NO MATTER WHAT YOUR GIS APPLICATION, TRIMBLE HAS A GPS MAPPING SYSTEM FOR YOU

Introducing Pro XR - Now You Can
Relocate Features with Submeter Accuracy

Trimble offers the broadest and most versatile choice of GPS mapping systems for GIS data collection. Whether it's telephone poles or sugar pines, fire damaged buildings or underground gas lines—there's a Trimble system that will get the job done.

The GeoExplorer™ II system is a pocket-sized GPS/GIS data collection system that's easy on your budget. Now, Pathfinder Office software is standard and you have the option of an external antenna.

The GPS Pathfinder™ Pro XR expands the use of GPS/GIS data collection. With the Pro XR you can both map and relocate features with submeter accuracy—using integrated real time differential correction capabilities. The Pathfinder Pro XR provides you with a robust, accurate, easy to use tool to not only collect data for your GIS but also use the data from your GIS.

Direct GPS™ for ArcView® is a software/GPS receiver combination that enables you to collect GPS-tagged data within ESRI®'s ArcView software.

Pathfinder Office™ software is the next generation of Trimble's GPS planning and data processing software. The software is Microsoft Windows® based and provides you with all the tools to complete your projects—from GPS planning to GIS export—quickly and easily.

The Community Base Station™ system is a 12-channel, automated GPS reference station. It provides data to unlimited GPS rovers for differential correction.

1997 Editorial Calendar

**January**  Forestry Forum
An open discussion of forestry issues.*

**February**  International Perspectives
How environmental conditions, cultural practices, and economics guide forest practices around the world.

**March**  Tree Improvement
Recent developments and future trends in silviculture, biotechnology, and soil science.

**April**  Landscape-Level Management
Ecosystem and adaptive management programs: how and why they're working (or not).

**May**  Forestry Forum
An open discussion of forestry issues.*

**June**  Measurement and Mapping
Advances in and practical applications of GIS, GPS, and high-tech measuring devices; plus our second annual Buyers Guide.

**July**  The Law and the Forest
An investigation of public land laws and their effect on forests and forest practice.

**August**  Water Quality, Wildlife, and the Forest
Forestry practices that enhance fish and wildlife habitat.

**September**  Forestry Forum
An open discussion of forestry issues.*

**October**  Where the Forest Meets the City
Potential opportunities, conflicts, and hazards of the urban/wildland interface.

**November**  Forestry on Tribal Lands
Forest management, education, and philosophy from a Native American perspective.

**December**  Threats to the Forest
Foresters address potential threats to the forest environment—such as fire, disease, exotic species, global warming, and overpopulation.

*Because not all articles submitted fall into the topics designated, three issues have been set aside in which we will publish articles pertinent to other discussions and developments in forestry.
