Chapter 1	Polarization-enhanced Fast-pulsing Techniques	1
	<i>Bernhard Brutscher and Zsofia Solyom</i>	
1.1	Introduction	1
1.1.1	Some Basic Considerations on NMR Sensitivity and Experimental Time	2
1.1.2	Inter-scan Delay, Longitudinal Relaxation, and Experimental Sensitivity	3
1.2	Proton Longitudinal Relaxation Enhancement	6
1.2.1	Theoretical Background: Solomon and Bloch–McConnell Equations	6
1.2.2	Proton LRE Using Paramagnetic Relaxation Agents	7
1.2.3	Proton LRE from Selective Spin Manipulation	8
1.2.4	Amide Proton LRE: What Can We Get?	11
1.2.5	LRE for Protons Other Than Amides	14
1.3	BEST: Increased Sensitivity in Reduced Experimental Time	14
1.3.1	Properties of Band-selective Pulse Shapes	14
1.3.2	BEST-HSQC <i>versus</i> BEST-TROSY	18
1.3.3	BEST-optimized ¹³ C-detected Experiments	22
1.4	SOFAST-HMQC: Fast and Sensitive 2D NMR	24
1.4.1	Ernst-angle Excitation	24

1.4.2	SOFAST-HMQC: Different Implementations of the Same Experiment	26
1.4.3	UltraSOFAST-HMQC	28
1.5	Conclusions	29
	References	30
Chapter 2	Principles of Ultrafast NMR Spectroscopy	33
	<i>Maayan Gal</i>	
2.1	Introduction	33
2.1.1	One- and Two-dimensional FT NMR	34
2.2	Principles of UF NMR Spectroscopy	35
2.2.1	Magnetic Field Gradients	35
2.2.2	Generic Scheme of UF 2D NMR Spectroscopy	38
2.2.3	Spatial Encoding	39
2.2.4	Decoding the Indirect Domain Information	40
2.2.5	The Direct-domain Acquisition	42
2.3	Processing UF 2D NMR Experiments	43
2.3.1	Basic Procedure	43
2.3.2	SNR Considerations in UF 2D NMR	45
2.4	Discussion	46
	Acknowledgements	47
	References	47
Chapter 3	Linear Prediction Extrapolation	49
	<i>Jeffrey C. Hoch, Alan S. Stern and Mark W. Maciejewski</i>	
3.1	Introduction	49
3.2	History of LP Extrapolation in NMR	50
3.2.1	Broader History of LP	51
3.3	Determining the LP Coefficients	51
3.4	Parametric LP and the Stability Requirement	52
3.5	Mirror-image LP for Signals of Known Phase	53
3.6	Application	54
3.7	Best Practices	57
	Acknowledgements	58
	References	58
Chapter 4	The Filter Diagonalization Method	60
	<i>A. J. Shaka and Vladimir A. Mandelshtam</i>	
4.1	Introduction	60

<i>Contents</i>	xiii
4.2 Theory	64
4.2.1 Solving the Harmonic Inversion Problem: 1D FDM	64
4.2.2 The Spectral Estimation Problem and Regularized Resolvent Transform	68
4.2.3 Hybrid FDM	70
4.2.4 Multi-D Spectral Estimation and Harmonic Inversion Problems	71
4.2.5 Spectral Estimation by Multi-D FDM	72
4.2.6 Regularization of the Multi-D FDM	76
4.3 Examples	78
4.3.1 1D NMR	78
4.3.2 2D NMR	82
4.3.3 3D NMR	86
4.3.4 4D NMR	91
4.4 Conclusions	93
Acknowledgements	93
References	94
Chapter 5 Acquisition and Post-processing of Reduced Dimensionality NMR Experiments	96
<i>Hamid R. Eghbalnia and John L. Markley</i>	
5.1 Introduction	96
5.2 Data Acquisition Approaches	98
5.3 Post-processing and Interpretation	100
5.4 HIFI-NMR	102
5.5 Brief Primer on Statistical Post-processing	102
5.6 HIFI-NMR Algorithm	103
5.7 Automated Projection Spectroscopy	107
5.8 Fast Maximum Likelihood Method	110
5.9 Mixture Models	111
5.10 FMLR Algorithm	112
5.11 Conclusions and Outlook	114
References	114
Chapter 6 Backprojection and Related Methods	119
<i>Brian E. Coggins and Pei Zhou</i>	
6.1 Introduction	119
6.2 Radial Sampling and Projections	120
6.2.1 Measuring Projections: The Projection-slice Theorem	120
6.2.2 Quadrature Detection and Projections	123

