

Contents

Chapter 1	Chemoresponsive Materials: Introduction, Overview, Promises	1
	<i>Hans-Jörg Schneider</i>	
1.1	Introduction and History	1
1.2	The Development of Molecular Switches and Machines	2
1.3	Cyclodextrins, Calixarenes and Cucurbit[<i>n</i>]urils as a Basis of Chemoresponsive Materials	5
1.4	Biomaterials as a Basis – Proteins, Nucleic Acids	7
1.5	Engineered Living Materials	8
1.6	New Smart Materials	9
1.7	Conclusions	10
	References	12
Chapter 2	Chemomechanical Materials: Sensors and Actuators	15
	<i>Hans-Jörg Schneider</i>	
2.1	Introduction	15
2.2	Hydrogels: Methodology and General Experimental Observations	16
2.3	Hydrogel Size Changes Triggered by pH, Solvent and Salt Variation	21
2.4	pH-triggered Actuators	25
2.5	Metal Ion Induced Hydrogel Volume Changes	27
2.6	Metal-ion-triggered Actuators	31

Smart Materials No. 40

Chemoresponsive Materials: Smart Materials for Chemical and Biological Stimulation:
2nd Edition

Edited by Hans-Jörg Schneider

© The Royal Society of Chemistry 2022

Published by the Royal Society of Chemistry, www.rsc.org

2.7	Hydrophobic and Dispersive Interactions in Actuators	34
2.8	Cooperativity Between Several Effectors	35
2.9	Glucose as Effector for Actuators	37
2.10	Biological-stimuli-responsive Materials	39
2.11	Conclusions	41
	Acknowledgements	43
	References	43
Chapter 3	Multi-stimuli Responsive Materials	47
	<i>Yan Ge, Ping Lv, Christoph A. Schalley and Zhenhui Qi</i>	
3.1	Introduction	47
3.2	Design Strategies and Responsive Elements	48
3.2.1	Dynamic Covalent Chemistry	49
3.2.2	Supramolecular Binding Motifs	49
3.2.3	Responsive Biomolecules and their Assemblies	53
3.3	Multi-stimuli Responsive Functional Materials	55
3.3.1	Dual Responsive Gels Based on Dynamic Covalent Bonds	55
3.3.2	Multi-stimuli Responsive Gels Based on Non-covalent Bonds	57
3.3.3	Multi-stimuli Responsive Gels Based on Biomolecules	62
3.3.4	Multi-stimuli Responsive Surfaces	64
3.3.5	Multi-stimuli Responsive Surfaces with Gradients: Vectorial Devices	69
3.3.6	Nanocarriers	71
3.4	Smart Multi-stimuli Responsive Materials	77
3.4.1	Logic Signal Processing	78
3.4.2	Towards Emergent Properties: Materials Responding to Permanently Changing Environments	84
3.5	Conclusions	88
	References	88
Chapter 4	Responsive Materials from the Self-assembly of Low Molecular Weight Gelators	96
	<i>Lisa Thomson and Dave J. Adams</i>	
4.1	Introduction	96
4.2	Gelator Design	98

<i>Contents</i>	xiii
4.3 Gelation Triggers	102
4.3.1 pH Triggers	102
4.3.2 Metal/Salt Trigger	103
4.3.3 Solvent Trigger	104
4.3.4 Temperature Trigger	105
4.3.5 Light Trigger	105
4.3.6 Enzyme Trigger	106
4.3.7 Ultrasound (Sonication)	107
4.3.8 Multiple Triggers	107
4.4 Applications	108
4.4.1 Waste Management	108
4.4.2 3D Printing	110
4.4.3 Smart Materials	112
4.4.4 Other Applications	116
4.5 Economic Importance	118
4.6 Conclusions and Outlook	118
References	119
Chapter 5 Applications of Stimuli-responsive Functional Colloids	129
<i>Charlotte E. Pugsley, Huai N. Yow, Simon Biggs and Olivier J. Cayre</i>	
5.1 Introduction	129
5.2 Stimuli-responsive Colloidal Particles	130
5.2.1 Soft Responsive Particles	130
5.2.2 Solid Core-responsive Polymer Shell Particles	133
5.3 Application-driven Examples	136
5.3.1 Chemical/Biological Sensors	136
5.3.2 Smart Emulsions and Foams	138
5.3.3 Transport Applications: Particle Responsiveness Control Interfacial Phenomena	141
5.3.4 Active Ingredient Delivery Devices	144
5.3.5 Regenerative Medicine and Imaging	150
5.3.6 Reactors	151
5.3.7 Optical Applications	152
5.3.8 Photo-patterning for Electronic Applications	154
5.4 Conclusions	156
List of abbreviations	156
References	158

