907 Editorial

Papers
906 Benchmarking computational tools for polymorphic transposable element detection
Lavanya Rishishwar, Leonardo Mariño-Ramírez and I. King Jordan

919 Alignmap: an R package for genetic linkage analysis in allohexaploids
Kai Zha, Hao Li, Minlin Yu, Yabing Jiang, Mingming Yang and Renjun Wu

926 What is the probability of replicating a statistically significant association in genome-wide association studies?
Wei Jiang, Jing-Hao Xue and Weichuan Yu

935 AlloMap6: an R package for genetic linkage analysis in allohexaploids
Xuli Zhu, Huan Li, Meixia Ye, Libo Jiang, Mengmeng Sang and Rongling Wu

944 What is the probability of replicating a statistically significant association in genome-wide association studies?
Wei Jiang, Jing-Hao Xue and Weichuan Yu

953 Characterization of MinION nanopore data for resequencing analyses
Alberto Magi, Betti Giusti and Lorenzo Tattini

962 Rare variant association test in family-based sequencing studies
Xuefeng Wang, Zhenyu Zhang, Nathan Morris, Tianxi Cai, Seunggeun Lee, Chaolong Wang, Timothy W. Yu, Christopher R. Mohlke and Hong Liu

971 Rare variant association test in family-based sequencing studies
Xuefeng Wang, Zhenyu Zhang, Nathan Morris, Tianxi Cai, Seunggeun Lee, Chaolong Wang, Timothy W. Yu, Christopher R. Mohlke and Hong Liu

980 What is the probability of replicating a statistically significant association in genome-wide association studies?
Wei Jiang, Jing-Hao Xue and Weichuan Yu

990 What is the probability of replicating a statistically significant association in genome-wide association studies?
Wei Jiang, Jing-Hao Xue and Weichuan Yu

Software Review
1012 Unraveling chloroplast transcriptomes with ChloroSeq, an organelle RNA-Seq bioinformatics pipeline
David Roy Smith and Matheus Sanitá Lima

Opinion Note
1017 Recording negative results of protein–protein interaction assays: an easy way to deal with the biases and errors of interactomic data sets
David Alvarez-Ponce

Papers
1021 Recent advances in sequence-based protein structure prediction
Dukka B. KC

1033 Protein side-chain packing problem: is there still room for improvement?
José Colbes, Rosario I. Corona, Christian Lezcano, David Rodríguez and Carlos A. Brizuela

1044 Exploring and visualizing multidimensional data in translational research platforms
William Dunn, Anita Burgun, Marie-Odile Krebs and Bastien Rance

1057 A protein network descriptor server and its use in studying protein, disease, metabolic and drug targeted networks
Peng Zhang, Lin Tao, Xian Zeng, Chu Qin, Shangying Chen, Feng Zhu, Zerong Li, Yuyang Jiang, Weiping Chen and Yu-Zong Chen

1066 A protein network descriptor server and its use in studying protein, disease, metabolic and drug targeted networks
Peng Zhang, Lin Tao, Xian Zeng, Chu Qin, Shangying Chen, Feng Zhu, Zerong Li, Yuyang Jiang, Weiping Chen and Yu-Zong Chen

1075 A protein network descriptor server and its use in studying protein, disease, metabolic and drug targeted networks
Peng Zhang, Lin Tao, Xian Zeng, Chu Qin, Shangying Chen, Feng Zhu, Zerong Li, Yuyang Jiang, Weiping Chen and Yu-Zong Chen

1084 A protein network descriptor server and its use in studying protein, disease, metabolic and drug targeted networks
Peng Zhang, Lin Tao, Xian Zeng, Chu Qin, Shangying Chen, Feng Zhu, Zerong Li, Yuyang Jiang, Weiping Chen and Yu-Zong Chen

1093 A protein network descriptor server and its use in studying protein, disease, metabolic and drug targeted networks
Peng Zhang, Lin Tao, Xian Zeng, Chu Qin, Shangying Chen, Feng Zhu, Zerong Li, Yuyang Jiang, Weiping Chen and Yu-Zong Chen

1093 A protein network descriptor server and its use in studying protein, disease, metabolic and drug targeted networks
Peng Zhang, Lin Tao, Xian Zeng, Chu Qin, Shangying Chen, Feng Zhu, Zerong Li, Yuyang Jiang, Weiping Chen and Yu-Zong Chen
The aim of Briefings in Bioinformatics is to provide an indispensable resource for the experimental practitioner seeking awareness of the disparate sources of data and analytical tools of contemporary biology, biotechnology and medicine based on the molecular level. This includes all areas of genomics, proteomics, metabolomics, interactomics and network biology, imaging, systems biology, chemoinformatics, computational biology and clinical/medical informatics that have a molecular foundation to the study. Large-scale instrumentation and computerisation is reducing the time that needs to be spent in the laboratory. Instead, the rate-limiting step is the analysis and interpretation of data. The journal provides topical reviews of new methodologies as they become established.

The Editors, Martin Bishop and Russ Altman, welcome the submission of review papers and case studies for publication. Essential criteria for the publication of papers are that they provide practical guidance to the users of bioinformatics software and databases to supplement available manuals and tutorials, providing a brief conceptual review and overview of the problem addressed, its solution, dynamic range and limitations. We publish reviews of clearly defined subject areas for both experimental biologists and for bioinformatics specialists. Reviews may be broader or more narrowly focussed but must cover a variety of approaches to a very well-specified biological problem or research area. We do not publish work on new methods that have not yet been described elsewhere. Please do not submit manuscripts concerning original research as they will be immediately rejected.

Some areas that members of the Editorial Board have identified as important and presently under represented in the pages of the Journal include the complex fields of epigenetics and the construction of evolutionary models and the elucidation of evolutionary relationships. Methodological approaches of interest include software comparison and benchmarking, data cleaning and curation, accuracy of predicted and extracted information, ontologies and text-mining, solutions that allow for the large-scale analysis of biological data in reasonable time (high performance computing solutions and cloud systems), standards, training and change management activities, and the determination of causal relationships from data. There was specific mention of the use of ontologies for semantic-based analysis of molecular data and interaction networks, methods and tools for the automatic or semiautomatic annotation of biological data with terms extracted from ontologies, and methods and tools for enrichment analysis. Articles focusing on illuminating the bottlenecks problems in important bioinformatics approaches will be especially helpful to readers. It must be emphasised that these comments are suggestions and are not intended to be prescriptive. As science advances the details of what is important changes and the Editors, Editorial Board and Reviewers will be flexible in their policies.

Types of Submission

Submissions of the following types are accepted for review in the Journal:

- Review articles (2000–7000 words)
- Opinion articles: topical or controversial areas that do not warrant a full review (500–1000 words)
- Letters to the Editors (relating to a topic previously published in the Journal) (300–1000 words)
- Software and website reviews (by authors other than the originators) (500–1000 words)
- Book reviews (500–3000 words)