6.3	Reconstruction from Projections: Theory	125
6.3.1	A Simple Approach: The Lattice of Possible Peak Positions	125
6.3.2	Limitations of the Lattice Analysis and Related Reconstruction Methods	128
6.3.3	The Radon Transform and Its Inverse	130
6.3.4	The Polar Fourier Transform and the Inverse Radon Transform	134
6.3.5	Reconstruction of Higher-dimensional Spectra	135
6.3.6	The Point Response Function for Radial Sampling	137
6.3.7	The Information Content and Ambiguity of Radially Sampled Data	149
6.4	Reconstruction from Projections: Practice	151
6.4.1	The Lower-value Algorithm	151
6.4.2	Backprojection Without Filtering	153
6.4.3	The Hybrid Backprojection/Lower-value Method	154
6.4.4	Filtered Backprojection	156
6.4.5	Other Proposed Approaches to Reconstruction	157
6.5	Applications of Projection–Reconstruction to Protein NMR	158
6.6	From Radial to Random	161
6.7	Conclusions	166
	Acknowledgements	167
	References	167
Chapter 7	CLEAN	169
	<i>Brian E. Coggins and Pei Zhou</i>	
7.1	Introduction	169
7.2	Historical Background: The Origins of CLEAN in Radioastronomy	170
7.3	The CLEAN Method	171
7.3.1	Notation	171
7.3.2	The Problem to be Solved	174
7.3.3	CLEAN Deconvolves Sampling Artifacts <i>via</i> Decomposition	176
7.3.4	Obtaining the Decomposition into Components	177

7.3.5	The Role of the Gain Parameter	179
7.3.6	Reconstructing the Clean Spectrum	180
7.4	Mathematical Analysis of CLEAN	181
7.4.1	CLEAN and the NUS Inverse Problem	181
7.4.2	CLEAN as an Iterative Method for Solving a System of Linear Equations	185
7.4.3	CLEAN and Compressed Sensing	193
7.5	Implementations of CLEAN in NMR	200
7.5.1	Early Uses of CLEAN in NMR	200
7.5.2	Projection–reconstruction NMR	203
7.5.3	CLEAN and Randomized Sparse Nonuniform Sampling	203
7.6	Using CLEAN in Biomolecular NMR: Examples of Applications	207
7.7	Conclusions	217
	Acknowledgements	218
	References	218
Chapter 8	Covariance NMR	220
	<i>Kirill Blinov, Gary Martin, David A. Snyder and Antony J. Williams</i>	
8.1	Introduction	220
8.2	Direct Covariance NMR	221
8.3	Indirect Covariance NMR	226
8.3.1	Principle	226
8.3.2	Unsymmetrical Indirect Covariance (UIC) and Generalized Indirect Covariance (GIC) NMR	226
8.3.3	Signal/Noise Ratio in Covariance Spectra	228
8.3.4	Artifact Detection	231
8.3.5	Applications of Indirect Covariance NMR	236
8.3.6	Optimizing Spectra for Best Application to Covariance	239
8.3.7	Applications of Covariance Processing in Structure Elucidation Problems	242
8.4	Related Methods	245
8.5	Conclusions and Further Directions	246
8.6	Computer-assisted Structure Elucidation (CASE) and the Potential Influence of Covariance Processing	247
	References	249

Chapter 9	Maximum Entropy Reconstruction	252
	<i>Mehdi Mobli, Alan S. Stern and Jeffrey C. Hoch</i>	
9.1	Introduction	252
9.2	Theory	253
9.3	Parameter Selection	257
9.4	Linearity of MaxEnt Reconstruction	258
9.5	Non-uniform Sampling	259
9.6	Random Phase Sampling	260
9.7	MaxEnt Reconstruction and Deconvolution	262
	9.7.1 J -coupling	262
	9.7.2 Linewidths	263
9.8	Perspective and Future Applications	263
	References	265
Chapter 10	Compressed Sensing ℓ_1-Norm Minimisation in Multidimensional NMR Spectroscopy	267
	<i>Mark J. Bostock, Daniel J. Holland and Daniel Nietlispach</i>	
10.1	Introduction	267
10.2	Theory	269
10.3	Algorithms	271
	10.3.1 Greedy Pursuit	273
	10.3.2 Convex Relaxation Methods	275
	10.3.3 Non-convex Minimisation	277
	10.3.4 Other Approaches	278
10.4	Implementation and Choice of Stopping Criteria	278
10.5	Terminology	282
10.6	Current Applications	283
10.7	Applications to Higher Dimensional Spectroscopy	291
10.8	Future Perspectives	299
10.9	Conclusion	300
	References	300
