

Contents

Chapter 1	Instrumental Platforms for NMR-based Metabolomics	1
	<i>Anthony C. Dona</i>	
1.1	History of NMR Hardware Development	1
1.2	Components of NMR Hardware	3
1.2.1	Magnet	3
1.2.2	Shim Coils	4
1.2.3	Sample Probe	4
1.2.4	Digital Filtering	8
1.2.5	Computational Support to Hardware	9
1.3	Automation of Metabolomic Profiling	10
1.3.1	Sample Preparation	11
1.3.2	Automated NMR	13
1.3.3	Automated Acquisition	16
1.3.4	Integrated Metabolic Profiling NMR Systems	19
	References	20
Chapter 2	NMR Pulse Sequences for Metabolomics	22
	<i>Bénédicte Elena-Herrmann</i>	
2.1	Introduction	22
2.2	Standard 1D NMR Pulses Sequences for High-throughput Metabolomics	23
2.2.1	One-dimensional ^1H NOESY Experiment	23
2.2.2	The Carr–Purcell–Meiboom–Gill (CPMG) Experiment	25
2.2.3	Diffusion-edited NMR Spectroscopy	25

2.3	Water and Solvent Suppression for NMR of Biofluids	27
2.3.1	Water Pre-saturation	27
2.3.2	Advanced Water Suppression Schemes	28
2.4	Multidimensional NMR Techniques for Metabolite Identification and Quantification	28
2.4.1	Proton Homonuclear Correlation Spectroscopy	29
2.4.2	2D ^1H - ^{13}C Heteronuclear Correlation Experiments	31
2.4.3	Metabolite Quantification from Two-dimensional NMR	32
2.5	Novel Strategies for Fast NMR Data Acquisition in Metabolomics	33
2.5.1	Non-uniform Sampling	33
2.5.2	Fast Targeted Multidimensional NMR Spectroscopy	33
2.5.3	Ultrafast 2D NMR for Metabolite Quantification	36
2.6	Conclusion	37
	References	37
Chapter 3	NMR Spectroscopy of Urine	39
	<i>Barry Slaff, Arjun Sengupta and Aalim Weljie</i>	
3.1	Introduction	39
3.1.1	NMR Spectra of Urine and Conventional Normalization to Creatinine	40
3.1.2	Early Applications: Urine NMR Metabolomics in Toxicology	43
3.1.3	Analytical Reproducibility of Urine NMR Spectra	46
3.2	NMR Spectroscopy of Urine in Metabolomics Studies	48
3.2.1	Collection and Storage of Urine Samples	48
3.2.2	Preparation of Urine Samples for NMR	53
3.2.3	Recommendations Pertaining to Urine Sample Collection, Storage and Treatment with a Focus on Diagnostic Study	56
3.2.4	One-dimensional NMR Experiments and Suppression Methods for Use with Urine	57
3.2.5	Two-dimensional NMR Experiments and Suppression Methods for Use with Urine	59
3.2.6	Normalization of Urine NMR Spectral Datasets	60
3.2.7	Multivariate Statistical Analysis of NMR Urine Spectra	63

3.3	NMR Spectroscopy of Urine: Systems Biology Applications	66
3.3.1	Metabolite Variation in Urine from Healthy Subjects	66
3.3.2	Metabolite Variation in Urine Between Healthy Population Groups	66
3.3.3	Unhealthy Pathophysiologies, Disease Diagnosis, and Pharmacometabolomics	70
3.4	Conclusion	72
	References	73
Chapter 4	NMR Spectroscopy of Serum and Plasma	85
	<i>Hector C. Keun</i>	
4.1	Introduction	85
4.1.1	Sample Composition and Metabolome Coverage	86
4.2	Methodology	89
4.2.1	Comparison of Sample Preparation Methods	90
4.2.2	Data Acquisition	94
4.3	Applications	105
4.3.1	Sample Collection and Pre-analytical Variation	105
4.3.2	Confounding and Normal Variation	107
4.3.3	Cancer	108
4.3.4	Cardiovascular Disease	110
4.3.5	Diabetes Risk	112
4.3.6	Genetic Influences on the Serum NMR Metabolome	113
4.3.7	Toxicology	114
4.4	Future Perspectives	115
	References	116
Chapter 5	High-resolution Magic-angle Spinning (HR-MAS) NMR Spectroscopy	133
	<i>Alan Wong and Covadonga Lucas-Torres</i>	
5.1	Introduction	133
5.2	HR-MAS Basic Concepts	134
5.2.1	Magnetic Susceptibility Broadening	134
5.2.2	Magic-angle Spinning	136
5.3	Hardware and Practical Considerations	138
5.3.1	Magnetic Susceptibility Components	138
5.3.2	B_0 Field Correction	138
5.3.3	B_0 Field Locking	140
5.3.4	Sample Temperature	140
5.3.5	Pulse-field Gradient	140
5.3.6	Pulse Experiments	141

