Part 1 Sustainable Redox Reaction

Chapter 1	Redox-mediated Electrochemical Cyclization Reactions	3
	<i>Zheng-Jian Wu and Hai-Chao Xu</i>	
1.1	Introduction	3
1.2	Radical Cyclization Reactions	4
1.2.1	Cyclization Reactions of Heteroatom-centered Radicals	4
1.2.2	Cyclization Reactions of Carbon-centered Radicals	14
1.3	Halide-mediated Ionic Cyclization Reactions	19
1.4	Conclusion	24
	Acknowledgements	24
	References	24
Chapter 2	Recent Advances in the Kolbe and Non-Kolbe Electrolysis of Carboxylic Acids	29
	<i>Alessia Petti and Kevin Lam</i>	
2.1	Introduction	29
2.2	Background of the Kolbe Electrolysis	30
2.3	Background of Non-Kolbe Electrolysis	31
2.4	Recent Advances in the Electrolysis of Carboxylic Acids	32
2.4.1	Kolbe Intramolecular Cyclisation	32
2.4.2	Hofer–Moest Synthesis of Isocyanates	38
2.4.3	Hofer–Moest Synthesis of Orthoesters	40

2.4.4	Electrochemical Methoxylation	46
2.4.5	Electrochemical Decarboxylation of Malonic Acid Derivatives	49
2.5	Recent Advances in the Electrolysis of Carboxylic Acid Derivatives	51
2.5.1	Electrochemical Deprotection of Aromatic Esters	51
2.5.2	Electrochemical Deoxygenation of Diphenylphosphinates	52
2.6	Future Perspectives	53
2.7	Conclusion	54
	Abbreviations	55
	Acknowledgements	55
	References	55
Chapter 3	Novel Electrolytic Processes	60
	<i>Koichi Mitsudo</i>	
3.1	Introduction	60
3.2	Parallel Batch Systems Used for Electroorganic Synthesis	61
3.2.1	Parallel Batch Systems Using the Cation Pool Method	61
3.2.2	Parallel Batch Processes for Electrosynthesis	61
3.3	Combinatorial Flow System for Electroorganic Chemistry	63
3.3.1	Flow Electrochemistry	63
3.3.2	PEM Reactor	68
3.4	Bipolar Electrochemical System	72
3.5	Conclusion	75
	References	76
Chapter 4	A Sugar Machine	80
	<i>Hirofumi Endo, Md Azadur Rahman and Toshiki Nokami</i>	
4.1	Introduction	80
4.2	Electrochemical Generation of Glycosylation Intermediates	82
4.2.1	Generation of Glycosyl Triflate Intermediates	82
4.2.2	Generation of Glycosyl Sulfonium Ion Intermediates	84

4.3	Development of a Method for Automated Electrochemical Solution-phase Synthesis of Oligosaccharides	86
4.3.1	Proof of Principle of One-pot Iterative Glycosylation	86
4.3.2	Demonstration of Automated Electrochemical Assembly of Oligosaccharides	88
4.4	Synthesis of Biologically Active Oligosaccharides	89
4.4.1	Synthesis of TMG-chitotriomycin	89
4.4.2	Synthesis of Myc-LCOs	92
4.5	Synthesis of 1,2- <i>trans</i> Glycosidic Linkages of Hexoses <i>via</i> Automated Electrochemical Assembly	93
4.6	Synthesis of Cyclic Oligosaccharides <i>via</i> Automated Electrochemical Assembly	96
4.7	Conclusion	97
	Acknowledgements	97
	References	97

Part 2 Sustainable Redox Catalysis

Chapter 5	Vanadium(v)-induced Oxidative Cross-coupling of Enolate Species	101
	<i>Toru Amaya</i>	
5.1	Introduction	101
5.2	Oxovanadium(v)-induced Intermolecular Selective Oxidative Cross-coupling between Boron and Silyl Enolates	105
5.3	Oxidative Cross-coupling between Various Boron and Silyl Enolates	107
5.4	Oxovanadium(v)-catalyzed Oxidative Cross-coupling between Boron and Silyl Enolates under O ₂ as a Terminal Oxidant	110
5.5	Conclusion	116
	Abbreviations	116
	Acknowledgements	117
	References	117
Chapter 6	Mediated Electron Transfer in Electrosynthesis: Concepts, Applications, and Recent Influences from Photoredox Catalysis	119
	<i>Robert Francke and Michal Májek</i>	
6.1	Introduction	119

