If a picture is worth a thousand words, imagine the value of a story that's told with 350 pictures...

The Society of American Foresters celebrates its centennial in 2000 with the release of The Greatest Good: 100 Years of Forestry in America. This pictorial history of forestry features 350 exquisite photos, gathered from a wealth of sources. The Greatest Good proudly illustrates the innovations, the challenges and the successes for foresters and forestry, from 1900 to today.

Guidelines for Contributors

New and revised manuscripts submitted for publication and correspondence on other editorial matters should be addressed to Forest Science, attn: Janet Michaels, Manuscript Manager, Pacific Northwest Research Station, 3625 93rd Ave. SW, Olympia, WA 98512 (fscience/oop_olympia@fs.fed.us). The journal is not responsible for loss or damage of manuscripts and accompanying matter. The journal assumes no responsibility for statements and opinions expressed by its contributors.

Forest Science seeks manuscripts addressing subjects related to forestry, broadly defined, or fundamental to it. Manuscripts about forests and manuscripts about the impacts of other activities on the forest are welcome. Forest Science publishes articles, comments, review articles, discussion papers, monographs, book reviews, and announcements. The editor’s decision is final on all submissions. All published manuscripts are open to comment by the readers.

Review articles and discussion papers provide syntheses of current knowledge in broad topical areas of current importance. They may refer to current literature, including relevant literature outside of forestry, as well as to gaps in the literature, controversial questions, and research priorities. They may advance hypotheses. Review articles and discussion papers may be of any length but are usually less than 17 printed pages (approximately 17,000 words).

Book reviews may be solicited or submitted without invitation. Forest Science reviews recently published books and monographs that report results of forestry research or are of interest to scientists who investigate the biological, physical, or social attributes of the forest.

Suggestions to Contributors

Manuscripts are judged on their original contributions, on the importance of their subject matter, and on their clarity, accuracy, and conciseness. It is understood that manuscripts submitted to Forest Science have not been published and are not being considered for publication elsewhere. At the time of submission, authors must provide information describing the extent to which data or text in the manuscript have been used in other papers or books that are published, in press, submitted, or soon to be submitted elsewhere. Authors who wish to use material such as figures or tables from previous publications are responsible for obtaining permission to do so from the previous publisher(s).

Style.—Recommended style manuals are: Style Manual (U.S. Government Printing Office) and CBE Style Manual (Council of Biology Editors, Inc.). See the latter for abbreviations and symbols. Metric units are required. Consult recent issues of Forest Science for matters of form in preparing tables, figure captions, identification of authors, acknowledgments, and literature citations.

Double-space all copy, including captions and literature citations. Test all equations and proofread the entire manuscript for conformity with Forest Science style. Inadequately prepared manuscripts will be returned without review.

Manuscripts revised and returned to Forest Science more than 6 months after review will be treated as new manuscripts.

Nomenclature.—The authority for nomenclature of North American tree species is Checklist of United States Trees (Native and Naturalized), U.S. Department of Agriculture Handbook 541. The CBE Style Manual lists authorities for nomenclature of other plants and animals.

Copies.—Submit six copies of the manuscript printed one side only and one set of original figures. Use a sturdy envelope. A computer disk will be requested when the manuscript is accepted; do not send the disk with the original submission.

Guidelines for Electronic Preparation and Submission of Articles.—Please read and follow the Guidelines for Electronic Preparation and Submission of Articles (http://www.safnet.org/pubs/) before you select software to prepare text, tables, graphics, and equations. If your article is accepted, these guidelines also provide instructions for electronic submission.

Author Information.—Authors are anonymous to reviewers of manuscripts submitted to Forest Science. To preserve author anonymity, author names should appear on the title page only. The title page should include postal and e-mail addresses for all authors as well as a fax number for the corresponding author.

Page Charges

Member: (Any of the article authors can qualify for the member rate.)

First five pages $65/page
Sixth and subsequent pages $125/page

Nonmember:

First five pages $85/page
Sixth and subsequent pages $125/page

Note that the following are exempt from page charges: book reviews, letters to the editor, comments on published articles (if received within 1 year of publication and less than 350 words), authors’ reply to comments, notes of less than 150 words announcing availability of unpublished bibliographies, computer programs, and equipment blueprints. In addition, SAF members or Forest Science subscribers in foreign countries may receive a preferential rate on request.

Permission to Reprint

Individual readers, and nonprofit libraries acting for them, may make fair use of material in the journal, e.g., copying an article or portion of an article for use in teaching or research. To request permission to photocopy, contact the APS Customer Service Department, Copyright Clearance Center, Inc. (CCC), 222 Rosewood Drive, Danvers, MA 01923 (978) 750-8400; fax (978) 750-4470; www.copyright.com. For republication, or systematic or multiple reproduction of copyrighted material (including figures and article excerpts), permission must be obtained from SAF, with a fee for commercial use to be determined; contact Christina Johnson, publications assistant, johnsonc@safnet.org. In all situations, SAF requests that the senior author also be contacted. Forest Science grants permission to quote from it if the customary acknowledgment of the source accompanies the quotation. Requests for individual reprints should be directed to the author.
WE SELL DIGITAL CAMERAS. See our web site (www.regent.qc.ca) for technical and pricing information.

**NEW**

**WIN RHIZO™**

For root measurement

- Morphology and distribution: Diameter, length, projected and surface area, volume as a function of root diameter, color and soil depth.
- Topology and link analysis: Branching angle, connectivity, link classification, Fitter's topological parameters (path length, altitude, magnitude).
- Root architecture with fractals
- Color analysis
- Mycorrhizae quantification

**WIN DENDR™**

For tree-ring analysis

- Ideal for forest inventory, dendrometry, dendrochronology and growth and yield.
- Images from high resolution optical scanners
- Measures rings on disks or cones
- Ring, earlywood and latewood width
- Density or light intensity analysis
- Stem analysis
- Cross-dating

**SCANOPY™**

Canopy analysis with digital and film based fisheye imaging

**CAM™**

Color Area Meter

CAM can be trained to quantify areas of specific colors or groups of colors

Many applications:

- Fruit and vegetable diseases
- Percentage of grass coverage
- Mycorrhizae
- Aerial images

**WIN MAC SEEDLE™**

For seed and needle measurement

- Measures straight or curved needles/seeds
- Morphology (length, width, curvature, area, surface area, volume)
- Disease quantification
- Color classification

**Win Mac CELL™**

For wood cell analysis

- Automatic and interactive measurements
- Cell length and area
- Wall thickness
- High resolution digital camera (and microscope)

**Specialized software, general hardware**

Draft measurement

Morphology (area, width, blade and petiole measurements)

- Diseases
- Insect Damage
- Analyses leaves or foliar disks

Regent's products come with a fast turn around within 24 hours and competence and responsive after sale service.

ONE SCANNER OR CAMERA, MANY APPLICATIONS

Regent's products are based on optical scanners. They produce excellent images and can be shared between different scientific or general applications. Regent has designed accessories that make scanning easier and faster.

Other systems based on digital video cameras.
