Malignant Esophageal Disease

Role of definitive chemoradiotherapy using docetaxel and S-furamuracil in patients with unresectable locally advanced esophageal squamous cell carcinoma: a phase II study

A. Pauwels, J. Tack

Effort of baclofen on gastric acid pocket in subjects with gastroesophageal reflux disease symptoms

Effort of baclofen on gastric acid pocket in subjects with gastroesophageal reflux disease symptoms

A. Syed, C. Maradey-Romero, R. Fass

The relationship between eosinophilic esophagitis and esophageal cancer

E. S. Dellon

Reduced toxicity with three-dimensional conformal radiotherapy or intensity-modulated radiotherapy compared with conventional two-dimensional radiotherapy for esophageal squamous cell carcinoma: a secondary analysis of data from four prospective clinical trials

J.Y. Deng, C. Wang, B. Sh. Shi, G. L. Jiang, Y. Wang

Neoadjuvant versus adjuvant chemoradiation for stage III–III esophageal squamous cell carcinoma: a single institution experience

Y. Chen, D. Hsu, X. Wu, W. Xing, Y. Yang, C. He, W. Wang

Neoadjuvant chemoradiotherapy with concurrent cisplatin/5-fluorouracil is associated with increased pathologic complete response and improved survival compared to carboplatin/paclitaxel in patients with locally advanced esophageal cancer

A retrospective comparison of neoadjuvant chemoradiotherapy regimens for locally advanced esophageal cancer

Dose-escalated neoadjuvant chemoradiotherapy with dose-gating intensity-modulated radiation therapy and improved pathologic complete response in locally advanced esophageal cancer

Sunifant modulates the radiosensitivity of esophageal squamous cell carcinoma cells in vitro

Low-dose hyperthermia enhances the antitumor effects of chemotherapy in squamous cell carcinoma
