INVITED REVIEW
The definition of sexual selection
David M. Shuker and Charlotte Kvarnemo

EDITOR’S CHOICE
Smart mating: the cognitive ability of females influences their preference for male cognitive ability
Nayade Alvarez-Quintero, Alberto Velando, and Sin-Yeon Kim

COVER IMAGE
An adult female humpback whale and her calf fluke slap in close proximity. Acoustic communication is essential for these pairs to maintain contact with each other but may be overheard by nearby animals. The work of Indeck et al. suggests that these pairs combine ‘whispered’ calling with social distancing to balance intra-pair communication with male avoidance.
