NOTES TO CONTRIBUTORS

Aims and scope of the Journal
The Cambridge Journal of Economics, founded in the tradition of Marx, Keynes, Kalecki, Joan Robinson and Kaldor, provides a focus for theoretical, applied, interdisciplinary and methodological work, with strong emphasis on realism of analysis, the development of critical perspectives, the provision and use of empirical evidence, and the construction of policy. The Editors welcome submissions in this spirit on economic and social issues such as unemployment, inflation, the organisation of production, the distribution of the social product, class conflict, economic underdevelopment, globalisation and international economic integration, changing forms and boundaries of markets and planning, and uneven development and instability in the world economy.

Submission of manuscripts
Editorial communications should be sent to the Managing Editor, Cambridge Journal of Economics, Faculty of Economics, Sidgwick Avenue, Cambridge CB3 9DD UK. Contributors are asked to submit articles in triplicate. These should not normally exceed 7500 words in length and should be accompanied by an abstract of no longer than 100 words, together with a Journal of Economic Literature classification. Submitted manuscripts will not normally be returned to authors. Authors submitting a manuscript do so on the understanding that if it is accepted for publication exclusive copyright in the article shall be assigned to the Publisher. In consideration for the assignment of copyright, the Publisher will supply 20 offprints of each article.

Layout. All copies must be typed in Journal style (see a recent issue) on one side only of the paper (preferably A4), double spaced (including footnotes and references), with a margin of at least 1.5" on the left-hand side. Footnotes should be kept to a minimum, indicated by superscript figures in the text, and collected on a single page placed at the end of the manuscript. Tables and diagrams should be attached on separate sheets at the end of the manuscript and their position indicated in the text. Citations in the text should use the Harvard System of short references (e.g. Isenman, 1980, pp. 66-7; Brown 1975A, 1993B) with a full alphabetical list at the end in the following style:

Isenman, P. 1980. Basic needs: the case of Sri Lanka, World Development, vol. 8, no. 3 [or page nos if issue number not known]

Use of mathematics. Authors are asked to use mathematics only when its application is a necessary condition for achieving the stated objective of the paper. When mathematics is used, the necessity for doing so should be explained, and the major steps in the argument and the conclusions made intelligible to a non-mathematical reader. Wherever possible, authors are encouraged to put the mathematical parts of their argument into an appendix.

In the case of empirical articles, authors will be expected to make readily available to interested readers a complete set of data as well as details of any specialised computer programs used.

Accepted articles. Authors of articles which are accepted for publication will be asked to supply a copy on computer disk wherever possible. Authors are expected to correct proofs quickly and not to make revisions on proofs; any such revisions may be charged for by the editors. No payments are made to authors.

Comments on published articles. Before submitting a comment on any article published in the Journal a copy of the comment should be sent to the author of the original article with a request they respond to any points of possible misunderstanding. The comment should not be submitted for publication before this response has been received unless the original author does not reply within a reasonable time.

A comment should not normally be longer than 1500 words. When it is submitted (in triplicate) it should be accompanied by a statement that this preliminary procedure has been followed. It will then be refereed, and if accepted for publication a copy will be sent to the original author, who will be given the opportunity to reply in the same issue of the Journal. Any reply must be no longer than the comment itself.
Contents

The productivity convergence debate: a theoretical and methodological reconsideration  
Bruce Elmslie and William Milberg 153

Against 'big bang' in economic transition: normative and positive arguments  
Shu-ki Tsang 183

Short-period macroeconomic aspects of foreign aid
