### Papers

723 OpenGeneMed: a portable, flexible and customizable informatics hub for the coordination of next-generation sequencing studies in support of precision medicine trials  
Alison Polimeno, Yingdong Zhao, Sheng-Chang Li, Rick F. Pelley and Richard M. Simon

735 Comparison of methods to detect differentially expressed genes between single-cell populations  
Alvaro E. Jover, Francesco Dettling and Simona Spiazzi, Gail A. Wolters and Ann L. Zee

744 Systematic bias of correlation coefficient may explain negative accuracy of genomic prediction  
Yao Zhou, M. Rebek Vehicle, Annure Wang and Zhiguo Zhang

754 Evo-Devo-Epi: a genome-wide search platform for epistatic control on the evolution of development  

761 Comparative pan-cancer DNA methylation analysis reveals cancer common and specific patterns  
Xiaolei Yang, Lin Gao and Shihua Zhang

774 BrowseVCF: a web-based application and workflow to quickly prioritize disease-causative variants in VCF files  
Silvia Salatino and Yaron Karmi

780 Screening and validation of IncRNAs and circRNAs as miRNA sponges  
Giuseppe Militello, Tyler Weirick, David John, Claudia Döring, Stefanie Oettmeier and Shizuka Uchida

789 Identification and function annotation of long intervening noncoding RNAs  
Huihui Lu, Dachun Bu, Lujuan Sun, Shuangshuang Pan, Shuying Lu and Yi Zhou

798 Protein-protein interactions: detection, reliability assessment and applications  
Xiaoming Peng, Jiawen Wang, Wei Peng, Yang-Kong Wu and Yi Pan

802 Computational models for predicting drug responses in cancer research  
Francisco Arroyo

830 TBC2health: a database of experimentally validated health-beneficial effects of tea bioactive compounds  
Shihua Zhang, Hongdong Xuan, Liang Zhang, Sicong Fu, Yijun Wang, Hua Yang, Yuling Tai, Youhong Song, Jinsong Zhang, On-Sung No, Shuwen Li and Xiaochun Wan

837 Comparative assessment of differential network analysis methods  
Yuriee Iizuka, Karin Zimmermann, Bernt Høiland-Madsen, Biba Leزع, Michael Himmel and Ulf Leser

851 Deep learning in Bioinformatics  
Seonwoo Min, Byunghan Lee and Sungroh Yoon

### Software Review

870 Graphics processing units in bioinformatics, computational biology and systems biology  
Mauro S. Noble, Paolo Cazanave, Andreo Tanugil and Daniela Briones

### Paper

886 Gene Ontology semantic similarity tools: survey on features and challenges for biological knowledge discovery  
Gaston K. Marando, Emile R. Chenzira and Nicolo’ M. Mulder

902 Corrigendum

903 Corrigendum

904 Corrigendum

905 Erratum

906 Erratum
Aims

The aim of Briefings in Bioinformatics is to provide an indispensable resource for the experimental practitioner seeking awareness of the disparate sources of data and analytical tools of contemporary biology, biotechnology and medicine based on the molecular level. This includes all areas of genomics, proteomics, metabolomics, interactomics and network biology, imaging, systems biology, chemoinformatics, computational biology and clinical/medical informatics that have a molecular foundation to the study. Large-scale instrumentation and computerisation is reducing the time that needs to be spent in the laboratory. Instead, the rate-limiting step is the analysis and interpretation of data. The journal provides topical reviews of new methodologies as they become established.

The Editors, Martin Bishop and Russ Altman, welcome the submission of review papers and case studies for publication. Essential criteria for the publication of papers are that they provide practical guidance to the users of bioinformatics software and databases to supplement available manuals and tutorials, providing a brief conceptual review and overview of the problem addressed, its solution, dynamic range and limitations. We publish reviews of clearly defined subject areas for both experimental biologists and for bioinformatics specialists. Reviews may be broader or more narrowly focussed but must cover a variety of approaches to a very well-specified biological problem or research area. We do not publish work on new methods that have not yet been described elsewhere. Please do not submit manuscripts concerning original research as they will be immediately rejected.

Some areas that members of the Editorial Board have identified as important and presently under represented in the pages of the Journal include the complex fields of epigenetics and the construction of evolutionary models and the elucidation of evolutionary relationships. Methodological approaches of interest include software comparison and benchmarking, data cleaning and curation, accuracy of predicted and extracted information, ontologies and text-mining, solutions that allow for the large-scale analysis of biological data in reasonable time (high performance computing solutions and cloud systems), standards, training and change management activities, and the determination of causal relationships from data. There was specific mention of the use of ontologies for semantic-based analysis of molecular data and interaction networks, methods and tools for the automatic or semiautomatic annotation of biological data with terms extracted from ontologies, and methods and tools for enrichment analysis. Articles focusing on illuminating the bottleneck problems in important bioinformatics approaches will be especially helpful to readers. It must be emphasized that these comments are suggestions and are not intended to be prescriptive. As science advances the details of what is important changes and the Editors, Editorial Board and Reviewers will be flexible in their policies.

Types of Submission

Submissions of the following types are accepted for review in the Journal:

- Review articles (2000–7000 words)
- Protocols for solving a specific problem using different sets of programs (2000–5000 words)
- Case studies in biological research applied to clinical practice (2000–5000 words)
- Opinion articles: topical or controversial areas that do not warrant a full review (200–1000 words)
- Letters to the Editors (relating to a topic previously published in the Journal) (200–1000 words)
- Software and website reviews (by authors other than the originator) (500–1000 words)
- Book reviews (500–1000 words)
