Erratum

Guidelines for UK practice for the diagnosis and management of methicillin-resistant Staphylococcus aureus (MRSA) infections presenting in the community

Dilip Nathwani, Marina Morgan, Robert G. Masterton, Matthew Dryden, Barry D. Cookson, Gary French and Deirdre Lewis on behalf of the British Society for Antimicrobial Chemotherapy Working Party on Community-onset MRSA Infections

On page 993, section B ‘Serious and deep-seated MRSA infections’, subsection B2, the first alternative treatment recommendation should read:

**Alternative**: Daptomycin: 4 mg/kg intravenous once daily for complicated SSTIs and 6 mg/kg intravenous once daily for right-sided endocarditis and bacteraemia (secondary to cSSTI and/or right-sided endocarditis) caused by *S. aureus*.

The authors apologize for this error.
