<b>Chapter 1</b>	<b>Introduction</b>	<b>1</b>
	<i>Mai Bui and Niall Mac Dowell</i>	
1.1	Where Are We Now?	1
1.2	What To Do?	2
1.3	Conclusions	3
	References	4
<b>Chapter 2</b>	<b>Greenhouse Gas Removal: Overview and Current Status of Deployment</b>	<b>6</b>
	<i>Maxwell Pisciotta, Justine Davids and Jennifer Wilcox</i>	
2.1	Perspective Shift	6
2.2	Removing CO <sub>2</sub> from the Air	9
2.3	Challenges and Opportunities of GGR	10
2.3.1	Bioenergy with Carbon Capture and Storage (BECCS)	14
2.3.2	Direct Air Capture (DAC)	14
2.3.3	Mineral Carbonation	15
2.3.4	Ocean Alkalinity Enhancement	16
2.3.5	Soil Carbon Sequestration	17
2.3.6	Biochar	18
2.3.7	Afforestation and Reforestation	19
2.3.8	Ocean Fertilisation	20
2.3.9	Coastal Blue Carbon	20
2.4	CO <sub>2</sub> Storage	21
2.5	Co-benefits and Societal Considerations	21

2.6	Concluding Remarks	22
	References	22
<b>Chapter 3</b>	<b>Negative Emissions: The Role and Response of the Climate System</b>	<b>27</b>
	<i>Chris D. Jones</i>	
3.1	Introduction	28
3.1.1	The Need for Negative Emissions to Achieve Climate Goals	28
3.1.2	The Role of the Earth System in NETs Research	29
3.2	Supply and Demand for Negative Emissions	30
3.3	Earth System Implications for the Demand for Negative Emissions	33
3.3.1	Earth System Model Response to Negative Emissions in Complex Models	34
3.4	Earth System Implications for the Supply of Negative Emissions	39
3.4.1	BECCS and Afforestation	40
3.4.2	Land Management and Restoration	41
3.4.3	Summary	41
3.5	Discussion and Conclusions	42
3.5.1	Co-benefits and Unintended Consequences	42
3.5.2	Other Considerations: The Role of Non-CO <sub>2</sub> Activities	43
	Glossary	44
	References	45
<b>Chapter 4</b>	<b>Accounting Negative Emissions. How Difficult Could It Be?</b>	<b>57</b>
	<i>Andrea Ramírez Ramírez</i>	
4.1	Introduction	57
4.2	Carbon Accounting	59
4.3	Storage Time: How Long is Long Enough?	60
4.3.1	Time Horizon and Lifetime of Carbon Storage in Products	61
4.4	The Timing of Emissions and Removals	67
4.4.1	Delayed Emissions	68
4.5	CO <sub>2</sub> Storage and CO <sub>2</sub> Avoidance	71
4.6	Some Final Words	73
	References	74

<i>Contents</i>	xi
<b>Chapter 5 Bioenergy with Carbon Capture and Storage (BECCS)</b>	<b>80</b>
<i>Mathilde Fajardy</i>	
5.1 Introduction	80
5.1.1 BECCS Principle	80
5.1.2 BECCS Value in Decarbonisation Pathways	81
5.1.3 How Much BECCS is there Today?	83
5.2 Definitions	83
5.2.1 BECCS Value Chain	83
5.2.2 BECCS Carbon Metrics	86
5.2.3 BECCS Energy Metrics	89
5.2.4 BECCS Financial Metrics	90
5.2.5 BECCS Environmental Metrics	90
5.3 BECCS Feedstocks	91
5.3.1 Woody Biomass	92
5.3.2 Energy Crops and Residues	92
5.3.3 Wastes	93
5.4 BECCS Pathways	94
5.4.1 BECCS to Power	94
5.4.2 BECCS to Liquid Fuel	95
5.4.3 BECCS for Hydrogen	98
5.4.4 BECCS in Industry	101
5.4.5 Mitigation vs. Removal Potential and System Integration Effects	102
5.5 Deployment Opportunities and Constraints	103
5.5.1 BECCS Global Sustainable Potential and Impacts	103
5.5.2 Low Hanging Fruit	105
5.5.3 Optimal BECCS Deployment at the Global Level	106
5.5.4 NET Co-deployment and Synergies	107
5.6 Conclusion	108
References	108
<b>Chapter 6 Direct Air Capture</b>	<b>115</b>
<i>Howard Herzog</i>	
6.1 Overview	115
6.2 Process Fundamentals	117
6.2.1 Air Handling and Contactor Design	118
6.2.2 Minimum Work and Energy Requirements	120

