The aims of the Journal of Economic Geography are to stimulate research and discussion on topics at the intersection of economics and geography, and to provide a forum for debate on all aspects of "economic geography" broadly defined. The Journal is steered by an editorial team and editorial board drawn equally from economics and geography.

Instructions to Authors
1. The Journal of Economic Geography seeks to rekindle and reinvigorate the links between the disciplines of economics and geography. It aims to publish original academic research, critical surveys, and discussion of the historical literature standard in the field of "economic geography" broadly defined. Submitted papers will be evaluated on the basis of their creativity, quality of scholarship, and contribution to advancing understanding of the geographic nature of economic systems and global economic change.

2. Submitted manuscripts must be original, unpublished contributions. They must not be concurrently on offer to any other publication. Authors submitting a manuscript do so on the understanding that if it is accepted for publication copyright of the article will be assigned to Oxford University Press. The Press will supply online access to the article to the author(s) of free charge. The Editors’ decision is final.

3. Manuscripts must be submitted online via http://mc.manuscriptcentral.com/jeg. Manuscripts should not be more than 8000 words and should be written in English. They should be prefaced by a short abstract of no more than 100 words, followed by four keywords, which are suitable for indexing and classification purposes. Manuscripts will not normally be returned to authors.

4. The Journal uses a blind refereeing system. Hence the name and affiliation of the author(s) should appear only on the title page. In the case of multiple authors, the submission should nominate one author as the point of contact for the Editors and provide full details (including email and fax) of an address for correspondence.

5. Revised and accepted manuscripts must be submitted in electronic form. The style of the Journal (see a recent issue) is one on side only of A4 or US letter-size paper, double spaced (including footnotes and references), with a wide margin, and with the pages numbered. Avoid excessive use of footnotes. Tables and figures should each be numbered consecutively throughout the manuscript. Figures should each be attached on separate sheets at the end of the manuscript, should be on high quality scanning suitable for indexing and classification purposes. Manuscripts will not normally be returned to authors.

6. Authors are asked to keep in mind that the Journal is cross-disciplinary and that the mathematical training of its readers is varied. On this basis, attempting to express a mathematical argument exclusively in words is counterproductive. On the other, through good exposition (eg, using lemmas for intermediate technical results, separating proofs from explanation, putting routine proofs and algebra in technical appendices) it should always be possible to make the central results and most argument intelligible.

7. Diagrams should be submitted in their final form, both as good quality hard copy and on disk.

8. Final versions of papers accepted for publishing should be submitted as a typescript (two copies) and electronically in a format suitable for editing. Details of the software used to produce the disk should be given. Authors are expected to correct proofs quickly and to make no revision to proofs. The Press reserves the right to charge authors for revisions made to proofs.

9. The Journal of Economic Geography also reviews selected books in the field of 'economic geography'. Interested authors should contact the Journal to be included in the list of books for review. The Journal should be sent to the Book Review Editor listed in the title of the issue, or to Oxford University Press marked for review by the Journal of Economic Geography.
