Latest Clinical Practice Guideline Recommends Continuous Glucose Monitors (CGMs)

Read “Diabetes Technology—Continuous Subcutaneous Insulin Infusion Therapy and Continuous Glucose Monitoring in Adults.”

State-of-the-art guidelines based on expert recommendations:

- Maintain better control of blood sugar and experience fewer episodes of hypoglycemia with CGMs
- Use of insulin pumps over daily injections in individuals with Type 1 diabetes who have not met their A1C goals
- Thorough device usage education and training for patients and healthcare providers
- Call for Medicare coverage to extend CGM technology to older adults with Type 1 diabetes

Peer-reviewed and developed by a team of experts, the Society’s Clinical Practice Guidelines provide the highest quality, actionable recommendations for physicians in a clinical setting.

MISSION STATEMENT OF THE ENDOCRINE SOCIETY
The mission of the Endocrine Society is to advance excellence in endocrinology and promote its essential and integrative role in scientific discovery, medical practice, and human health.

APRIL 2016-MARCH 2017

OFFICERS:
Henry M. Kronenberg, President
Lynnette K. Nieman, President-Elect
Lisa H. Fish, Immediate Past-President
Howard B. A. Baum, Vice-President — Physician-in-Practice
Carol A. Lange, Vice-President — Basic Scientist
Anthony L. McCall, Vice-President — Clinical Scientist
Richard S. Legro, Secretary-Treasurer

COUNCIL
Bradley Anawalt
Denis Baskin
Beverly M. K. Biller
Alan Daikin
Genevieve Neal-Perry
Michael Tuttle
Guillermo E. Umpierrez
Carol Wysham

Kathryn A. Martin, Ex-Officio (Nominating Committee Chair)
Lauren M. Fishbein, Ex-Officio (Trainee & Career Development Core Committee Co-Chair)
Barbara Byrd Keenan, Ex-Officio (Executive Director and CEO)

ARE YOU PRACTICING ENDOCRINOLOGY WITH THE LATEST INFORMATION?

WHEN YOU NEED THE BEST, ESAP™ DELIVERS
- 120 new endocrine cases
- Online module plus hard copy reference
- Eligible for up to 40 AMA PRA Category 1 Credits™ and 40 ABIM MOC points

MASTER THE BOARDS WITH THE MOST COMPREHENSIVE STUDY GUIDE
- Access live sessions plus printed book
- Includes 239 multiple choice questions
- ABIM style questions and progress reports to test performance

ENDO COMES TO YOU IN THIS VIBRANT, SELF-PACED LEARNING EXPERIENCE
- Receive instant access to over 230 sessions and 130 hours of content
- Never leave the comfort of your home or office
- Share content with your staff and colleagues

ORDER ONLINE TODAY AT ENDOCRINE.ORG/STORE
SET UP AN ENDOCAREERS.ORG ACCOUNT AND DISCOVER GREAT BENEFITS:

- Access to the best jobs
- Personalized job alerts
- Career management tools
- Confidential resume postings
- Tips for personal and professional growth

To find the right endocrinologist for your job opening you only need to look one place, EndoCareers®. Through the EndoCareers® job board, print advertising opportunities in the Endocrine Society's premier scientific journals and Endocrine News, and multiple options for comprehensive recruitment campaigns, you can trust your message will reach your target audience with EndoCareers®.

endocareers.org

To speak with a representative for print advertising opportunities, contact Dan Simone at dsimone@pminy.com or 212.904.0360. For questions about our job board, please contact the Endocrine Society at endocareers@endocrine.org or 202.971.3636.
Before submitting a review, prospective authors should submit a proposal to the Editor-in-Chief. See Guidelines for Submission of Proposals, p. 7A.

**TITLE PAGE**
- Full title of 120 characters or fewer that provides a concise statement of the article’s major contents
- Authors’ full names and institutions.
- Short title of 50 or fewer characters for page headings
- No more than six keywords
- Corresponding author’s contact information
- Name and address of person to whom reprint requests should be addressed
- Any grants or fellowships supporting the writing of the paper
- Disclosure summary

**ABSTRACT**
- No longer than 250 words
- Does not refer directly to the text or references
- Describes in complete sentences the purpose, methods, results, and main conclusions
- Aimed to a general audience with specialized terminology kept to a minimum.

