Chapter 1 A Fundamental Approach Towards Carbon Dioxide Conversion to Chemicals and Fuels: Current Trends for CO₂ Utilization Technologies	1
<i>Mufeedah Muringa Kandy and Muniyandi Sankaralingam</i>	
1.1 Introduction	1
1.2 CO ₂ Mitigation	5
1.2.1 Electrochemical Reduction of CO ₂	6
1.2.2 CO ₂ Adsorption on Electrocatalyst Surface	7
1.2.3 Confines and Current Approaches	8
1.2.4 Design of Electrocatalyst for Enhanced Electrocatalytic Reduction of CO ₂	9
1.3 Photocatalytic CO ₂ Reduction	14
1.3.1 Confines and Current Approaches	15
1.3.2 Design of Photocatalyst	17
1.4 Thermo Catalytic Conversion of CO ₂	21
1.4.1 Synthesis of CO Through Reverse Water Gas Shift Reaction	22
1.4.2 CH ₃ OH Synthesis	23
1.4.3 CO ₂ Methanation	23
1.5 Biological Mitigation of CO ₂	25
1.5.1 D-Ribulose-1,5-biphosphate Carboxylase/Oxygenase Enzyme	25
1.5.2 Dehydrogenase Enzymes	26
1.5.3 CO Dehydrogenase Enzyme	27
1.5.4 Formate Dehydrogenase Enzyme	27

2D Nanomaterials for CO₂ Conversion into Chemicals and Fuels

Edited by Kishor Kumar Sadasivuni, Karthik Kannan, Aboubakr M. Abdullah and Bijandra Kumar

© The Royal Society of Chemistry 2022

Published by the Royal Society of Chemistry, www.rsc.org

1.5.5	Formaldehyde Dehydrogenase Enzyme	28
1.5.6	Alcohol Dehydrogenase	29
1.6	Conclusion	29
	Acknowledgements	30
	References	30
Chapter 2	Synthesis and Characterization of Two Dimensional Materials	36
	<i>Jyoti Gupta, Prachi Singhal and Sunita Rattan</i>	
2.1	Introduction	36
2.2	Different Types of 2-D Materials	39
2.2.1	Graphene	40
2.2.2	Transition Metal Chalcogenides	40
2.2.3	Topological Materials	40
2.2.4	Black Phosphorous	40
2.2.5	Hexagonal Boron Nitride	40
2.3	Synthesis Method of 2-D Materials	41
2.3.1	Top-down Techniques	41
2.3.2	Bottom-up Approach	46
2.4	Material Characterizations	50
2.4.1	Scanning Electron Microscopy	50
2.4.2	Transmission Electron Microscopy	51
2.4.3	Atomic Force Microscopy	52
2.4.4	Raman Spectroscopy	52
2.4.5	Energy Dispersive X-ray Analysis	54
2.4.6	X-ray Diffraction Spectroscopy	54
2.5	Concluding Remarks	55
	List of Abbreviations	55
	Acknowledgements	55
	References	55
Chapter 3	Synthesis of Two-dimensional Hybrid Materials, Unique Properties, and Challenges	64
	<i>Yashdi Saif Autul, Rowfi Khan, Muhammad Ifaz Shahriar Chowdhury, Md Enamul Hoque and Suresh Sagadevan</i>	
3.1	Introduction	64
3.2	CO ₂ Reduction in the Presence of Hybrid Nanomaterials through Electrocatalysis Process	65
3.3	CO ₂ Reduction in the Presence of Hybrid Nanomaterials through the Photocatalysis Process	66
3.4	Graphene Oxides (GOs)	68
3.5	Two-dimensional Transitional Metal Dichalcogenides	69