Chapter 6	Responsive Layer-by-layer Films	170
	<i>Sry D. Hujaya, Benjamin M. Wohl, Johan F. J. Engbersen and Jos M. J. Paulusse</i>	
6.1	Introduction	170
6.2	LbL Fabrication-specific Responsiveness	172
6.2.1	Physical Deposition Aspects	177
6.2.2	Post-assembly Treatment	183
6.2.3	Multilayer Architecture-specific Responsiveness	186
6.3	Polymer-specific Responsiveness	189
6.3.1	Disruption of Multilayers with Responsive Polymers	190
6.3.2	Multilayers Composed of Inherently Active, Responsive, or Degradable Polymers	192
6.3.3	Responsive Multilayers Through Specific Disruption of Inter-layer Bonds	197
6.4	Conclusions and Prospects	199
	List of Abbreviations	201
	References	202
Chapter 7	Target Molecule-responsive Hydrogels	223
	<i>Takashi Miyata</i>	
7.1	Introduction	223
7.2	Molecule-responsive Hydrogels Using Changes in Physicochemical Properties	225
7.2.1	Design Using pH- or Temperature-responsive Polymers	225
7.2.2	Design Using Enzymatically Derived/ Eliminated Charged Groups	228
7.3	Molecule-responsive Hydrogels Using Structural Changes in Networks	230
7.3.1	Design Using Enzymatic Cleavage of Networks	230
7.3.2	Design Using Molecular Complexes as Dynamic Crosslinks	234
7.3.3	Design Using Molecular Imprinting	241
7.4	Micro- and Nano-sized Molecule-responsive Hydrogels	246
7.4.1	Molecule-responsive Particles	246
7.4.2	Molecule-responsive Layers	249
7.4.3	Molecule-responsive Microdevices	254

7.5	Conclusions	255
	Abbreviations	256
	References	257
Chapter 8	Polysaccharide-based Smart Materials	262
	<i>Zhiling Zhao, Tianhao Chen, Yuan Xiong, Jinyang Li, Xiao-Wen Shi, William E. Bentley, Xue Qu and Gregory F. Payne</i>	
8.1	Introduction: Historical Perspective of Polysaccharides	262
8.2	Why Polysaccharides? General Advantages	264
8.3	Common Features that Make Polysaccharides “Smart”	264
	8.3.1 Stimuli-responsive Self-assembly	265
	8.3.2 Bio-specific Interactions	266
	8.3.3 Nanoscale and Hierarchical Supramolecular Assembly	269
8.4	Limitations and Challenges with Polysaccharides	269
8.5	Chemical Modification of Polysaccharides	271
8.6	Relevant Interaction Mechanisms for Polysaccharides	271
	8.6.1 General Interactions: Solvent and Electrostatic	271
	8.6.2 Acid–Base Interactions for Weak Polyelectrolytes	273
	8.6.3 Specific Ion Interactions	275
	8.6.4 Specific Supramolecular Interactions	276
	8.6.5 Bio-specific Interactions	276
	8.6.6 Specialized Chemical Reactions	276
8.7	Example: Chitosan	277
	8.7.1 Food Applications	277
	8.7.2 Films and Capsules	278
	8.7.3 Fabrication using Electrodeposition	281
	8.7.4 Quinone-based Modifications of Chitosan	283
8.8	Example: Alginate	285
	8.8.1 Electrically Induced Gelation and Dissolution	285
	8.8.2 Enzymatically Induced Gelation and Dissolution	287
	8.8.3 Fabrication Technologies	289
8.9	Dual Responsive Polysaccharide Networks	289

