

Index

Note: Page numbers in *italics* followed by the letters *f* or *t* refer to figures and tables, respectively.

- Absolutist view of beliefs, 120, 156
- Abstract concepts. *See* "Learning," children's definitions of; "Pretending," children's definitions of; "Science," children's definitions of; "Teaching," children's definitions of
- Abstraction
 - blessing of, 53
 - in causal graphical models, 33, 52–53
- Academic achievement, standardized metrics of, 169, 193, 296n28
- Academy of Natural Sciences (Philadelphia, PA), 283–286
 - children's exploration, reflection, and learning in, 284–286, 304n3
 - Outside In*, 284
 - partnership with, 144, 149, 284
 - pedagogical goals of, 284
- Accommodation, 24
- Action
 - abilities, development of, 70–73
 - action-based language, 283
 - learning and, 226–228
- Activation law, 49
- Active learning, 73–77
 - in adults, 12, 73–76, 86
 - guided play, 74–75
 - parental language in, 77–78
 - scaffolding, 75
 - self-generated action in, 12, 73–74
 - systematic exploration in, 18, 75–76, 196–197
- Adult reasoning
 - active learning in, 12, 73–76, 86
 - in blicket detector tasks, 131–132
 - causal inference in, 46–47
 - classic models of associative reasoning for, 32
 - confirmation bias in, 117
 - contextualization of, 136–139
 - control of variables strategy used in, 108
 - cultural and sociocultural differences in, 87–88
 - evaluativist view of beliefs, 120, 156–157
 - in hypothesis testing, 14
 - levels of explanation, 55
 - misunderstandings and pseudoscientific thinking, 4, 13, 23, 105
 - preference for reductionist explanations, 105–106
 - problem of nonindependence, 62–68
- Advanced theory of mind abilities, 120, 154, 164, 171, 273

- Agency
 children's understanding of, 11
 learning of skills and, 224
 in pretend play, 243–244, 244*t*
- Agency Only responses (pretending study), 244*t*
- Algorithmic level of explanation, 55
- Animals, nonhuman
 activity and probability of earthquakes, 105, 294n4
 associative learning in, 26, 31
 blocking in, 42
 causal reasoning capacities of, 290n4, 293n4
- Artificial intelligence (AI), 85, 272
- Assimilation, 24
- Associative reasoning, 41–45
 causal reasoning as, 26–29, 41–42, 69
 classic models of, 31–32, 290n5
 extinction, 44
 importance of, 41–42
 Rescorla-Wagner model of, 42–45, 291n12
- Attitudes Towards Science questionnaire, 191–192
- Austin Children's Museum (Austin, TX), 304n5
- Automaticity, 44, 287
- Autonomy, 229, 276
- Babies. *See* Infants
- Backward blocking, 46–47, 69, 292n14, 292n17
- Base rate information, children's use of, 47–51
- Bayesian inference, 45–51, 261
- Bayes' theorem, 48, 266
- Being a scientist, children's mindsets about, 16–17
- Belief conflict, disagreement task for, 154–164
 advanced theory of mind abilities and, 154
 design and development of, 154–157
 interpretive theory of mind, 154
 longitudinal analyses of, 162–163
 performance on, 160–162, 161
 relations with diagnostic reasoning task, 168–169
 school partnership and longitudinal sample, 158–160, 159*t*
 summary of findings, 163–164
- Belief revision
 absolutist view of beliefs, 120, 156
 child-as-scientist metaphor and, 22–26
 definition of, 172
 diagnosis and, 116–119
 domain-general processes in, 278
 evaluativist view of beliefs, 120, 156–157
 importance to scientific thinking, 18, 134
 multiplist view of beliefs, 120
 persistence of pseudoscientific beliefs and, 23–24
- Bias
 confirmation, 92, 117
 default bias to trust, 80–81
 gender, 189
 positive testing, 114
- Biology, childhood content knowledge of, 6, 7
- Blessing of abstraction, 53
- Blicket detector, causal inference studies with, 19, 28–29, 37–41, 96
 causal illusion in, 254–255
 complexity of, 98–103, 102
 design and development of, 37–40, 37, 291nn10–11, 295n1, 303n10
 diagnosis and belief revision in, 116–119
 learning from exploration and play in, 115–116
 metacognition in, 120–121
 observation versus generation of data in, 107–109

