DOI: 10.1093/ndt/gfh410

Plasma and urinary free 3-nitrotyrosine following cardiac angiography procedures with non-ionic radiocontrast media

Enrico Fiaccadori, Umberto Maggiore, Carlo Rotelli, Roberto Giacosa, Maria Lombardi, Sibilla Sagripanti, Silvia Buratti, Diego Ardissino and Aderville Cabassi

In Figure 1 the unit of measure stated in the Y axis for urinary 3-NT to creatinine ratio should be nM/mg10-1 (nanomoles) and not microM/mg 10-1 as reported and for urinary 3-NT should be nM/L (nanomoles/L) and not microM/L as reported. The authors would like to apologize for this error.
