Estrogen-independent actions of environmentally relevant AhR-agonists in human endometrial epithelial cells

Cornelia Willing, Marco Peich, Adrian Danescu, Astrid Kehlen, Paul A. Fowler, and Sabine Hombach-Klonisch

Published DNA profiling data has identified the hTERT-EEC cells as misidentified MCF7 breast cancer cells (Korch et al., Gynecol Oncol. 2012, Oct;127(1):241-8). We cannot exclude that the cells used in this paper are a MCF7 contamination and therefore advise caution in the interpretation of the reported data.