6.3	Process Design	123
6.3.1	Climeworks	124
6.3.2	Carbon Engineering	127
6.4	Costs	130
6.5	Assessment and Takeaway Messages	135
	Acknowledgements	136
	References	136
<b>Chapter 7</b>	<b>Geochemical Negative Emission Technologies</b>	<b>138</b>
	<i>Olivia Hawrot, James Campbell,</i>	
	<i>Frances Buckingham and Phil Renforth</i>	
7.1	Historical Context	139
7.1.1	Introduction	139
7.1.2	<i>Ex-situ</i> Mineral Carbonation	140
7.1.3	<i>In-situ</i> Carbonation	145
7.1.4	Enhanced Rock Weathering (Surficial)	146
7.1.5	Anthropogenic Alkaline Materials	147
7.2	Resources	150
7.2.1	Chemistry	150
7.2.2	Dissolution Minerals	151
7.2.3	Secondary Minerals	154
7.2.4	Ocean Alkalinity	155
7.3	The Kinetics of Geochemical NETs	157
7.3.1	Gas–Solid Processes	157
7.3.2	Aqueous Processes	158
7.3.3	Summary	163
7.4	Geochemical NET systems	163
7.4.1	<i>Ex-situ</i> Mineral Carbonation	163
7.4.2	<i>In-situ</i> Mineral Carbonation	172
7.4.3	Anthropogenic Alkaline Material Carbonation	172
7.4.4	Proposals for Increasing Ocean Alkalinity	173
7.4.5	Hybrid Approaches	174
7.5	Risks and Co-benefits	174
7.5.1	Valuable Products	174
7.5.2	Valuable Services	175
7.5.3	Risks	175
7.6	Conclusions	177
	Glossary	178
	Acknowledgements	183
	References	183

<i>Contents</i>	xiii
<b>Chapter 8 Soil Carbon Sequestration and Biochar</b>	<b>194</b>
<i>Sylvia H. Vetter, Mohamed Abdalla, Matthias Kuhnert and Pete Smith</i>	
8.1 Introduction	195
8.2 Soil Carbon Sequestration (SCS)	197
8.2.1 SCS Management	197
8.2.2 Impacts of SCS Managements	207
8.2.3 SCS as a Greenhouse Gas Removal Technology	212
8.3 Biochar	216
8.3.1 What is Biochar?	216
8.3.2 Biochar as a Greenhouse Gas Removal Technology	218
8.3.3 Impact of Biochar Beyond the Function as GGR	222
8.4 Implementation Frameworks	228
8.4.1 The “4 per 1000” Initiative – Soils for Food Security and Climate	228
8.5 Summary and Conclusions	229
References	231
<b>Chapter 9 Afforestation/Reforestation (AR)</b>	<b>244</b>
<i>Solene Chiquier and Niall Mac Dowell</i>	
9.1 Introduction	244
9.1.1 Definition and Scope of the Study	244
9.1.2 Accounting for CO <sub>2</sub> Sequestration in AR Projects	245
9.1.3 Chapter Contributions	248
9.2 Forest Growth Model	248
9.2.1 Model Scope & Characterisation	248
9.2.2 Above-ground Biomass	251
9.2.3 Afforested Above-ground Biomass	253
9.2.4 Below-ground Biomass	259
9.2.5 Total Biomass	259
9.2.6 Overview	259
9.3 Biogenic C (and CO <sub>2</sub> ) Sequestration Model	261
9.3.1 Biogenic C Pools	261
9.3.2 Biomass C Pool	262
9.3.3 Dead Organic Matter C Pool	264
9.3.4 Harvested Wood Product C Pool	264
9.3.5 Overview	265

9.4	Risk-adjusted C Sequestration Model	266
9.4.1	Permanence of Biogenic CO <sub>2</sub> Sequestration	266
9.4.2	Wildfire-penalty Coefficient	267
9.4.3	CO <sub>2</sub> Sequestration Potential	268
9.5	Forestry Operations Model	269
9.5.1	Site Establishment	270
9.5.2	Forest Road Construction and Maintenance	270
9.5.3	Annual Forestry Operations	271
9.6	CO <sub>2</sub> and N <sub>2</sub> O Balance Model	271
9.6.1	CO <sub>2</sub> and N <sub>2</sub> O Emission Contributions	271
9.6.2	CO <sub>2</sub> Removal Efficiency	273
9.6.3	GHG Balance/CO <sub>2</sub> Removal Potential	275
9.7	Cost Balance Model	275
9.7.1	Cost Contributions	275
9.7.2	Cost Balance Over 100 Years	277
9.7.3	Cost Balance Over 1000 Years	278
9.8	Water Footprint Model	280
9.8.1	Water Contributions	280
9.8.2	Water Balance	284
9.9	Conclusion	285
	References	286

