Sentinelli F, Romeo S, Arca M, Filippi E, Leonetti F, Banchieri M, Di Mario U, Baroni MG: Human *resistin* gene, obesity, and type 2 diabetes: mutation analysis and population study. *Diabetes* 51:860–862, 2002

In the above-mentioned article, the single nucleotide polymorphism (SNP) found in the 3' untranslated region of the resistin gene was a G to A variation. It was inadvertently reported in the text as a G to C variation, also described as "G1326C." The SNP, therefore, should be reported as "G1326A" throughout the whole text, and in Table 3, the genotypes are GG, GA, and AA and the alleles are G and A.
