The Journal of Gerontology: BIOLOGICAL SCIENCES

The Journal of Gerontology: Biological Sciences publishes articles on the biological aspects of aging in areas such as translational gerontology, bio-markers of aging, biochemistry, biomedicine, comparative and evolutionary biology, endocrinology, exercise science, genetics, immunology, neuroscience, nutrition, pathology, pharmacology, physiology, and the biological mechanisms of late life diseases. Biological insights gleaned in studies from invertebrates, vertebrates, and mammalian species including humans will be considered. The journal is particularly interested in publishing research on translational gerontology including interventions designed to enhance longevity and healthspan.

The Journal of Gerontology: MEDICAL SCIENCES

The Journal of Gerontology: Medical Sciences publishes articles on health-related aspects of human aging. Topics of interest may range from biomarkers of aging, multisystem physiology of aging, multimorbidity, age-related disability including the physical, psychological and social aspects of function, novel aging populations such as ethnic and racial minorities or the oldest old, global health and aging, healthy aging and health span. Appropriate designs include observational studies, clinical trials, basic biology or physiology in human subjects, and health services research. All health-related disciplines are welcome. The journal is especially interested in translational research that addresses the functional consequences of aging biology and/or age-related disease, and novel interventions designed to slow and prevent functional decline and improve health outcomes.