3.5.1	Synthesis of TMDs through the Different Process	70
3.5.2	Properties of TMDs	72
3.5.3	Applications	74
3.5.4	Classification of 2D TMD Hybrid Nanomaterials for Generation of Energy	77
3.6	Metal Carbides/Carbonitrides (MXenes)	79
3.6.1	Synthesis	80
3.6.2	Properties	80
3.6.3	Applications	80
3.7	Graphene and Metal Oxides Hybrid	81
3.7.1	2D Stable MAX Supported Multiheterojunction Protonated Graphitic Carbon Nitride (pg-C ₃ N ₄)/Ti ₃ AlC ₂ /TiO ₂ Photocatalyst (Z-Scheme)	81
3.7.2	2D/2D/0D TiO ₂ /C ₃ N ₄ /Ti ₃ C ₂ Composite MXene Photocatalyst (S-Scheme)	82
3.7.3	Mesoporous TiO ₂ 's Hierarchical Structure on 3D Graphene along with MoS ₂	82
3.7.4	Graphene-wrapped Pt/TiO ₂ Photocatalysts	82
3.7.5	Surface Modified Heterojunction Photocatalysts of TiO ₂ /rGO/CeO ₂	83
3.8	Molecular Catalysts/Carbon Materials Nanohybrids	84
3.9	Metal Phthalocyanine Complexes	84
3.10	2D Hybrid Nanomaterials as Electrocatalysts	84
3.10.1	Modified Rhenium(I)-Pyrene Diimine Complex	84
3.10.2	Molecular Rhenium on Colloid Carbon (Imprinted) Catalyst	85
3.10.3	Heterogenized Pyridine-Substituted Cobalt(II) Phthalocyanine	85
3.10.4	Crystalline Copper(II) Phthalocyanine Catalysts	85
3.10.5	Mn-Complex Catalyst Electrode Supported by Nanocarbon Support and K ⁺ Cations	85
3.10.6	Carbon Cloth Electrodes with Immobilized Molecular Wires	86
3.10.7	A Redox-innocent Metal Center in a Heterogenized ZnPorphyrin Complex	86
3.10.8	Cobalt Phthalocyanine/Graphene Catalyst Incorporating Steric Modification	86
3.10.9	Hybrid Co Quaterpyridine Complex/Carbon Nanotube Catalytic Material	87
3.10.10	Covalently Grafted Cobalt Porphyrin on Carbon Nanotube	87

3.10.11	Electrochemically Replaced Metal Phthalocyanine, e-MPc (M = Ni, Co)	87
3.10.12	Iron Porphyrin	88
3.10.13	Pyridine-functionalized Carbon Nanotubes with Cobalt Phthalocyanine	88
3.10.14	Re(<i>t</i> Bu-bpy)(CO) ₃ Cl Maintained on Multiwalled Carbon Nanotubes	90
3.10.15	Cobalt Phthalocyanine/Carbon Nanotube Nanohybrid Structures	90
3.10.16	Metal Phthalocyanines	91
3.10.17	Copper-complex Catalytic Material (Copper(II) Phthalocyanine)	91
3.10.18	Active Cobalt Phthalocyanine	91
3.10.19	Metal Catalysts with Organic Ligands that have been Functionalized	92
3.11	MOFs and their Composites	92
3.11.1	Copper(Cu)-Based MOFs and their Composites	92
3.11.2	Fe-Based Metal–Organic Frameworks and their Composites	98
3.11.3	Co-Based Metal–Organic Frameworks and their Composites	100
3.11.4	Zn-Based Metal–Organic Frameworks and their Composites	102
3.11.5	Noble-metal-based Metal–Organic Frameworks and their Composites	103
3.12	Other Inorganic and Organic Hybrid Nanomaterials	103
3.12.1	Covalent Organic Frameworks Hybrids	103
3.12.2	Hybrids based on Metal Sulfide	103
3.12.3	Hybrids based on g-C ₃ N ₄	104
3.13	Conclusion	104
	Acknowledgements	104

Chapter 9 Photocatalytic Conversion of CO₂ Into Energy-rich Chemicals by Two-dimensional Nanomaterials	244
<i>Kayode Adesina Adegoke, Oyeladun Rhoda Adegoke, Morenike Oluwabunmi Adesina, Olugbenga Solomon Bello and Nobanathi Wendy Maxakato</i>	
9.1 Introduction	244
9.2 Process of Photocatalytic Conversion of CO ₂	246
9.3 2D Nanomaterials for Photocatalytic Conversion of CO ₂ into Energy-rich Chemicals	249
9.3.1 2D Graphitic Carbon Nitride-based Nanomaterials	249
9.3.2 2D Graphene-based Nanomaterials	256
9.3.3 2D Metal Chalcogenide-based Nanomaterials	259
9.3.4 2D Metal Oxide-based Nanomaterials	260
9.3.5 2D Metal Oxyhalide-based Nanomaterials	263
9.4 Concluding Remarks	263
Acknowledgements	265
Declaration	265

