2 Synthesis in Medicinal Chemistry 40

Allan M. Jordan and Robert J. Young

2.1 The State of the Art – Where are We, and How did We Get Here?	40
2.1.1 The Evolving Landscape of Synthetic Medicinal Chemistry – Changes in Discovery Practices	41
2.1.2 Why Do We Use the Reactions We Use?	43
2.1.3 We are Where we are – but Does it Matter?	47
2.2 How to Improve Molecules Through Synthesis	48
2.2.1 Some Historic Examples where Synthesis Enabled Discovery	48
2.2.2 Four Strategies to Improve Molecules: Methylation, Hydroxylation, Fluorination and Heterocycles	51
2.2.3 Better Late-stage Functionalisation	53
2.2.4 Biotransformations	54
2.2.5 Water-based Chemistry	59
2.2.6 Mimicking Nature	60
2.2.7 Isosteres	67
2.2.8 Fragment-Based Drug Discovery (FBDD)	68
2.2.9 Avoiding Nuisance Compounds, PAINS and Potentially Reactive Species	73
2.3 Improving the Efficiency of Synthetic Medicinal Chemistry	74
2.3.1 AI/Machine Learning in Synthesis Planning	76
2.3.2 Automation and Linking to Reaction Planning	78
2.3.3 Synthetic Techniques and Technologies: Flow Chemistry	79
2.3.4 Purification Technologies and Compound Handling	81
2.4 Case Studies	83
2.4.1 AMG-176	83
2.4.2 E7130, C52-Halichondrin-B-amine	84
2.5 The Future? New Modalities and Synthetic Impact	86
References	88

3 Useful Computational Chemistry Tools for Medicinal Chemistry 94

Darren V. S. Green and Colin M. Edge

3.1 Physics-based vs. Empirical Models	94
3.2 Molecular Mechanics and Molecular Orbital Theory	95
3.2.1 Quantum Mechanics	97
3.2.2 Molecular Mechanics	101
3.2.3 Electronic Distribution and Electrostatic Isopotentials	103
3.2.4 3-Dimensional Molecular Similarity	104
3.2.5 Energy Minimisation	105
3.3 Molecular Simulation and Dynamics	105
3.4 Modelling Solvation	109

3.5 Conformations, Conformational Energy and Drug Design	112
3.6 Quantifying Molecular Interactions from Experimental Data	115
3.7 Docking and Scoring Functions	116
3.8 Cheminformatics	120
3.9 Examples of Impactful Computational Chemistry on Drug Design	126
3.10 Hints and Tips	130
References	132

4 Structure-based Design for Medicinal Chemists 137

Jeff Blaney and Andrew M. Davis

4.1 Introduction	137
4.2 History	138
4.3 Protein Structures for Structure-based Design	139
4.3.1 Experimentally Determined Structures	139
4.3.2 Limitations of the Use of X-ray Crystal and Cryo-EM Structures	140
4.3.3 Predicting Protein Structures: AlphaFold and RoseTTAFold	141
4.4 Theory and Practice of Structure-based Design	142
4.4.1 Visualizing Shape Complementarity	142
4.4.2 What Drives Binding?	144
4.4.3 Favorable and Unfavorable Waters and Water Networks	145
4.4.4 Protein Flexibility	147
4.4.5 Enthalpy–Entropy Compensation	148
4.4.6 Electrostatics	149
4.4.7 Small Molecules Bind in Their Lowest Energy, Preferred Conformations	150
4.4.8 Preferred and Competitive Protein–Ligand Interactions	152
4.5 Ligand-induced Conformational Change	160
4.5.1 Hypothesis-based Design	165
4.5.2 Predicting Affinity: Free Energy Perturbation	168
4.5.3 Test the Quality of a Design with Ligand Strain Energy, MD, and Docking	170
4.5.4 Large-scale Virtual Screening	171
4.5.5 Visual Docking Pose Assessment and Human Expertise	171
4.5.6 Covalent Inhibitor Design	172
4.6 Future Directions	173
4.6.1 DNA Encoded Libraries	174
4.6.2 DEL and Machine Learning	174
4.6.3 PROTAC Degradable and Molecular Glues	175
4.6.4 Cryo-EM	176
4.6.5 Machine Learning (ML)	179
4.7 Summary	179
4.8 Hints and Tips	180

