Erratum. Individualizing Treatment of Type 2 Diabetes After Metformin: More Insights From GRADE. Diabetes Care 2024;47:556–561 *Matthew C. Riddle*

<https://doi.org/10.2337/dc24-er06a>

In the Commentary cited above, the HbA_{1c} value calling for insulin rescue therapy was twice inadvertently given as 7.0%; the correct value of 7.5% is shown in the revised text below.

“A final analysis describes the use of rescue therapy with insulin when the originally assigned second-line treatment no longer keeps HbA_{1c} below 7.5% (14).”

“It was initiated about halfway through the study to determine why insulin was not consistently added within 6 weeks after HbA_{1c} was verified as higher than 7.5%, as required by protocol.”

The author apologizes for the errors.

The online version of the article (<https://doi.org/10.2337/dci24-0008>) has been updated to correct the values.
