Abstract submission for the poster and concurrent contributed sessions opens November 10, 2017. Submissions are due by January 16, 2018.

Please use the following guidance to prepare your abstract for online submission.

1. Go to https://epiresearch.org/annual-meeting/2018-meeting/abstract-submission/.
Enter your text in the space provided. All abstracts must be submitted online.

2. Do not include references, figures, tables, or mathematical equations in the abstract. Avoid acronyms and, where necessary, spell them out when used for the first time (ORs, RRs and CIs do not need to be spelled out). Select one topic area from the list below, if applicable, that will be used to organize concurrent contributed sessions. The abstract should not exceed 2,000 characters, including spaces. Author information is in addition to the 2,000 characters.

3. Presentation of specific data and methodologic details assist reviewers in judging the quality of the research. New findings are weighed more favorably than affirmation of known relations. Clarity and brevity of writing will allow evaluation of the importance of the research. Each abstract is scored by a minimum of two reviewers. An overall acceptance proportion is applied to each subject area. The allocation of papers therefore represents the number of abstracts submitted for the subject areas.

4. The submitting author will be notified by email on or before April 1, 2018 with a final decision. If you do not receive a notification, please contact Ms. Courtney Long (clong@epiresearch.org) after this date.

Select a General Topic Area (primary selection used for abstract review):

- Aging
- Alternative medicine
- Behavior
- Big Data
- Cancer
- Cardiovascular
- Diabetes
- Environment/Climate Change
- Genetics
- Global Health
- Health Disparities
- Health Services/Policy
- HIV/STI
- Infectious disease
- Injuries/Violence
- Men’s health
- Mental health
- Methods/Statistics
- Molecular
- Neurology
- Nutrition/Obesity
- Occupational
- Perinatal & Pediatric
- Pharmacoepidemiology
- Reproductive
- Respiratory
- Screening
- Social
- Substance Use
- Translational & Implementation Science
- Women’s health
- Environmental Epidemiology
- Epidemiology in History
- Original Contributions
- Hearing Loss
- Impact of Blast Injury on Hearing in a Screened Male Military Population.
  Antony R. Joseph, Jaime L. Shaw, Mary C. Clouser, Andrew J. MacGregor, and Michael R. Galarneau

From Zimbabwe. Jan-Walter De Neve and S. V. Subramanian

The Department of Epidemiology, Graduate School of Public Health, University of Pittsburgh invites applications for a full-time faculty position at the level of Assistant Professor. This position is available immediately and requires a doctoral degree in the epidemiology of aging and training and experience in the epidemiologic study of aging in large cohorts. The successful candidate will be responsible for developing research relevant to study the epidemiology of muscle aging and disability. The individual will submit independent research grants, publish manuscripts and participate in epidemiologic studies of aging. Responsibilities may include staff training and supervision, and data collection, management, and analysis. The successful candidate will also contribute to teaching within the epidemiology of aging program. The position is outside of the tenure stream and is funded by grants from the National Institutes of Health. Salary will be commensurate with experience. Applications will be reviewed until position is filled. Send letter of intent, curriculum vitae, and the names of three references to:

### SER ANNUAL WORKSHOP ON METHODS
FOR EPIDEMIOLOGY DOCTORAL STUDENTS

**Deadline:** February 2, 2018

Since 1977, SER has sponsored an annual student workshop on epidemiologic methods related to their dissertation research. SER seeks applications from doctoral students to participate in the workshop to be held in Baltimore, Maryland immediately preceding the 2018 Society for Epidemiologic Research Annual Meeting (June 19–22, 2018). Dr. Enrique Schisterman, SER President-Elect, will be the workshop coordinator. Faculty members with expertise in epidemiology, biostatistics, and other substantive areas, will conduct the workshop.

The workshop meets the evening of June 18th and all day June 19th. The thesis must be in progress but not completed so that the workshop may affect how the project is actually conducted. The application will require a summary of the dissertation topic, hypothesis, study design(s), and proposed methods. All epidemiological areas are welcome including methods, cardiovascular disease, women’s health, cancer, infectious diseases, health disparities, to name a few. Attention will also be paid to community engagement and implementation science during the workshop.

The students selected for participation will receive a fellowship to support travel expenses for the meeting and onsite childcare services will be available at no charge. Students from under-represented racial and ethnic groups are particularly encouraged to apply. Only doctoral students in epidemiology, or related doctoral programs whose thesis involves an epidemiologic study, are eligible.