6.2	Concepts and Applications	120
6.2.1	Direct and Indirect Electrosynthesis	121
6.2.2	The Catalytic Current	121
6.2.3	Redox Catalysis and Chemical Catalysis	123
6.2.4	<i>In-cell</i> - and <i>Ex-cell</i> -mediated Transformations	128
6.3	Approaches Toward Facilitating Mediator Recycling	132
6.3.1	Ionically Tagged Mediators	132
6.3.2	Polymediators	133
6.3.3	Mediator-modified Electrodes	136
6.4	Mediators in Photoelectrochemical Synthesis	136
6.4.1	Transformations at Photoelectrodes	138
6.4.2	Sequential Activation of Substrates by Electro- and Photochemistry	140
6.4.3	Enhancing Mediator Reactivity with Light	142
6.5	Conclusions	146
	Acknowledgements	148
	References	148
Chapter 7	Synergy of Electrochemistry and Asymmetric Catalysis	154
	<i>Yi-Min Jiang, Yi Yu, Zhaojiang Shi, Yi-Lun Li, Hong Yan and Ke-Yin Ye</i>	
7.1	Introduction	154
7.2	Substrates as the Redox Entities in Electrochemical Asymmetric Catalysis	156
7.3	Catalysts as Redox Entities in Electrochemical Asymmetric Catalysis	161
7.4	Both Substrates and Catalysts as the Redox Entities in Electrochemical Asymmetric Catalysis	166
7.5	Conclusion	172
	Acknowledgements	172
	References	172
Chapter 8	Alternative Approaches for Scalable Artificial Photosynthesis <i>via</i> Sustainable Redox Processes	175
	<i>Han Sen Soo</i>	
8.1	Introduction	175
8.2	Nonfood Biomass Oxidation	178
8.2.1	Photocatalytic Nonfood Biomass Oxidation	178
8.2.2	Electrocatalytic and Photoelectrocatalytic Nonfood Biomass Oxidation	184

<i>Contents</i>	xiii
8.3 Synthetic Polymer Oxidation	188
8.3.1 Heterogeneous Photocatalytic Oxidation of Synthetic Polymers	189
8.3.2 Homogeneous Photocatalytic Oxidation of Synthetic Polymers	192
8.4 Photosynthetic and Photocatalytic Reduction by Metal Halide Perovskites	196
8.5 Conclusions and Outlook	200
Acknowledgements	201
References	201
Chapter 9 Bioinspired Catalyst Learned from B₁₂-dependent Enzymes	207
<i>Hisashi Shimakoshi</i>	
9.1 Introduction	207
9.1.1 B ₁₂ (Cobalamin)-dependent Enzymes	208
9.1.2 Catalyst Design for B ₁₂ -dependent Enzyme-inspired Reactions	210
9.2 Photo-driven Molecular Transformation	210
9.2.1 Heterogeneous Catalyst System	210
9.2.2 Esters and Amides Formation Coupled with Dehalogenation	213
9.2.3 Visible Light-driven Catalytic System	214
9.2.4 B ₁₂ -inspired Hydrogen Production and Alkene Reduction	216
9.2.5 Homogeneous Catalyst System	217
9.2.6 Cross-coupling Reactions	218
9.2.7 B ₁₂ -BODIPY Dyad System	220
9.2.8 Catalysis of B ₁₂ Without Photocatalyst	221
9.3 Summary and Outlook	222
Acknowledgements	223
References	223
Part 3 Functional Redox System	
Chapter 10 Redox-active Molecules and Their Energy Device	
Application	229
<i>Akihiro Shimizu</i>	
10.1 Introduction	229
10.2 Organic Active Materials for Li-ion Batteries	230
10.2.1 Basic Concepts	230
10.2.2 Capacity Increase	230

