MISSION STATEMENT OF THE ENDOCRINE SOCIETY
We unite, lead, and grow the endocrine community to accelerate scientific breakthroughs and improve health worldwide.

APRIL 2018–MARCH 2019

OFFICERS
Susan J. Mandel, President
E. Dale Abel, President-Elect
Lynnette K. Nieman, Immediate Past President
Howard B. A. Baum, Vice President — Physician-in-Practice
Genevieve S. Neal-Perry, Vice President — Basic Scientist
Stephen M. Rosenthal, Vice President — Clinical Scientist
Richard S. Legro, Secretary/Treasurer
Dolores M. Shoback, Secretary/Treasurer-Elect

COUNCIL
Henry Anhalt
Daniel J. Bernard
Cesar L. Boguszewski
Ann Danoff
Anthony N. Hollenberg
Clifford J. Rosen
Jenny A. Visser
Carol H. Wysham
Laurence Katznelson, Ex Officio (Nominating Committee Chair)
Lori T. Raetzman, Ex Officio (Trainee & Career Development Core Committee Chair)
Barbara Byrd Keenan, Ex Officio (CEO)

PUBLICATIONS CORE COMMITTEE
Daniel I. Spratt, Chair

Comprehensive Author Guidelines are available at https://academic.oup.com/jcem/pages/Author_Guidelines

The following types of articles are considered for publication in this journal:

ORIGINAL ARTICLES

- **Clinical Research Articles** are original, investigative studies based on previously unpublished data. There are no upper or lower word/figure/table limits. All figures and tables must be original.
- **Case Reports** are descriptions of a case that provides insights into a condition’s pathogenesis, presentation, or management. Manuscripts will typically have 1,200 words or fewer, with no more than two figures, two tables, and ten references. All figures and tables must be original.

REVIEW ARTICLES

- **Mini-reviews** should address topics of importance to clinical endocrinologists and endocrine clinical investigators, including scholarly updates regarding the molecular and biochemical basis for normal physiology and disease states; the state-of-the-art in diagnosis and management of endocrine and metabolic disorders; and other topics relevant to the practice of clinical endocrinology. Unless the mini-review is formally invited by the editors or Endocrine Society staff, authors should include a prospectus with a brief narrative of the mini-review’s purpose and scope, an outline describing its contents, and the CVs of all authors involved. These manuscripts can range from 2,000 words to a maximum of 5,000 words. Authors should include a brief section describing the search strategies used to obtain information for the mini-review. If the authors choose to use previously published figures or tables, they must follow the guidelines under the Publication Fees section.
- **Meta-analyses** should focus on specific efficacies of diagnostic procedures or treatments. The submitted manuscript must be derived from an in-depth statistical analysis of information discovered by an exhaustive search of already published and relevant peer-reviewed manuscripts. Submissions of this type must include an outline and a narrative statement. There are no limits on word count, number of figures, or number of references. All figures and tables must be original.

OPINION AND COMMENT

- **Editorials** are opinion articles by the journal’s Editor-in-Chief or an Associate Editor and will typically address some policy matter of importance to endocrinologists. Editorials carry no figures or tables and have no more than eight references.
- **Commentaries** are opinion articles invited by the Editor-in-Chief that will examine concepts and findings recently introduced into the scientific record that have exceptional interest. They are typically up to 1,000 words in length, should have no more than eight references, and have no figures or tables. Commentaries should not cite unpublished work or data.
- **Perspectives** present a new viewpoint on policies and generally accepted principles and practices in endocrinology that warrant closer examination based on very recent newly published data. They should cite relevant literature and are typically no longer than 2,400 words and have no more than 25 references. Perspectives should not cite unpublished work or data, and any figures should present only overall generalizations, not new data. Figures must be original. Perspectives are submitted by invitation from the Editor-in-Chief.
- **Reports and Recommendations** present a summary of the proceedings and conclusions of non-Endocrine Society work groups, task forces, and other collaboratives. They will be subject to peer review and must be modifiable in response to criticisms. They are typically no more than 3,600 words in length. All figures and tables must be original.
- **Letters to the Editor** should be no more than 500 words in length, have no more than eight references, and discuss material recently published in this journal. They must not cite unpublished work or data. Letters will be published at the discretion of the Editor-in-Chief. Authors of accepted letters see page proofs before publication. Only changes to correct inadvertent/introduced grammar and/or spelling inaccuracies are permitted. Regular publication charges apply. No figures or tables are allowed.
- **Letters to the Editor Responses** reply to a Letter to the Editor at no greater length than the original letter. Authors whose work is discussed in a Letter to the Editor will typically be invited to provide a response. If accepted, authors will see page proofs before publication. Only changes to correct inadvertent/introduced grammar and/or spelling inaccuracies are permitted. No figures or tables are allowed.