Chapter 10 Two-dimensional Based Hybrid Materials for Photocatalytic Conversion of CO₂ Into Hydrocarbon Fuels	270
<i>Khurshed B. Ansari, Arghya Banerjee, Saeikh Zaffar Hassan, Mohd. Danish, Iram Arman, Parvez Khan, A. R. Shakeelur Rahman, Qazi Naved Ahmada and Quang Thang Trinh</i>	
10.1 Introduction	270
10.2 Challenges and Opportunities of Carbon Dioxide	271
10.3 2D Hybrid Materials and Their Photocatalytic Applications	272
10.3.1 Photocatalytic Application of 2D Hybrid Materials	273
10.3.2 Hydrogen Evolution	274
10.3.3 Degradation of Pollutants	274
10.3.4 Photoelectrochemical Catalysis	274
10.3.5 CO ₂ Reduction	274
10.4 Photocatalytic CO ₂ Reduction: Principles	275
10.5 Preparation Methods of Photocatalytic 2D Hybrid Material	277

10.5.1	Graphene-based Photocatalysts	277
10.5.2	Graphitic Carbon Nitride-based (g-C ₃ N ₄) Photocatalysts	280
10.5.3	Transition Metal-oxides (TMO) and Transition Metal-chalcogenides (TMC) Based Photocatalysts	281
10.6	2D Hybrid Materials for Photocatalytic CO ₂ Conversion into Hydrocarbon Fuels	283
10.6.1	CO ₂ Reduction into Hydrocarbon Fuels Through the Photoelectrochemical Approach	283
10.7	State-of-the-art Theoretical Approach to Studying Photocatalytic CO ₂ Conversion on 2D Hybrid Materials	290
10.8	Conclusions	293
	List of Abbreviation	294
	Acknowledgements	295

Chapter 11	Catalytic Thermal Conversion of CO₂ to Fuels Using Two-dimensional Nanomaterials	301
	<i>P. Khemthong, S. Kiatphuengporn, S. Kuboon, N. Osakoo, T. Butburee, C. Yimsukanan, K. Faungnawakij and J. Wittayakun</i>	
11.1	Introduction	301
11.2	CO ₂ Hydrogenation Reaction	303
11.2.1	Graphene Family	303
11.2.2	Layered Double Hydroxides	305
11.2.3	Metal Nanosheets	306
11.3	Dry Reforming of Methane Over 2D Materials	306
11.3.1	MXenes	307
11.3.2	Siloxene	307
11.3.3	Boron Nitride Nanosheet	308
11.4	CO ₂ for Fischer-Tropsch Synthesis	309
11.4.1	Fe Species Supported on Layered-double- hydroxide Nanosheets	311
11.4.2	Fe Species Supported on Graphene Oxide	312
11.4.3	Fe Species Supported on Carbon Nanotube	312
11.5	CO ₂ to High-value Carbon Materials	313
11.5.1	Graphene	313
11.5.2	Carbon Nanotubes and Others	314
11.6	Current Status and Future Outlook of CO ₂ to Fuels Using 2D Nanomaterials	315
11.7	Concluding Remarks	316
	Acknowledgements	316