8.10	Conclusions and Future Perspectives	292
	Acknowledgements	292
	References	293
Chapter 9	Cyclodextrin-based Chemo- and pH-responsive Polymer Systems for Pharmaceutical and Biomedical Applications	298
	<i>Akihito Hashidzume, Yuri Kamon and Akira Harada</i>	
9.1	Introduction	298
9.2	Categories of Cyclodextrin-based Stimuli-responsive Polymer Systems	299
9.3	The Mechanism of Stimuli-responsiveness of Cyclodextrin-based Stimuli-responsive Polymer Systems	300
9.4	Chemical and pH Stimuli for Cyclodextrin-based Polymer Systems	301
9.5	Examples of Cyclodextrin-based Chemo- and pH-responsive Polymer Systems for Pharmaceutical and Biomedical Applications	301
	9.5.1 Controlled Release	301
	9.5.2 Change in Aggregation Behavior	316
	9.5.3 Hydrogels	323
	9.5.4 Macroscopic Self-assembly	327
	9.5.5 Self-healing Materials	331
9.6	Concluding Remarks	336
	Abbreviations	337
	References	338
Chapter 10	Responsive Peptide-based Materials: Stimulation by Chemical and Biological Signals	343
	<i>M. P. Khalily, B. E. I. Ramakers, H. Guo and D. W. P. M. Löwik</i>	
10.1	Introduction	343
10.2	pH-induced Changes	346
	10.2.1 α -Helix	346
	10.2.2 β -Sheet	348
	10.2.3 Peptide Amphiphiles	349
10.3	Ion-induced Changes	353
	10.3.1 α -Helix	353
	10.3.2 β -Sheet	355
	10.3.3 Peptide Amphiphiles	356
10.4	Redox-induced Changes	361
	10.4.1 α -Helix	361

<i>Contents</i>	xvii
10.4.2 β -Sheet	361
10.4.3 Peptide Amphiphiles	363
10.5 Biological Stimuli	365
10.5.1 α -Helix	365
10.5.2 β -Sheet	367
10.5.3 Peptide Amphiphiles	368
10.6 Conclusion and Prospects	370
References	371
Chapter 11 Responsive Membranes	378
<i>Mahmood Jebur, Xianghong Qian and S. Ranil Wickramasinghe</i>	
11.1 Introduction	378
11.2 pH-responsive Membranes	380
11.3 Ionic Strength Responsive Membranes	394
11.4 Biologically Responsive Polymer Systems	398
11.4.1 Antigen-responsive Membranes	398
11.4.2 Redox/Thiol-responsive Membranes	399
11.4.3 Enzyme-responsive Membranes	400
11.4.4 Glucose-responsive Polymers	401
11.5 Insights from Quantum Mechanical and Molecular Mechanical Simulations	403
11.6 Outlook	408
Acknowledgements	408
References	408
Chapter 12 Polymer Brushes with Chemical Responses	413
<i>Elza Chu and Alexander Sidorenko</i>	
12.1 Polymer Brushes	413
12.1.1 Early Studies and Models	414
12.1.2 Synthesis of PB	416
12.1.3 PB of Complex Architecture	417
12.2 Responses in Polymer Brushes	419
12.2.1 Mechanisms of Response	419
12.2.2 Triggered Response	420
12.3 Responsive Polyelectrolyte Brushes	421
12.3.1 Basic Stimuli and Responses in PEB	422
12.3.2 Mechanical Responses of PEB	424
12.3.3 Surface Properties of PEB: Adhesion and Friction	426