7 Drug Metabolism

265

R. Lock, P. J. H. Webborn, C. W. Vose and R. M. J. Ings

7.1 Introduction	265
7.2 Drug Metabolism Pathways	266
7.3 The Key Role of Cytochrome P450 Enzymes	268
7.4 What Are the Key Organs that Metabolise Drugs?	271
7.5 Relationship Between Chemical Structure and Rate of CYP Metabolism	271
7.6 How is Drug Metabolism Studied?	273
7.7 Metabolites in Assessing Drug Safety and Efficacy	275
7.7.1 The Industry Perspective	275
7.7.2 Guidance on Safety Testing of Metabolites	276
7.7.3 Reactive Metabolites	278
7.8 What Factors Influence the Metabolism of Drugs?	280
7.8.1 Dose Level	280
7.8.2 Route of Administration	281
7.8.3 Species Difference in Metabolism	281
7.8.4 Gender-related Differences	283
7.8.5 Age	283
7.8.6 Disease	284
7.8.7 Genetics	284
7.9 Metabolism-based Drug–Drug Interactions	285
7.10 How Transporter Proteins Affect Drug Metabolism	291
7.11 Summary	293
7.12 Drug Metabolism Hints and Tips	294
7.13 Recommended Reading	295

8 ADME Optimization in Drug Discovery 298

Dermot F. McGinnity and Ken Grime

8.1 Introduction	298
8.1.1 Absorption	299
8.1.2 Distribution	300
8.1.3 Metabolism	301
8.1.4 Excretion	301
8.2 Optimization and Prediction of Key Human Pharmacokinetic Parameters in Drug Discovery	302
8.2.1 Oral Absorption	303
8.2.2 Volume of Distribution	305
8.2.3 Distribution into Central Nervous System	308
8.2.4 Human Clearance	309
8.3 ADME Considerations for PROTACs	314
8.4 Inhaled, Topical and Intravenous Routes of Administration	315
8.5 Hints and Tips	317
8.6 Summary	318

9 Molecular Biology for Medicinal Chemists 324

N. M. Ahmad, E. Bush, B. Nancolas, N. Macabuag and P. I. Racz

9.1 A Brief History of Molecular Biology	324
9.2 Sequencing	328
9.2.1 History of Sequencing	328
9.2.2 Sanger Sequencing	329
9.2.3 Next-generation Sequencing	330
9.2.4 RNA Sequencing	332
9.2.5 Third-generation DNA Sequencing	332
9.3 Gene-editing Methods	334
9.3.1 Zinc Finger Nucleases (ZFNs)	335
9.3.2 Transcription Activator-like Effector Nucleases (TALENs)	335
9.3.3 CRISPR	336
9.3.4 Gene Expression Modulation by RNA Interference (RNAi)	338
9.4 Model Systems	340
9.4.1 Cellular Systems	340
9.4.2 Immortalised Cells	342
9.4.3 Primary Cells	342
9.4.4 Stem Cells	343
9.5 Gene Expression Studies and Their Application	345
9.5.1 Application of PCR	345
9.5.2 Studying Gene Expression by Quantitative Reverse Transcription PCR (qRT-PCR)	346

9.5.3 Digital PCR	348
9.5.4 Reporter Cell Lines	348
9.6 Proteomics in Drug Discovery	350
9.6.1 Protein Microarrays	350
9.6.2 Kinase Profiling	351
9.6.3 Label-free Proteome Profiling	352
9.7 Hints and Tips	353

10 Assays 359

Barbara Saxty and Peter J. Coombs

10.1 Assay Detection Technologies	359
10.1.1 Absorbance	359
10.1.2 Fluorescence	360
10.1.3 Luminescence	361
10.1.4 Antibody-based Assays	362
10.1.5 Mass Spectrometry	364
10.1.6 Surface Plasmon Resonance	366
10.1.7 Microscale Thermophoresis (MST)	366
10.1.8 Protein Thermal Shift and CETSA	367
10.1.9 Cell Imaging	367
10.2 Assay Design	369
10.2.1 Biophysical Assays	371
10.2.2 Enzyme Assays	375
10.2.3 Ion Channel Assays	378
10.2.4 GPCR Assays	380
10.2.5 Cell Reporter Gene	382
10.2.6 Cell Phenotypic Assays	383
10.3 Building the Cascade	386
10.3.1 Primary Assay	386
10.3.2 Target Engagement	389
10.3.3 Mode of Action	390
10.4 The Cascade in Practise	392
10.4.1 Data Analysis	392
10.4.2 Biophysical Assay Data Analysis	394
10.4.3 Robustness Analysis and Data Comparison	395
10.4.4 When Assays Fail	395
10.4.5 The SAR Doesn't Track Across Assays in the Cascade	396
10.5 Hints and Tips	397
10.5.1 Assay Design Fundamental Questions	397
10.5.2 Assay Troubleshooting	398
10.5.3 What Can You Do When Your Data Looks Odd?	398