Chapter 12	Oxidative Dehydrogenation of Ethane to Ethylene Over Two-dimensional Nanomaterial Catalysts Using CO₂	320
	<i>E. M. Fayyad, K. K. Sadasivuni and A. M. Abdullah</i>	
12.1	Introduction	320
12.1.1	Ethylene – Importance, Utilization, Demand, and Feedstocks	320
12.1.2	Conventional Ethylene Production Technology – Steam, Thermal, Catalytic Cracking	322
12.2	Oxidative Dehydrogenation of Ethane	324
12.2.1	Role of Oxidant in the ODHE; O ₂ , N ₂ O, CO ₂	325
12.2.2	Reactivity and Selectivity of Catalyst – Active Site, Mechanism, Promoters	329
12.3	Traditional ODH Catalyst Upgrading	331
12.3.1	Transition-metal Oxides	331
12.3.2	Rare Earth Metal Oxides	334
12.3.3	Other Catalysts	334
12.4	Future Perspective on Catalytic ODH Reactions	335
12.5	Conclusion	335
	Acknowledgements	336
	References	336
Chapter 13	A Comparative Study of 0D, 1D, and 2D Nanocatalysts Towards CO₂ Conversion	341
	<i>Arindam Mandal and Subhasis Roy</i>	
13.1	Introduction	341
13.1.1	Principles of CO ₂ Reduction	343
13.2	Recent Progress on Nanoparticle Design and the Rise of Two-dimensional Materials	345
13.3	Important Improvements in Chemical Transformation of Carbon Dioxide	347
13.3.1	Catalytic Reduction of CO ₂	348
13.3.2	Photocatalytic Reduction of CO ₂	348
13.3.3	Electrocatalytic Reduction of CO ₂	349
13.3.4	Photoelectrocatalytic Reduction of CO ₂	350
13.3.5	Thermocatalytic Conversion	350
13.3.6	Biochemical Reduction	351
13.3.7	Reforming	351
13.3.8	Mineralization	351
13.4	Synthesis for Conventional Selective Conversions of CO ₂ Using Nano Dimensional Catalyst to Reusable Low Carbon-based Products	352

13.4.1	0D Nanomaterials	352
13.4.2	1D Nanomaterials	355
13.4.3	2D Nanomaterials	361
13.5	Conclusion	369
13.6	Future Challenges and Perspectives	369
	Acknowledgement	370
	References	370
Chapter 14	CO₂ Capture and Conversion Using Different Renewable Sources	374
	<i>Sarath Chandra Veerla and Astakala Anil Kumar</i>	
14.1	Introduction	374
14.2	CO ₂ Capture Techniques	376
14.3	Conversion of CO ₂ into Chemicals and Useful Products	379
14.3.1	Photoelectrochemical Method	379
14.3.2	Thermal Catalytic Method	382
14.3.3	Electrocatalytic Method	383
14.3.4	Biochemical Method	385
14.3.5	Radiolysis Method	386
14.4	Conclusions and Future Perspectives	387

Chapter 15	CO₂ Capture by Functionalized Two-dimensional Nanomaterials	392
	<i>N. Lakshmana Reddy, Yeon-Tae Yu, N. Ramesh Reddy, Seeram Ramakrishna and Kakarla Raghava Reddy</i>	
15.1	Introduction	392
15.2	Different Types of 2D Nanomaterials for CO ₂ Capture	394
15.3	Metal-based 2D Nanomaterials for CO ₂ Capture	395
15.3.1	MoS ₂ Based 2D Nanomaterials	395
15.3.2	Composites of MoS ₂ Nanosheets	395
15.4	Carbon-based 2D Nanomaterials for CO ₂ Capture	398
15.4.1	g-C ₃ N ₄ Nanosheets	399
15.4.2	Graphene Nanosheets	401
15.5	Conclusion and Future Outlook	404
	Acknowledgement	405
	References	405

Chapter 16 Conversion of CO₂ into Energy-dense Chemicals and the Commercialization Using Two-dimensional Nanomaterials as Catalysts	409
<i>Mohammed M. Al Hinaai and Mohammad Changez</i>	
16.1 Introduction	409
16.1.1 eCO ₂ RR Principles	410
16.2 Two-dimensional Nanomaterials and eCO ₂ RR	415
16.2.1 Transition Metals as eCO ₂ RR Catalysts	416
16.2.2 Dichalcogenide Metals as eCO ₂ RR Catalysts	419
16.2.3 Graphene Basis as eCO ₂ RR Catalysts	421
16.2.4 New eCO ₂ RR Catalysts	422
16.2.5 Current Trends in Industry Based on eCO ₂ RR	423
16.3 Reverse Microbial Fuel Cells for eCO ₂ RR	424
16.4 Conclusion	427
References	428
Subject Index	434