12.4	Polymer Brushes with Electrochemical Response	428
12.4.1	Electrochemical Gating of PEB	428
12.4.2	Non-covalent Modifications of PEB with RedOx Species	429
12.4.3	Covalently Attached Pendant RedOx Sites	430
12.5	Complex Chemoresponsive PB	431
12.5.1	Mixed Brushes and Polyampholytes	433
12.5.2	Mosaic PB and CORALS	433
12.5.3	PB on Non-planar Substrates	434
12.5.4	Bioadhesion: Cells and Proteins	435
12.6	Brief Summary and Application Remarks	436
	Abbreviations and Acronyms	437
	References	439
Chapter 13 Chemoresponsive Mesoporous Silica Nanoparticles for Targeted Drug Delivery in Cancer Therapy		451
	<i>Montserrat Colilla and María Vallet-Regí</i>	
13.1	Introduction	451
13.2	Selective Targeting	453
13.2.1	Passive Targeting	453
13.2.2	Active Targeting	456
13.2.3	Tumour Penetration	458
13.3	Stimuli-responsive Drug Delivery	464
13.3.1	pH-responsive Drug Delivery	464
13.3.2	Enzyme-responsive Drug Delivery	469
13.3.3	Small Molecule-responsive Drug Delivery	472
13.3.4	Redox-responsive Drug Delivery	476
13.3.5	Multi-stimuli-responsive Drug Delivery	481
13.4	Future Prospects	483
	References	483
Chapter 14 Chemoresponsive Molecularly Imprinted Polymers		499
	<i>S. Carrasco and A. Rico-Yuste</i>	
14.1	Introduction	499
14.2	State of the Art	501
14.3	Fabrication of Stimuli-responsive MIPs	505
14.3.1	Synthetic Approaches	505
14.3.2	Parameters Affecting the Synthesis	507
14.3.3	Selection of Building Blocks Looking for Responsivity	510
14.3.4	MIP Formats	512

<i>Contents</i>	xix
14.4 Stimuli-responsive MIPs	516
14.4.1 Physical Stimuli Inducing Chemical Modifications	516
14.4.2 Biomolecule-responsive MIPs	527
14.5 Future Trends and Final Remarks	533
Abbreviations	534
Acknowledgements	535
References	535
Chapter 15 Chemo-responsive Self-motion by an Interplay of Micro- and Macroscopic Dynamics	542
<i>Akihisa Shioi, Daigo Yamamoto and Yasunao Okamoto</i>	
15.1 Introduction	542
15.2 Periodic Motion of a Float Driven by Marangoni Instability	544
15.3 Synchronization and Entrainment of Chemo-mechanical Oscillators	549
15.4 The Clock Reaction as a Chemical Oscillation Driving a Droplet	557
15.5 Summary	562
References	563
Chapter 16 Piezoelectric Chemosensors and Multisensory Systems	567
<i>Tatiana Kuchmenko and Larisa Lvova</i>	
16.1 Introduction	567
16.2 Piezoresonator Structure and Function	569
16.2.1 Piezoelectric Resonator Operating Principles	569
16.2.2 QMB Coatings	572
16.3 Piezoelectric Chemosensors Applications	574
16.3.1 Sorption Detectors	574
16.3.2 The Reaction Kinetics and Film Thickness Estimation	575
16.3.3 Gas Sorption Isotherms	575
16.3.4 Immunosensors for Biosystems Analysis and Diseases Diagnostics	576
16.3.5 Piezoquartz Sensors for Analysis of Gaseous and Liquid Media	577
16.4 QMB Multisensor Arrays and the “Electronic Nose”	579
16.4.1 “E-nose” Operation Principle	579
16.4.2 “E-nose” Practical Application	585

16.5	Further Trends in Piezoelectric Chemosensors and Artificial Intelligence Sensing Systems Development and Application	585
16.6	Other “E-noses”	588
16.7	Conclusions	589
	References	589
Chapter 17	Mechanoresponsive Functional Polymer Materials	604
	<i>L. P. Niggemann and R. Göstl</i>	
17.1	The History of Polymer Mechanochemistry and the Mechanophore Concept	604
17.2	Principal Reaction Pathways of Mechanophores	605
17.2.1	Homolytic Bond Scission	605
17.2.2	Heterolytic Bond Scission	607
17.2.3	Formally Pericyclic Reactions	608
17.2.4	Non-covalent Bond Scission Reactions	611
17.2.5	The Mechanical Bond	612
17.3	Methods to Exert Force on Polymers	613
17.3.1	Activation of Single Molecules	613
17.3.2	Activation in Solution	614
17.3.3	Activation of Solid Systems	616
17.4	Activation of Chemical Functions by Force	619
17.4.1	Formation of Stoichiometrically Reactive Species	619
17.4.2	Formation of Catalytically Active Species	622
17.4.3	Release of Small Molecules	623
17.5	Force-sensing Using Optically Active Mechanophores	626
17.5.1	Absorption	626
17.5.2	Fluorescence	628
17.5.3	Aggregachromic Mechanophores	631
17.6	Conclusion	631
	References	631
	Subject Index	637
