CORRIGENDUM

Focal atrial tachycardia: increased electrogram fractionation in the vicinity of the earliest activation site

Ioan Liuba and Håkan Walfridsson

Department of Cardiology, University Hospital Linköping, 581 85 Linköping, Sweden

P values of $P < 0.0001$ should have been given in the abstract for the increase within the region activated during the first 15 ms of both the incidence of bipolar electrograms with multiple negative deflections and of the incidence of unipolar electrograms with multiple negative deflections. In the section 'Characteristics of electrograms in the region surrounding the earliest activation site and in the remaining atrium’ the $P$ value for bipolar voltage should be $P < 0.0001$, not $P < 0.001$. In the same section the $P$ value for the decrease of unipolar and bipolar peak-to-peak voltage should be $P < 0.0001$, not $P < 0.001$.