- one-cause trials using, 39–42, *40f*, 44–45
- potential objections to, 272
- study participants in, 97–99
- two-cause trials using, 40–42, *41f*, 43–44
- use of scientific content in, 103–106
- Blicket detector, diagnostic reasoning studies with
 - adults' performance on, 131–132
 - butterfly version of, 143–147, *145f*, *146f*, *147t*
 - children's performance on, 132–133
 - design of, 127–131, *128*
 - dinosaur version of, 149–152, *150f*, 295n3
 - experimental control for, 295n2
 - first graders tested in 2015, 164–167
 - first graders tested in 2017, 167
 - further uses of, 133–134
 - goals of, 125–127, 133
 - potential objections to, 272
 - relations to standardized metrics of academic achievement, 169–170
 - relations with definitions of “science,” 194–196
 - relations with disagreement task, 168–169
 - relation to science education, 171–173
 - third graders tested in 2017, 167–168
- Blocking
 - backward, 46–47, 69, 292n14, 292n17
 - counterfactual reasoning and, 261
 - Rescorla-Wagner model of, 42–45, 291n12
- Butterfly version of blicket detector task, 143–147, *145f*, *146f*, *147t*
- Causal chain structure, 62, *63f*, *65f*
- Causal complexity, 116, 126, 133, 153, 197. *See also* Diagnostic reasoning task
- Causal graphical models, 18, 94, 271–272, 289n3. *See also* Blicket detector, causal inference studies with; Blicket detector, diagnostic reasoning studies with
 - abstraction in, 33, 52–53
 - active learning and, 73–77
 - associative mechanisms in, 41–45
 - definition of, 31–33
 - dependencies in, 52
 - edge replacement framework, 66–68, 103
 - faithfulness assumption in, 34–36, *34f*, *35f*, 291nn7–8
 - joint probability distributions in, 33
 - levels of explanation in, 55–60
 - limitations of, 55–56, 125
 - Markov assumption in, 36–37, *36f*, 62–66, 68–69, 261
 - mechanisms in, 51–55, *53f*
 - “noisy-or” parameterization, 52
 - nonindependence effects in, 62–68
 - origins of concept of “cause” in, 68–73, 292n3
 - usefulness in constructing explanations and making predictions, 56–60
- Causal inferences, blicket detector studies of, 19, 28–29, 37–41, 96
- causal illusion in, 254–255
- complexity of, 98–103, *102f*
- constraining of causal inferences, 29–31
- design and development of, 37–40, 37, 291nn10–11, 295n1, 303n10
- diagnosis and belief revision in, 116–119
- learning from exploration and play in, 115–116
- metacognition in, 120–121
- observation versus generation of data in, 107–109
- one-cause trials using, 39–42, *40f*, 44–45
- potential objections to, 272
- study participants in, 97–99

