We read with great interest in the CID 2015:61 (1 August) cost mentality and rec-
CORRESPONDENCE on 23 April 2018 by guest new era of molecular diagnostics. While we
assay represents a breakthrough shift into a technology to analyze whole blood speci-
culture. The authors state that the T2MR assay represents a potential impact of this new rapid diagnostic test on patients with candidemia. We concur with Dr John Bartlett, retired infectious diseases physician, who stated in 2010 that rapid diagnostic tests are “game changing” in the management of infectious diseases [6]. However, in 2015, we suggest a modification to his statement that rapid diagnostic tests and antimicrobial stewardship economics will “change the game” of managing patients with infectious diseases.

Note
Potential conflict of interest. Both authors: No reported conflicts.
Both authors have submitted the ICMJE Form for Disclosure of Potential Conflicts of Interest. Conflicts that the editors consider relevant to the content of the manuscript have been disclosed.