**PRÉCIS**
- No longer than 200 characters
- Write the précis to buttress the title by simply stating what was done and what was found.

**INTRODUCTION**
- An introductory statement that places the work in historical perspective, explaining its intent and significance.

**BODY OF PAPER**
The organization of this privileged section of the review is left to the authors. However, the organization should be logical and readily comprehended by the reader. As indicated above, an outline that indicates this organization is desirable. Authors should include a brief section describing the search strategies used to obtain information for the review.

**ACKNOWLEDGMENTS**
- Include names of people who contributed to the study but did not meet the requirements for authorship.

**REFERENCES**
- Use the AMA (American Medical Association) Style Guide for references. List all authors for the initial submission.
- List references in numerical order (in parentheses) in the text and list in the same numerical order at the end of the manuscript.
- Do not cite the following in the reference list:
  - Unpublished observations
  - Personal communications
  - Submitted manuscripts
  - Manuscripts in preparation
- “In press” manuscripts can be included in the reference list if they meet the following criteria:
  - Accepted for publication but not yet in final published form
  - Can be cited with a DOI (Digital Object Identifier)
  - The journal name is provided
- Abstracts: If it is necessary to cite an abstract because it contains data not published elsewhere, it must be designated as such in the text and in the reference list.
- Examples of references:

**LEGENDS FOR FIGURES AND TABLES**
- Provide all legends separately after the references.
- Clearly and completely describe the content of the figure or table so it can be understood without reference to the text.
- Explain any symbols or the significance of any color that is important for understanding the content
- Use color descriptors as necessary

**TABLES**
- Construct tables as simply and design them to be clear without reference to the text.
- Provide a concise heading and footnotes if needed.
Color charges will apply to all submitted color figures and cannot be replaced with black and white versions after acceptance.

Specifications

- **Lettering:**
  - Figures should be scaled to either one column (19.5 picas) or two columns (35 picas) with 8-point type.
  - Lines should be a minimum of 0.5–1 point when the figure is correctly sized to its corresponding column width.
  - Avoid the use of reverse type (white lettering on a darker background).
  - Avoid lettering on top of shaded or textured areas.
  - Default figure part labels position should be within or centered beneath their respective panels and should have consistent styling: “(a),” “(b),” and so on; “(A),” “(B),” and so on.

- **Resolution:**
  - Low-resolution figures are not acceptable for production.
  - Line art (monochrome): 600–1200 DPI
  - Halftone (grayscale only): 300 DPI
  - Combination (halftone with type or lines) or color: 600 DPI

- **File Format:**
  - Submit one file per figure.
  - Preferred format is EPS, TIF, PPT, and Word (JPE and BMP, although not preferred, will be considered on a case-by-case basis).
  - Fonts should be embedded in the file.

- **File Name:**
  - Use the following naming convention for original submission: Author Last Name, figure number, and file format extension (e.g., Smith_fig1.eps).
  - Use the following naming convention for revised figures: Author Last Name, manuscript number, figure number, and file format extension (e.g., Smith_er.2016-1234_fig1.eps)

- **Color Mode:**
  - Preferred color mode is RGB.
  - Color density should be no more than 300%.
  - All color art reproduction in print will result in author charges
  - Color figures are not converted to black and white after production.

- **Shading:**
  - Make differing shades vary by at least 20%, i.e., 25%, 45%, 65%.

- **Graphs:**
  - Graphs with axis measures containing very large or small numbers should convert to easily readable notations. Example: For an ordinate range of “counts per minute” values from 1,000 to 20,000, the true value may be multiplied by 10–3 (scale would read from 1 to 20) and the ordinate axis display “cpm (×10−3).” Similarly, for a Scatchard plot with values ranging from 0.1 to 2 femtomolar (10–15 M), the scale may run from 0.1 to 2 with the abscissa labeled “M(×1015).”
  - Three-dimensional bar graphs will not be published if the information they refer to is only two-dimensional.
KEEP YOUR PRACTICE CURRENT WITH CONTENT FROM CLINICAL ENDOCRINOLOGY UPDATE 2016, INCLUDING:

The very latest in Diabetes and Obesity, plus updates on Cushing's Disease, Hypopituitarism, Acromegaly, Pituitary Surgery, Hirsutism, Transgender, and much more.

