This quarterly publication has been established under the auspices of the Society for Health and Human Values to explore the shared themes and concerns of philosophy and the medical sciences. Central issues in medical research and practice have important philosophical dimensions, for in treating disease and promoting health, medicine involves presuppositions about human goals and values. Conversely, the concerns of philosophy often significantly relate to those of medicine, as philosophers seek to apprehend the nature of knowledge and the human condition in the modern world. In addition, recent developments in medical technology and treatment raise ethical problems that overlap with philosophical interests. The Journal of Medicine and Philosophy aims to provide an ongoing forum for the discussion of these themes and issues.

Unsolicited manuscripts are considered for publication for future thematic issues. Prospective authors should contact issue editors for further information. Closing dates for receipt of manuscripts are indicated in parentheses.

In addition to issues of the Journal centered on selected themes, the editorial policy also provides for the publication of nonthematic issues. While a certain number of papers are invited for thematic issues, unsolicited papers may be addressed to the preannounced topic of a specific issue or to any significant topic in the relationships of medicine and philosophy. Especially suitable for nonthematic issues would be commentaries, critiques, and responses to previously published papers. In this way the Editorial Board hopes to establish an active forum for a continuing dialogue on fundamental philosophico-medical questions to which any scholar may contribute. Unsolicited papers should be sent to:

Managing Editor, JMP,
Center for Ethics, Medicine, and Public Issues,
Baylor College of Medicine,
One Baylor Plaza,
Houston, TX 77030, U.S.A.

The Editorial Board acknowledges with gratitude a grant from the Upjohn Company that makes possible the publication of the Journal.