## **Chapter 10 Feasibility of Using Biologically-based Processes in the Open Ocean and Coastal Seas for Atmospheric CO<sub>2</sub> Removal**

291

*Phillip Williamson, Philip W. Boyd, Daniel P. Harrison,  
Nick Reynard and Ali Mashayek*

10.1	Introduction	292
10.2	Biologically-based CO <sub>2</sub> Removal in the Open Ocean	295
10.2.1	Direct Ocean Iron Fertilisation	295
10.2.2	Atmospheric Ocean Iron Fertilisation (Iron Salt Aerosol)	303
10.2.3	Macronutrient Addition	305
10.2.4	Enhanced Upwelling to Increase Productivity	309
10.3	Biologically-based CO <sub>2</sub> Removal in Coastal Seas	311
10.3.1	Coastal Blue Carbon Ecosystems	311
10.3.2	Marine BECCS Using Seaweed (Macroalgae)	322
10.4	Conclusions	326
	Acknowledgements and Competing Interests	330
	References	330

<b>Chapter 11 Comparison of Technologies and Practices for Removing Carbon Dioxide from the Atmosphere</b>	<b>351</b>
<i>Sabine Fuss</i>	
11.1 Introduction	351
11.2 Readiness Framework for CDR	357
11.3 Comparison of CDR Technologies and Practices	358
11.3.1 Bioenergy with Carbon Capture and Storage (BECCS)	358
11.3.2 Direct Air Carbon Capture and Storage (DACCS)	360
11.3.3 Mineral Carbonation and Alkaline Materials	362
11.3.4 Soil Carbon Sequestration and Biochar	363
11.3.5 Afforestation	365
11.3.6 Marine Biologically-based CDR	366
11.4 Synthesis	368
11.5 Discussion	369
Abbreviations	371
Acknowledgements	371

<b>Chapter 12 Global Distribution of Negative Emissions</b>	<b>378</b>
<i>Carlos Pozo, Ángel Galán-Martín, David M. Reiner, Gonzalo Guillén-Gosálbez, Mai Bui and Niall Mac Dowell</i>	
12.1 Introduction	379
12.2 Definition of Fair CDR Quotas	380
12.3 Two Possible Pathways: Isolationist and Cooperative	381
12.4 Encouraging Cooperation: United We Stand	384
12.5 Effective Policies to Remove Barriers	385
12.6 Conclusions	386
References	388
<b>Chapter 13 Political and Socio-economic Challenges of Greenhouse Gas Removal Technologies</b>	<b>390</b>
<i>Zeynep Clulow and David M. Reiner</i>	
13.1 Introduction	391
13.2 Economic Challenges	395
13.2.1 Cost Structures	395
13.2.2 Compatibility with Other Priorities	397
13.2.3 Incentives	398

13.3	Stakeholder Views	399
13.3.1	Governments	400
13.3.2	Private Sector Views	402
13.3.3	NGOs	408
13.3.4	Public Engagement	410
13.4	Governance	413
13.4.1	Incentivising GGR	413
13.4.2	Carbon Pricing	414
13.4.3	Accounting	414
13.4.4	Risk Management	415
13.4.5	Side-effects and Broader Implications	416
13.4.6	Procedural Justice	416
13.5	Socio-political Aspects of International Governance	417
13.6	Conclusion	419

<b>Chapter 14</b>	<b>Priorities for Policy Design</b>	<b>430</b>
	<i>Habiba Ahut Daggash, Mai Bui and Niall Mac Dowell</i>	
14.1	Introduction	431
14.1.1	Characterising NETs for Policy Development	432
14.2	Research and Development	434
14.2.1	Technological Feasibility	434
14.2.2	Costs	434
14.2.3	Scalability	437
14.2.4	Measuring, Verification and Reporting Guidelines	437
14.2.5	Environmental Impacts	437
14.3	Demonstration and Scale-up	437
14.4	Financing	438
14.4.1	NET-based Cost–benefit Analysis	439
14.4.2	NET-based Carbon Taxes	441
14.4.3	NET-based Carbon Markets	442
14.4.4	NET-based Subsidies	443
14.5	Niche Markets	444
14.6	Regulation and Governance	445
14.6.1	Recognising NETs	449
14.6.2	Measurement, Reporting and Verification	451
14.6.3	Cross-border Carbon Accounting	453
14.6.4	The Role of Diplomacy	454
