Anaemia in haemodialysis patients of five European countries: association with morbidity and mortality in the Dialysis Outcomes and Practice Patterns Study (DOPPS)

The correct value in Table 5 (last row) for a prescribed weekly single dose of rHuEpo delivered by an intravenous route for Euro-DOPPS countries overall (France, Germany, Italy, Spain, and the United Kingdom) should have been 10% and not 20%. The authors would like to apologize for this error.
