of Syngas Obtained by Thermochemical Conversion of Biomass	214
8.4	Production of Liquid Fuels: FTS	216
8.4.1	Current Status	216
8.4.2	Design of FTS Catalysts	219
8.4.3	Mechanistic Considerations	221
8.5	Further Trends: Structured Catalysts and Microreactors	223
8.6	Summary and Concluding Remarks	225
	Acknowledgements	226
	References	226
Chapter 9	Metal Organic Frameworks: From Material Chemistry to Catalytic Applications	235
	<i>Enrique V. Ramos-Fernández, J. C. Serrano-Ruiz, A. Sepúlveda-Escribano, J. Narciso, Jesús Ferrando-Soria and Emilio Pardo</i>	
9.1	Introduction	235
9.2	Active Sites in MOFs	239

9.2.1	Open Metal Sites	240
9.2.2	Organic Functional Groups	252
9.2.3	MOFs as Precursors of Catalysts	256
9.2.4	Guest Functional Species within the Empty Space of MOFs	257
	References	285
Chapter 10	Application of Ionic Liquids for Sustainable Catalysis	304
	<i>P. Granger and V. I. Parvulescu</i>	
10.1	Concept and Definition of Sustainable Chemistry	304
10.2	Solvents and Sustainability	306
10.3	Process Intensification through Catalysis	313
10.4	IL Catalysts	313
10.4.1	Homogeneous IL Catalysts	313
10.4.2	Heterogeneized IL Catalysts	316
10.4.3	Grafting ILs onto Ordered Frameworks	318
10.4.4	Sustainable Catalytic Processes Using ILs	319
10.4.5	CO ₂ Valorization	329
10.4.6	Oxidation Reactions	340
10.4.7	Sustainable Reactions in Organic and Pharmaceutical Chemistry	340
10.4.8	Other Sustainable Catalytic Reactions	342
10.5	Conclusions	350
	References	352
Chapter 11	Structured Catalysts and Non-conventional Reactor Designs for Energy Applications	361
	<i>Matteo Ambrosetti, Riccardo Balzarotti, Laura Fratalocchi, Mauro Bracconi, Gianpiero Groppi and Enrico Tronconi</i>	
11.1	Introduction	361
11.2	Heat Transport Properties of Structured Catalyst Substrates	364
11.2.1	Honeycomb Monoliths	364
11.2.2	Foams	367
11.2.3	Periodic Open Cellular Structures	370
11.3	Applications to Methane Steam Reforming	371
11.3.1	Packed Bed <i>versus</i> Washcoated Foams	375
11.3.2	Packed Foam Configuration	377
11.4	FTS over Conductive Structured Catalyst Supports	382

<i>Contents</i>	xv
11.5 Conclusions	390
Acknowledgements	391
References	391
Chapter 12 Catalytic Conversion of CO₂ to Fuels and Value-added Chemicals	397
<i>A. Álvarez, O. H. Laguna and S. Murcia-López</i>	
12.1 Introduction	397
12.2 Thermochemical Conversion of CO ₂ to Fuels	403
12.2.1 Methanol	403
12.2.2 Dimethyl Ether	406
12.2.3 Hydrocarbons	408
12.2.4 Methane	411
12.3 Alternative Technologies: CO ₂ to Value-added Chemicals	415
12.3.1 Electrocatalytic Conversion of CO ₂	416
12.3.2 Electrolysers for CO ₂ Reduction	417
12.3.3 Electrocatalysts for CO ₂ RR	419
12.3.4 Electrochemical CO ₂ RR: Future Perspectives	423
12.4 Conclusion	423
References	424
Chapter 13 <i>In Situ</i> Characterization of Metal/Oxide Catalysts for CO₂ Conversion: From Fundamental Aspects to Real Catalyst Design	431
<i>Mausumi Mahapatra, Luis E. Betancourt, Zongyuan Liu, Dimitriy Vovchok, Juan P. Simonovis, José A. Rodríguez and Sanjaya D. Senanayake</i>	
13.1 Introduction	431
13.2 Scanning Tunnelling Microscopy	433
13.3 Ambient Pressure XPS	439
13.4 Vibrational Spectroscopy	442
13.4.1 Reflection Absorption Infrared Spectroscopy	443
13.4.2 Diffuse Reflectance Infrared Fourier-transform Spectroscopy	444
13.5 <i>In Situ</i> XRD	446
13.6 <i>In Situ</i> XAFS Spectroscopy	451
13.7 Outlook and Future Directions	453
Acknowledgements	454
References	454

Chapter 14 Catalytic Aspects of Fuel Cells: Overview and Insights into Solid Oxide Fuel Cells	459
<i>Mohammadmehdi Choolaei and Bahman Amini Horri</i>	
14.1 Introduction	459
14.1.1 History	462
14.2 Reaction Kinetics at Electrodes	466
14.3 Temperature-based SOFC Classification	469
14.3.1 High-temperature SOFC Anodes	469
14.3.2 Intermediate-temperature SOFC Anodes	469
14.3.3 Low-temperature SOFC Anodes	470
14.4 Structure-based Anodes	470
14.5 Hydrocarbon-fuelled SOFCs	473
14.5.1 Ni-ZrO ₂ (Y ₂ O ₃) Cermet	474
14.5.2 Alloying Ni with Metals	476
14.5.3 Surface Decoration of Ni-based Anodes with Metals and Metal Oxides	478
14.5.4 Modification of the Ceramic Phase in Ni-based Anodes	479
14.5.5 Copper and Other Noble Metal Cermets	480
14.5.6 Ceria and Other Compounds	481
14.6 Conclusion	483
Appendix A. Types of Fuel Cells	484
References	486
Subject Index	495
