Increased serum advanced glycation end products are associated with impairment in HDL antioxidative capacity in diabetic nephropathy

Huali Zhou, Kathryn CB Tan, Sammy WM Shiu and Ying Wong

Department of Medicine, University of Hong Kong, Pokfulam Road, Hong Kong

The date on the top of the article was incorrect; it read 2007 and should read 2008. The publisher would like to apologize for this error.

doi: 10.1093/ndt/gfn219

The outcome of chronic dialysis in infants and toddlers—advantages and drawbacks of haemodialysis

Sofia Feinstein, Choni Rinat, Rachel Becker-Cohen, Efrat Ben-Shalom, Shepard B. Schwartz and Yaacov Frishberg

Division of Pediatric Nephrology, Shaare Zedek Medical Center and the Hadassah-Hebrew University School of Medicine, Jerusalem, Israel

In the abstract, the third sentence in Results section should read: One-, three-, five- and eight-year patient survival was 96%, 88%, 84% and 84% respectively.

The publisher would like to apologize for this error.
