Automated Peritoneal Dialysis (APD) is the fastest growing dialysis modality in the world today. APD emerges as a better option for certain groups of patients and is therefore a valuable alternative to other treatment options.

**APD provides:**
- more dialysis to those unable to meet their treatment targets on CAPD
- enhanced UF control for patients with high permeability
- overnight dialysis at home
- added freedom during the day
- extra convenience and enhanced quality of life
- reduced peritonitis incidence

**APD with HOMECHOICE™ system, a new way to go home:**
- Revolutionary solution control system
- Compact, portable home therapy
- Effective management of dialysis time
- Easy to use and quick to learn
- More ESRD patients able to benefit from APD therapy
- Improved quality of life – daytime freedom

*The disposable cassette is at the heart of the HomeChoice™ system technology. The simulation of gravity replaces the need for threading lines on pumps and eliminates the need to hang heavy bags at inconvenient heights.*

THE HOSPAL VISION OF THE FUTURE IN DIALYSIS MONITORING which offers:

• All treatment options currently available while keeping totally open to those to come.

• A built-in blood volume monitoring feature, first step of the Hospal Biofeedback System.

• A comprehensive and interactive communication capability.
Official Journal of the American Society of Nephrology

EDITOR:
Jared J. Grantham, MD

This multidisciplinary journal offers excellent peer-reviewed articles covering all aspects of the broad field of nephrology. It encourages dynamic interaction between basic and clinical sciences and facilitates rapid communication between nephrologists and other specialties.

Key Features:
✓ Original Peer-reviewed articles
✓ Reviews of basic and clinical topics by distinguished contributors
✓ Comprehensive studies addressing research questions
✓ Scientific commentary and letters to the editor
✓ Concise reports presenting new observations
✓ 600 pages of Annual Meeting abstracts

• Monthly • Volume 5 (1995)
• 1,500 Pages Per Year • ISSN: 1046-6673

Subscription Rate:
Personal £117, Institution £153, In-Training £63

THE EFFICACY of a hollow-fiber and the SAFETY of a plate.

THE EFFICACY:

THE MYTH:
HOLLOW FIBER DIALYZERS ARE MORE EFFICIENT THAN PLATE DIALYZERS.

THE FACT:
CRYSTAL™ CLEARANCES EQUAL THOSE OF FIBERS.

THE SAFETY:

- Blood is not in contact with potting material - avoiding any risk of leaching.
- Compliant plate structure prevents backfiltration.
- Gamma sterilization is available for CRYSTAL™.

* Clearance measured according to ISO 8637 standard with Qo = 500 ml/min and Quf = 10 ml/min.
ADVANCED RENAL MEDICINE
Edited by A. E. G. Raine

ESSENTIAL READING FOR SPECIALIST NEPHROLOGISTS, GENERAL PHYSICIANS AND RESEARCHERS
UNIQUELY AUTHORITATIVE
BROAD AND UP-TO-DATE OVERVIEW OF CURRENT ISSUES
WRITTEN BY LEADING AUTHORITIES IN THE FIELD

The past ten years have witnessed significant progress in both the scientific basis and clinical practice of renal medicine. Despite such progress, many important questions remain unanswered. This volume analyses several of the most exciting developments and highlights the areas in which research and the advancement of knowledge continue. Written by a team of contributors who are acknowledged experts in their area, this volume provides a comprehensive and up-to-date overview of modern nephrology.

Any practising nephrologist or researcher wishing to stay abreast of current developments will need a copy of this book.

504 pages, 20 halftones, 60 line drawings, December 1992

A MAJOR NEW SERIES FOR CLINICAL NEPHROLOGISTS

Oxford Monographs on Clinical Nephrology

Prevention of Progressive Chronic Renal Failure
Edited by A. Meguid El Nahas, Netar P. Mallick, and Sharon Anderson

Written by a selection of international experts, this book provides in-depth coverage of one of the most exciting and rapidly evolving areas of nephrology. It covers both the latest advances in experimental nephrology and the clinical aspects of progressive kidney disease. It describes the progress made over the last decade in understanding the pathogenesis of progressive kidney scarring and explores a range of therapeutic interventions, both dietary and pharmacological, reviewing their impact upon various experimental models of chronic renal failure. Clinical aspects are also considered, and current knowledge of the natural history of diabetic and non-diabetic kidney disease is comprehensively reviewed. Finally, options for the prevention of progressive renal failure in humans are assessed - emphasizing the huge difference between the efficacy of experimental and clinical interventions.

Analgesic and NSAID-induced Kidney Disease
Edited by J. H. Stewart

Analgesic nephropathy, first recognized in 1950, was for two decades the most common cause of both acute and chronic renal failure in some parts of the world. This comprehensive text follows the story of the disease from its early description to its ultimately successful prevention. The aetiology, pathology, diagnosis, and treatment are described by those who have played leading roles in elucidating the nature of the disease, and in persuading society to take effective measures to prevent its occurrence.

The second section describes those renal disorders resulting from the use of newer non-steroidal anti-inflammatory drugs and paracetamol - disorders which are rising in frequency and may prove more difficult to prevent. Finally, the book considers the urothelia cancers caused by phanacetin-containing headache powders, a late outcome of analgesic abuse.

With contributions from a distinguished international group of authors, this is a unique book on a challenging problem. Throughout the text, theory and practice are integrated, and attention is drawn to the valuable lessons gained from the study of the analgesic nephropathies.