- Causal inferences (cont.)
 two-cause trials using, 40–42, 41*f*, 43–44
 use of scientific content in, 103–106
- Causality
 assumptions about, 49
 children’s understanding of, 10–12, 68–69, 72, 246, 262, 277
 conjunctive versus disjunctive, 52, 54, 87, 98, 100
 generative, 108
 illusions of, 254–255
 interactive, 130, 133, 190, 287
 nativist theories of, 68
 origins of concept of, 68–73, 292n3
- Causal learning, 13
 causal parameters in, 47
 conditional probability information
 necessary for, 109
 constraining, 30, 53
 engagement in, 18
 integrating cultural and sociocultural
 approaches with, 85–89
 parental influence on, 76–77
 self-generated data in, 73
 “specific” versus “framework” theories
 in, 52
- Causal perception, development of, 69, 254–255
- Causal reasoning. *See also* Causal graphical models; Causal inferences, blicket detector studies of; Contextualization; Metacognitive thinking
 as associative learning, 26–29, 41–45, 69
 childhood development of, 11–13, 18–19
 conjunctive causal relations, 52, 54, 87, 98
 constraints in, 276–279
 content knowledge and, 5–10, 50
 counterfactual reasoning, 277–278
 definition of, 15
 development of, 18
 disjunctive causal relations, 52, 54, 87, 100
 enabling conditions in, 276–279
 as foundation of scientific thinking, 18–19, 93–96, 271, 273–274
 imagination and, 252–254
 science education and, 171–173
 scientific thinking as form of, 10–11
- Causal structures, 11. *See also* Causal graphical models
 causal chain, 62
 common cause, 62–68, 63*f*, 65*f*
 common effect, 62
 of decontextualized tasks, 103
 learning, 74, 98
 possible structures, 253
 theories as representations of, 25–26, 45
- “Cause,” concept of, 68–73, 292n3
- Character-based justifications, 157
- Characteristic-to-defining shift, 179
- Child-as-scientist metaphor, 125
 definition of, 12–13
 description of, 21–24
 examples of, 21–22, 290n1
 vagueness of, 24–26, 61
- Children’s Discovery Museum (San Jose, CA), 304n5
- Clarke, Arthur C., 142
- Classic models of associative reasoning, 31–32, 290n5
- Climate change, public debate about, 4, 23–24
- Clipboards, as characteristic of scientists, 25, 290n2
- Closed-ended questions, in “What Is Science?” interview, 199–203
 composite scores, 202–203, 202*t*
 percent agreement by age group, 199–202, 201*t*
 relations with open-ended questions, 203

- Coding categories
 “What is learning?” study, 220
 “What is playing?” study, 229–231, 230
 “What Is Science?” interview, 185–194, 187*t*, 188*f*, 189*f*, 190*t*
- Common cause structure, 62–68, 63*f*, 65*f*
- Common effect model, 52, 53*f*, 62
- Complexity, causal, 116, 126, 133, 153, 197. *See also* Diagnostic reasoning task
- Composite scores, for “What Is Science?” interview questions, 202–203, 202*t*
- Computational level of explanation, 55
- Computational modeling, 59–60
- Conceptual change, emergence of, 265
- Conditional statements, 137–138
- Conditioned/unconditioned stimuli, associative relation between, 42–45, 291*n*13
- Confirmation bias, 92, 117
- Conflicting beliefs. *See* Belief revision
- Conjunctive causal relations, 52, 54, 87, 98
- Consciousness, 281
- Constraints, 26–31, 276–279
- Constraint-seeking questions, 91–92
- Constructing science, definition of, 272–273, 286–287
- Constructivist approaches, 12, 77
- Contact causality, infant recognition of, 68–69
- Content knowledge
 causal reasoning constrained by, 5–10, 50
 childhood development of, 5–10
 relations with skills, 276–279, 293*n*7
 theory theory view of, 21–26
- Content responses, “What is learning?” study, 220, 221
- Contextualization, 19, 292*n*2
 in butterfly version of blicket detector task, 143–147, 145*f*, 146*f*, 147*t*
 in causal reasoning, 142–143, 272
 comparison of contexts, 147–149
 continuum of, 135–136, 152
 “decontextualized” tasks, 103, 152
 definition of, 67
 in dinosaur version of blicket detector task, 149–152, 150*f*, 295*n*3
 fantasy and unrealistic contexts, 139–142
 role in adult reasoning, 136–139, 259
 role in development, 139–143
- Control of variables strategy, 252, 294*n*1
 concept of, 15, 93–96
 recognition of, 14, 107–108, 109–112, 116, 172
- Correlations, causal inferences from, 27–29
- Counterevidence, belief revision in light of. *See* Belief revision