5.4	Recent (HR)-MAS Developments Towards NMR-based Metabolomics	142
5.4.1	<i>In vivo</i> Studies	142
5.4.2	Slow MAS Experiments	142
5.4.3	Magic-angle Field Spinning	144
5.4.4	Microscopic Quantity	145
5.5	Concluding Remarks	147
	Acknowledgements	147
	References	147
Chapter 6	Investigation of Tumor Metabolism by High- resolution Magic-angle Spinning (HR-MAS) Magnetic Resonance Spectroscopy (MRS)	151
	<i>May-Britt Tessem, Siver A. Moestue and Tone F. Bathen</i>	
6.1	HR-MAS MRS for Studies of Metabolic Abnormalities in Cancer	151
6.2	HR-MAS MRS in Metabolic Profiling of Intact Tumor Tissue—Clinical Studies	154
6.2.1	Breast Cancer	154
6.2.2	Prostate Cancer	154
6.2.3	Brain Tumors and Brain Metastases	155
6.2.4	Other Cancer Types	156
6.3	HR-MAS MRS in Metabolic Profiling of Intact Tumor Tissue—Preclinical Disease Models	157
6.4	Technology Developments and Optimized Protocols for HR-MAS MRS Analysis	158
6.4.1	Tissue Sampling and Harvesting	158
6.4.2	Protocols and Sequences	158
6.4.3	Quantification of Metabolites Using HR-MAS MRS	159
6.4.4	Multivariate Analysis	160
6.4.5	Correlation with <i>in vivo</i> Spectroscopy	160
6.4.6	HR-MAS MRS and Gene Expression Analysis	161
6.5	HR-MAS MRS of X-Nuclei	161
6.5.1	¹³ C HR-MAS MRS	161
6.5.2	³¹ P HR-MAS MRS	162
6.6	Future Prospects of HR-MAS MRS in Cancer Metabolomics	162
	References	163
Chapter 7	NMR in Environmental and Nutritional Research	168
	<i>Toby J. Athersuch and Anisha Wijeyesekera</i>	
7.1	Introduction	168
7.2	NMR-based Analytical Methods in Environmental and Nutritional Research	170

7.2.1	Sample Types	170
7.2.2	Common NMR Spectroscopy Experiments	171
7.2.3	Practical Aspects of NMR Spectroscopic Analysis in Nutritional and Environmental Research	171
7.3	Applications of NMR-based Metabolomics in Nutritional Research	173
7.3.1	Nutritional Exposure Characterisation— Compositional Analysis of Foodstuffs	173
7.3.2	NMR-based Biomarkers of Food Consumption	174
7.3.3	Assessing the Influences of Diet on the Metabolome	176
7.4	Application of NMR-based Metabolomics in Environmental Health Research	177
7.4.1	Environmental Exposure Characterisation	177
7.4.2	Deriving Biomarkers of Environmental Exposure	178
7.4.3	Assessing the Influences of the Environment on the Metabolome	178
7.5	Summary	179
	References	180
Chapter 8	NMR Foodomics	183
	<i>Francesco Savorani, Bekzod Khakimov, Nanna Viereck and Søren Balling Engelsen</i>	
8.1	Introduction to NMR Analysis of Food	183
8.2	Sampling and Measuring Food with NMR	186
8.3	Data Analysis in NMR Foodomics Studies	193
8.3.1	Use PCA	195
8.3.2	Use Alignment	195
8.3.3	Use Intervals	197
8.3.4	Use Test Set and ROC	199
8.3.5	Use ASCA to Explore Designed Experiments	200
8.4	Selected NMR Foodomics Studies	202
8.4.1	Wine	202
8.4.2	Olive Oil	205
8.4.3	Tomato	207
8.4.4	Alginate	210
8.4.5	Milk	213
8.4.6	Cheese	219
8.4.7	Fish	221
8.4.8	Meat	225
8.5	Foodomics Outreach	226
	References	228