AND THE BEST PART?

You get to experience the Clinical Endocrinology Update meeting without ever leaving your home or office.

© 2017 ENDOCRINE SOCIETY
ARTICLE TYPES

The following types of articles will be considered for publication in Endocrine Reviews:

ORIGINAL ARTICLES

Review Articles may range from 6,000 to 25,000 words in length, depending on the breadth of the focal topic, and cite from 25 to 400 references. They should not contain previously unpublished observations.

Each manuscript should present a timely, authoritative review. Longer reviews may be in all areas of experimental and clinical endocrinology. Authors should provide sufficient background information to allow both endocrinologists and other scientists to gain both knowledge and perspective of the subject. The editors emphasize their interest in publication of articles that present a critical review of previous findings, as opposed to a simple compilation of previously published data and interpretations, and simple meta-analyses are discouraged. Shorter reviews may reflect integration of the latest discoveries in basic research or of clinical advances into the knowledge extant in any area of endocrinology. Such reviews could represent updates of previously published longer reviews and should also be critically analytical of the significance of the new information described.

Questions concerning variations from the format should be addressed to the Editor-in-Chief.

OPINION AND COMMENT

Letters to the Editor should normally be no more than 500 words in length and discuss material previously published in Endocrine Reviews. They must not cite unpublished work or data.

GUIDELINES FOR SUBMISSION OF PROPOSALS

Proposals for manuscripts may be solicited by the Editor-in-Chief, or may be submitted independently by interested individuals. When submitting a proposal, authors must include the following items:

1. A full outline of the proposed review, listing all topics to be covered e.g.,
   I. [Heading][subheading][subheading][subheading]
   II. [Heading][subheading][subheading][subheading]

2. A brief (1 page) narrative of the material to be covered in the manuscript, including a statement on why the topic is important and timely.

3. A curriculum vitae for each author of up to six pages, including a bibliography of relevant, recent publications. Please do not list talks or include biosketches or abstracts.

4. A completion date for the manuscript.

These items should be uploaded to Editorial Manager as a Pre-Submission Inquiry; please be sure all items are in the order listed above. Once a proposal has been reviewed by the editors, the author will be notified of its status.

ARTICLE PROCESSING CHARGES AND OPEN CHOICE

Color charges

- Invited manuscripts: Waived provided the use of color is approved by the Editor-in-Chief
- Uninvited manuscript, Endocrine Society member: $235 per color figure
- Uninvited manuscript, non-member: $735 per color figure

Open Choice: Covers CC-BY License (as seen on the Creative Commons site at https://creativecommons.org/licenses/by/4.0/) and PubMed Central Deposit

- Endocrine Society members and non-members: $3000

Correction Charges

A charge of $250 to cover production costs will be applied when changes due to author oversight are made to published articles. All changes must be requested through the Editorial Office and approved by the Editor-in-Chief.

POST-PUBLICATION ACCESS POLICIES AND OPEN CHOICE

Articles funded by the National Institutes of Health (NIH) or other US agencies will be submitted to PubMed Central after final publication and will be made freely available in 12 months. NIH will contact the author to confirm submission.

In accordance with Wellcome Trust and Research Councils UK policies, the Endocrine Society will deposit to PubMed Central final published versions of articles produced with funding from those organizations or from funding organizations operating under Wellcome Trust/Research Councils UK policies upon receipt of a special publication fee of $3000 per article, in addition to other publication charges. Publication fees are an authorized grant expense for which authors can seek reimbursement from the Wellcome Trust, Research Councils UK, or funders operating under their policies. These articles will contain the following language: “This article has been published under the terms of the Creative Commons Attribution License (CC-BY; https://creativecommons.org/licenses/by/4.0/), which permits unrestricted use, distribution, and reproduction in any medium, provided the original author and source are credited. Copyright for this article is retained by the author(s).”

If your manuscript is accepted for publication, you will be asked at the proof stage to confirm the funding source of your paper and to agree to pay any applicable post-publication access fees.