For further instructions or to apply, please visit [http://epiresearch.org/annual-meeting/student-dissertation-workshop/](http://epiresearch.org/annual-meeting/student-dissertation-workshop/).

Applications must be submitted by the end of Friday, February 2, 2018.
INSTRUCTIONS TO AUTHORS
Below is an abbreviated version of our instructions to authors. For the full version, please visit https://academic.oup.com/aje/pages/Instructions_To_Authors.

CORRESPONDENCE AND MANUSCRIPT SUBMISSION

Manuscripts must be blinded, double-spaced, and in 12-point type, with pages numbered. Each manuscript, when submitted, must include a word count for both the abstract and the text, exclusive of references, tables, and figure legends. Files should be submitted at http://mc.manuscriptcentral.com/aje. Please note that a lack of proper formatting, spelling, and reference citations will slow down a paper’s review and its ultimate disposition.

Authorship credit should be based on criteria developed by the International Committee for Medical Journal Editors (ICMJE). The author who submits the manuscript will remain the contact author throughout the entire publishing process. At the time of submission, the corresponding author must confirm that all authors meet the authorship criteria and have seen and approved of the paper. When the final revision of the manuscript has been accepted, the senior author must sign a Publication Agreement and a statement accepting responsibility for publication fees.

WORD COUNT

The maximum number of words per article, exclusive of tables, figures, references, and abstract, should be as follows: Original Contribution, 3,500; Practice of Epidemiology, 4,000; Study Design, 4,000; Review or Commentary, 4,000; HuGE Review, 5,000; Mini-Review, 2,000 (with no more than 1 figure, 1 short table, and 30 references); Special Article, 4,000; Systematic Reviews and Meta- and Pooled Analyses, 4,000; Epidemiology in History, 4,000; Invited Commentary, 2,000; Brief Original Contributions, 2,000 (with no more than 2 half-page tables and 40 references); Letter to the Editor, 500–600; and Research Letter, 1,000 (with no more than 1 figure and 1 short table). An abstract should not exceed 200 words. Authors must provide a word count for both the abstract and the text. Editors can request that authors shorten their papers further. Lengthy, encyclopedic tables should be avoided.

TEXT FORMAT AND STYLE

Refer to a current issue of the Journal for the correct format and style. It should be used in conjunction with the AMA Manual of Style, 10th Edition, published by Oxford University Press. Use American English spelling.

TABLE FORMAT AND STYLE

Each table must be formatted by using the table feature in Word. Tables should be numbered (Arabic numerals) in the same consecutive sequence in which they are mentioned in the text. Avoid using internal headings and do not use rules within the table body. Column headings should be clearly delineated, with straddle rules over pertinent columns to indicate subcategories. Columns should contain like types of data. Divide overly long tables into 2 or more tables. Multipart tables are not acceptable.

FIGURE FORMAT AND STYLE

Letters, numbers, decimal points, and symbols should be large enough and sharp enough to be readable when figures are reduced and scanned (no smaller than 8 pt in print). All multi-panel figures should have locants to identify each panel. When plotting relative measures of effect (e.g., relative risks, relative odds), a logarithmic scale must be used unless there is a compelling reason to use an arithmetic scale. If bars are used to plot the relative measures, they should start at the baseline level of 1.0.

Figure legends should not be included on the figures themselves but should be typed after the reference list. Authors should submit their figures with the manuscript. Color figure charges are £350 / $600 / €525 per figure. Figures with multiple shades of gray are not recommended. For clarity, use dots, hatch marks, or other line art markings. If your figures were created in Word, Excel, or PowerPoint, please submit in that format. For all other programs, please save these figures directly to EPS, PDF, or TIFF files and submit in that format. Vector files are preferred.

REFERENCES

All statements of scientific fact should be referenced. Number references consecutively in the order in which they are mentioned in the text. Reference numbers in the text are full-sized Arabic numerals in parentheses within the sentence. Lists of 3 or more consecutive references cited together should be listed as a range. Format other references as (4, 5, 12), with spaces between the reference numbers. See the online instructions for examples of specific types of references.

WEB MATERIAL

Web materials comprise supporting materials that cannot be included in the printed version of the article because of space constraints and that are not necessary in the full text of the manuscript but would nevertheless benefit the reader. They should not be essential to understanding the conclusions of the paper but should contain data that are directly relevant to the article content. Excessively long Web materials (>50 pages) or those that contain information not directly relevant to the paper will not be accepted. Examples include more detailed methods, extended data sets/data analysis, tables, questionnaires, or additional figures. These should be named Web Appendix, Web Tables, or Web Figures.