Chapter 9	NMR-based Metabolomics: Understanding Plant Chemistry and Identification of Biologically Active Compounds	246
	<i>M. Jahangir, T. R. Nuringtyas, K. Ali, E. G. Wilson, Y. H. Choi and R. Verpoorte</i>	
9.1	Introduction	246
9.2	What Is the Metabolome?	248
	9.2.1 Selective Extraction	248
	9.2.2 The Metabolomics Process	248
9.3	Plant Under Stress	249
	9.3.1 Host Plant Resistance	249
	9.3.2 Biotic/Abiotic Stress	251
	9.3.3 Species Characterization: Chemotaxonomy	251
9.4	Metabolomics to Evaluate Synergy	252
9.5	Bioactivity Screening	253
9.6	Food Metabolomics	255
9.7	Single-cell Metabolomics	256
	9.7.1 Limitations of Single-cell Metabolomics	258
9.8	Conclusions	259
	References	259
Chapter 10	¹H NMR-based Metabolic Profiling in Infectious Disease Research	264
	<i>Jasmina Saric, Sabrina D. Lamour and Jia V. Li</i>	
10.1	Introduction	264
10.2	Human and <i>in vivo</i> Studies	267
	10.2.1 Diagnostic and Prognostic Biomarkers	267
	10.2.2 HIV/AIDS, Tuberculosis, and Malaria	268
	10.2.3 Neglected Tropical Diseases	269
10.3	Systemic Characterisation of Parasite Effects <i>in vivo</i>	273
	10.3.1 Global Metabolic Changes in the Murine Host	273
	10.3.2 Immune–Metabolic Co-development	273
10.4	<i>In vitro</i> Studies	274
10.5	Conclusions	276
	References	277
Chapter 11	Imaging Metabolic Processes in Living Systems with Hyperpolarised ¹³C Magnetic Resonance	280
	<i>Deborah K. Hill, Erika Mariotti and Thomas R. Eykyn</i>	
11.1	Hyperpolarisation	280
11.2	Dynamic Nuclear Polarisation	283
11.3	Magnetic Resonance Detection of Hyperpolarised Metabolites	286

11.4	Deriving Kinetic Parameters	291
11.5	Biomedical Applications of DNP	295
11.6	Hyperpolarised ^{13}C Imaging <i>in vivo</i>	299
	References	303
Chapter 12	Advances in Computational Analysis of Metabolomic NMR Data	310
	<i>Timothy M. D. Ebbels, Andrea Rodriguez-Martinez, Marc-Emmanuel Dumas and Hector C. Keun</i>	
12.1	Introduction	310
12.2	Bayesian Methods in NMR Data Processing	311
12.3	Developments in Statistical Correlation Analysis	313
12.4	Statistical Association Networks	313
12.5	Genetic Mapping of Metabolic Phenotypes	317
	12.5.1 mQTL Mapping Workflow	317
	12.5.2 Lessons Learnt from mQTL Studies	318
12.6	The Role of Data Standards	319
	References	320
Chapter 13	NMR Spectroscopy of Cell Culture, Tissues, and Other Biofluids	324
	<i>Toby J. Athersuch, Chung-Ho Lau, Volker Behrends and Hector C. Keun</i>	
13.1	General Introduction	324
13.2	Sampling, Extraction and Analysis of Cellular Material	325
	13.2.1 Introduction	325
	13.2.2 Sampling Cellular Material	327
	13.2.3 Quenching Metabolism	329
	13.2.4 Extraction of Intracellular Metabolites	330
	13.2.5 NMR Spectroscopy of Cellular Materials	334
13.3	Cellular Material Profiling Applications	336
13.4	Other Biofluids	338
	13.4.1 Introduction	338
	13.4.2 Faeces	341
	13.4.3 Cerebrospinal Fluid	343
	13.4.4 Milk	345
	13.4.5 Seminal Fluid	348
	13.4.6 Bile	349
	13.4.7 Less Commonly Reported Biofluids	352
13.5	Summary and Future Developments	352
	Acknowledgements	353
	References	353