20 Lead Optimisation: What You Should Know! 720

Simon E. Ward and Andrew M. Davis

20.1 The Role of Lead Optimisation	720
20.1.1 What is Obtained from Lead Identification: Assessing the Series	721
20.1.2 Defining the Ultimate Candidate Profile	722
20.1.3 Progressing into Clinical Development – Dose Selection	726
20.1.4 The Process of Optimisation	728
20.1.5 Screening Cascade	731
20.1.6 Decision-making in the Screening Cycle	733
20.1.7 Progression Criteria	734
20.1.8 Predicted Properties	734
20.1.9 The Use of Colour to Simplify Decision-making	734
20.2 Lead Optimisation – The Practicalities	735
20.2.1 Quality of Start Point is of Paramount Importance	735
20.2.2 Starting Lead Optimisation: Identifying the Weaknesses	735
20.2.3 Formulating a Strategy for Full Lead Optimisation	736
20.2.4 Strategies to Optimise Common Parameters in Early Lead Optimisation	737
20.2.5 Drop-off in Cellular Potency and Downstream Assays	741
20.2.6 Selectivity	743
20.2.7 Solubility	745
20.2.8 Metabolism	747
20.2.9 Toxicity and Phospholipidosis	751
20.2.10 Pfizer MPO	752
20.3 The End Game: Choosing the Candidate Drug	752
20.3.1 Shortlisting	752
20.3.2 Scale-up and Safety Testing	753
20.3.3 Back-up Approaches	753
20.4 LTC4S Inhibitor LO Case Study	754
20.4.1 Pharmacological Profile of AZD9898	761
20.4.2 Human Dose Predictions	762
20.5 Hints and Tips	765

21 Pharmaceutical Properties – The Importance of Solid Form Selection 769

Cheryl L. Doherty, Amy L. Robertson, Nicola Clear and Robert Docherty

21.1 Introduction	769
21.2 Solid State Chemistry	771
21.2.1 Crystallography	771
21.2.2 Crystal Chemistry and Crystal Packing of Drug Molecules	773
21.2.3 Intermolecular Interactions, Crystal Packing Energies	773
21.2.4 Crystallisation Solubility, Supersaturation and Metastable Zone	774
21.2.5 Pharmaceutical Polymorphs and the Solid State	776
21.2.6 Polymorphism, Thermodynamic Stability and Solubility	777
21.3 Industry Practises	778
21.3.1 Salt Screening and Selection	778
21.3.2 Co-crystal Screening	780
21.3.3 Polymorph Screening	781
21.3.4 Hydrate Screening	783
21.3.5 Amorphous Forms	784
21.3.6 Manufacturability and Particle Engineering	786
21.3.7 Computational Solid Form Design	788
21.4 Integration Within the Early Clinical Phases of Development	790
21.4.1 The Changing Drug Product Design Paradigm	790
21.5 Different Requirements for Dosage Form Types	791
21.6 Integration of Enabling Formulation Strategies	792
21.7 Future Outlook	795
References	795

22 The Medicinal Chemistry and Process Chemistry Interface 800

William R. F. Goundry and Jeremy S. Parker

22.1 Why is the Medicinal Chemistry–Process Chemistry Interface Important?	800
22.1.1 Strategic Differences Between Medicinal Chemistry and Process Chemistry Syntheses	800
22.1.2 What Constitutes a Good Process Chemistry Synthesis?	801
22.1.3 Early Signs of Potential Issues	802
22.2 Collaboration Opportunities at the Medicinal Chemistry–Process Chemistry Interface	803
22.2.1 Provision of Information	804
22.2.2 Sustainability	805
22.2.3 Process Safety	805
22.2.4 Route Design	806
22.2.5 Process Design	806
