Introducing MENTOR® MemoryGel® Xtra Breast Implants

OWN The Day

The soft, natural feel your patients desire* with increased projection, fullness and firmness.†

*As compared with saline-filled breast implants
†When compared to MemoryGel® Breast Implants.

IMPORTANT SAFETY INFORMATION
MENTOR® MemoryGel® Breast Implants are indicated for breast augmentation in women at least 22 years old or for breast reconstruction. Breast implant surgery should not be performed in women with active infection anywhere in their body or who are at risk of infection, or in those who have prior History of breast cancer or are pregnant or nursing.

Breast implants are not lifetime devices and breast implantation is not necessarily a one-time surgery. The most common complications with the MemoryGel® Breast Implants include reoperation, capsule contracture, asymmetry and breast pain. A lower risk of complication is rupture. The health consequences of a ruptured silicone gel-filled breast implant have not been fully established. MRI screenings are recommended three years after initial implant surgery and then every two years after to detect silent rupture.

Patients should receive a copy of important information about MENTOR® MemoryGel® Silicone Gel-Filled Breast Implants. Your patient needs to read and understand the information regarding the risks and benefits of breast implants, with an opportunity to consult with you, prior to making an informed decision about breast augmentation. Please refer to the Product Insert Data Sheet provided with each product, or online at www.mentorwwllc.com.