ENDOCRINE SOCIETY STATEMENTS

- **Clinical Practice Guidelines** are developed by an Endocrine Society appointed task force, are evidence based, and provide graded clinical practice recommendations. These are developed with input from Society committees and members.
- **Clinical Practice Guideline Meta-analyses** are commissioned by the Endocrine Society to provide statistical analyses of its Clinical Practice Guidelines.
- **Guideline Communications** are derivatives of the Society’s Clinical Practice Guidelines that supplement or comment on developments in the disease area since the time of publication of a Guideline.
- **Policy Perspectives** are based on established Society policy positions and developed by the Advocacy & Public Outreach Core Committee with input from the membership.
- **Research Guides** are developed by an expert writing group with input from Society committees and membership.
- **Scientific Statements** are developed by a writing group under the direction of an Endocrine Society appointed Chair with the objective of synthesizing research and identifying gaps in the scientific literature. These are developed with input from Society committees and members.
- **Consensus Statements** provide a comprehensive examination by an expert panel of a scientific or medical issue which may include ungraded recommendations. Submitted by Endocrine Society work groups, other professional society work groups, task forces, and other consortia which involve the Endocrine Society.

Use of Peer Review: All submissions are subject to external peer review as directed by the journal editors, other than Endocrine Society Statements, which are reviewed by the Endocrine Society and selected outside experts.
THE ENDOCRINE SOCIETY IS THRILLED TO ANNOUNCE AND CONGRATULATE THE

2019 LAUREATE AWARDS WINNERS

FRED CONRAD KOCH LIFETIME ACHIEVEMENT AWARD
Edward M. Brown, MD

GERALD D. AURBACH AWARD FOR OUTSTANDING TRANSLATIONAL RESEARCH
Helen H. Hobbs, MD

INTERNATIONAL EXCELLENCE IN ENDOCRINOLOGY AWARD
Ana Claudia Latronico, MD, PhD

OUTSTANDING CLINICAL INVESTIGATOR AWARD
Wiebke Arlt, MD, DSc, FRCP, FMedSci

OUTSTANDING CLINICAL PRACTITIONER AWARD
James W. Findling, MD

OUTSTANDING EDUCATOR AWARD
Kenneth D. Burman, MD

OUTSTANDING INNOVATION AWARD
John J. Kopchick, PhD

OUTSTANDING LEADERSHIP IN ENDOCRINOLOGY AWARD
William F. Young, Jr., MD, MSc

OUTSTANDING MENTOR AWARD
Dolores J. Lamb, PhD, HCLD (ABB)

OUTSTANDING SCHOLARLY PHYSICIAN AWARD
Ian D. Hay, MD, PhD

RICHARD E. WEITZMAN OUTSTANDING EARLY CAREER INVESTIGATOR AWARD
Patrick Seale, PhD

ROY O. GREEP AWARD FOR OUTSTANDING RESEARCH
Cheryl Lyn Walker, PhD

SIDNEY H. INGBAR AWARD FOR DISTINGUISHED SERVICE
Carole R. Mendelson, PhD

WITHDRAWN: Glucose-Dependent Insulinotropic Polypeptide Increases Blood Flow in Adipose Tissue of Humans by Recruiting Capillaries

Meena Asmar, Ali Asmar, Lene Simonsen, Jens Juul Holst, and Jens Bülow

The above-named article by Asmar M, Asmar A, Simonsen L, Holst JJ, and Bülow J (J Clin Endocrinol Metab. [published online ahead of print 9 May 2018]; doi: 10.1210/jc.2018-00389) has been withdrawn by the authors.

The authors report, “We have discovered that we have not mentioned that the plasma insulin, plasma lipid concentrations and the lipid fluxes have been published previously, using the same individuals. The plasma lipid concentrations and the lipid fluxes were required by the second reviewer and were included in the edited version, but we unfortunately forgot to write in the edited version that these data were published previously. We discovered some minor, unintended errors in the analyses of the GIP concentrations in the control experiments.”