MANUSCRIPT PREPARATION GUIDELINES AND CHECKLIST

Below is a checklist of the basic format requirements. For more information see https://academic.oup.com/edrv/pages/Author_Guidelines#editorial. If you have any questions, contact the editorial staff at publications@endocrine.org.
All submissions must include:

- A cover letter stating the authors’ wish that the manuscript be evaluated for publication in the journal. This letter must list the title and all authors of the paper. Elsewhere on the submission form authors can include up to five suggested reviewers and three reviewers to exclude. A valid reason for exclusion should be included.

- **Essential points:** These provide the main takeaway messages from the article. There should be between three and seven bulleted points. Each point should consist of a single sentence, although there is no character limit imposed on the sentence.

**GUIDELINES ON GENERAL PREPARATION**

- For initial submissions ONLY, a single PDF incorporating all the manuscript elements may be uploaded to the Editorial Manager site to speed the submission process. Any subsequent revisions must attach text, figures, and tables as separate files.
- Submit paper in English through the Editorial Manager system at www.editorialmanager.com/edrv/.
- Use a double-spaced, single-column format with 1-inch margins.
- Number all text lines throughout the manuscript.
- Paginate the entire document.
- Place all tables and figures after the references and clearly label each.
- Gather needed information prior to starting the submission process in Editorial Manager:
  - Full names, institutions, and email addresses for each author
  - Appropriate funding information for each author
  - Disclosure information for each author
  - Names and email addresses for three recommended reviewers
  - Original manuscript number if manuscript being submitted was previously rejected by the journal to which it is being resubmitted
- At revision, submit the text in Word and figures in TIF or EPS.
- To download an MS Excel spreadsheet of standard abbreviations, go to http://www.endocrine.org/~/media/endsociety/files/publications/journals/ListofStandardAbbreviationscombined20150519.xlsx

**INSTITUTIONAL REPOSITORIES**

- Authors can submit the peer reviewed accepted, uncopyedited version of their manuscript, as well as any previous versions as required, to institutional repositories
- The Advance Article PDF can be submitted to an institutional repository
- The final typeset version should not be submitted but can be accessed through linking

**CONFLICT OF INTEREST DISCLOSURE**

The Endocrine Society and its journals are committed to ensuring the integrity of all their activities. The Disclosure Policy for journal contributors requires that each author disclose all relevant financial and other interests that might be construed as resulting in an actual, potential, or apparent conflict in the author’s role as a contributor to the journal, regardless of amount or value.

Nothing in the disclosure statement shall be regarded as creating a presumption of impropriety in the existence of financial interests or other relationships. The purpose is to inform peer reviewers and readers of the existence of financial relationships pertinent to the article in the interest of the full transparency of the peer review and publication processes.

If the paper is accepted for publication in the journal to which it is submitted, all disclosures will appear in all versions of the article.

To read the full Endocrine Society Disclosure policy, see https://www.endocrine.org/~/media/endsociety/Files/AboutUs/CorporateInfo/coi_guideline.pdf.

**Instructions for Author Disclosure Summary for Title Page**

- Briefly collate all information regarding conflicts directly related to the material being published from the individual author summaries.
- Use the format: Author’s initials, then category, then company name.
- Relevant categories include “has nothing to declare,” “is employed by,” “was previously employed by,” “consults for,” “has previously consulted for,” “has served as an expert witness for,” “received lecture fees from,” “has equity interests in,” “received grant support (dates) from,” “is an inventor on (country)(patent number),” “receives royalties from.” Authors may also add other pertinent categories.

**EXAMPLES:**

- DISCLOSURE STATEMENT: AZ, BY, and CX have nothing to declare. DW was previously employed by Hormone Pharma and has equity interests in Secretry Devices, Inc... EV is a consultant for Endo Experts, LLC. FW received lecture fees from Gland Enterprises. GT is an inventor on U.S. Patent 000-111-2222.
- DISCLOSURE STATEMENT: The authors have nothing to disclose.
Patients rarely present with endocrine diseases in isolation. This is especially true in the emergency setting when acute and chronic diseases can perturb the endocrine system, having important implications for testing, diagnosis, and treatment. Manage complex endocrine emergencies with this comprehensive and timely clinician’s guide.