10.2.3	Cyclability Increase	232
10.2.4	Voltage Increase	241
10.3	Organic Active Materials for Redox Flow Batteries	242
10.3.1	Aqueous Electrolyte	242
10.3.2	Nonaqueous Electrolyte	244
	References	246
Chapter 11	Redox-active Polymeric Materials	249
	<i>Naoki Shida and Shinsuke Inagi</i>	
11.1	Introduction	249
11.2	Conjugated Polymers	250
11.2.1	Doping of Conjugated Polymers	250
11.2.2	Oxidative and Reductive Electropolymerization	250
11.2.3	Electrochemical Polymer Reaction	252
11.2.4	Two- and Three-dimensional Conjugated Polymers	259
11.3	Nonconjugated Polymers with Redox-active Units	259
11.3.1	Polymers with Redox-active Units in the Side Chain	261
11.3.2	Block Copolymers with Redox-active Units	261
11.3.3	Polymeric Materials Mimicking Metalloproteins	263
11.3.4	Redox Units at the Periphery of Dendrimers	265
11.3.5	Redox-active Inorganic Polymers	266
11.4	Conjugated Polymers with Redox-active Moieties	268
11.5	Conclusion	270
	References	270
Chapter 12	Chiral Metal Electrodes for Enantioselective Analysis, Synthesis, and Separation	274
	<i>Chularat Wattanakit and Alexander Kuhn</i>	
12.1	Background	274
12.2	Elaboration of Chiral Metal Electrodes	275
12.2.1	Adsorption of Chiral/Achiral Molecules on Metal Surfaces	276
12.2.2	Binding of Chiral Ligands to Metal Surfaces	276
12.2.3	Controlled Cutting of Bulk Metals	277
12.2.4	Chiral Molecular Imprinting	278
12.3	Applications of Chiral Metal Electrodes	283
12.3.1	Enantioselective Analysis	283

<i>Contents</i>	xv
12.3.2 Asymmetric Synthesis	287
12.3.3 Electrochemical Separation	289
12.4 Conclusion and Perspectives	290
Acknowledgements	290
References	291
Chapter 13 Fluorescent Sensors for Water	300
<i>Yousuke Ooyama</i>	
13.1 Introduction	300
13.2 PET-based Fluorescent Sensors	302
13.3 PET/FRET-based Fluorescent Sensors	308
13.4 PET/AIEE-based Fluorescent Sensors	312
13.5 SFC/AIEE-based Fluorescent Sensors	316
13.6 ICT-based Fluorescent Sensors	319
13.7 Fluorescent Sensor-doped Polymer Films	326
13.8 Conclusion	328
Acknowledgements	328
References	328
Chapter 14 Photoredox Chemistries of Cyclometalated Ir(III) Complexes	331
<i>Youngmin You</i>	
14.1 Photoinduced Electron Transfer of Cyclometalated Ir(III) Complex	331
14.2 Electronic Structures of Cyclometalated Complexes of Ir(III)	337
14.3 Sensory Applications of Intramolecular Photoinduced Electron Transfer of Ir(III) Complexes	338
14.4 Photoredox Catalysis Based on Intermolecular Photoinduced Electron Transfer of Ir(III) Complexes	346
14.5 Outlook	356
Acknowledgements	356
References	357
Chapter 15 Electrogenerated Chemiluminescence in Functional Redox Chemistry	359
<i>Elena Villani and Shinsuke Inagi</i>	
15.1 Introduction	359

15.2	Fundamentals of ECL: Mechanisms of Light Generation	360
15.2.1	Annihilation ECL	360
15.2.2	Coreactant ECL	362
15.3	Applications of ECL in Molecular Electrochemistry	364
15.3.1	Novel ECL Reaction Systems	364
15.3.2	ECL for Imaging Applications	366
15.3.3	ECL of Organic Systems	366
15.3.4	Aggregation and Crystallization-induced Emission in ECL	369
15.4	Conclusions and Future Directions	371
	Acknowledgements	371
	References	371
	Subject Index	375
