ACKNOWLEDGMENTS

In a paper such as this, the most important contributors have been the collectors of fossils. In the descriptions and locality lists I have attempted to list these people. The Gayle Scott collection should be mentioned especially, since there are many fine fossils in this collection at Texas Christian University; many of these fossils were collected by Wm. T. O'Gara. Scott had written a manuscript on these fossils, which I have not seen. However, the fossils were labeled with his names, and his taxonomy has no doubt influenced me. I have had many discussions about these fossils with W. S. Adkins, and we exchanged keys on classification of different Brancoceratidae. Adkins' influence is also apparent in this work, at least to myself.

Ralph W. Imlay, N. F. Sohl, and Erle G. Kauffman, all at the U. S. National Museum, were especially cooperative during my stay at the Museum, for which I am duly grateful. Bob F. Perkins, F. E. Lozo, and C. H. Moore have read and criticized all or parts of the manuscript. Many alterations, additions, and deletions have resulted from their interest and enthusiasm; I am certainly appreciative. Dr. Vernon L. Ryan helped with some of the photography. Part of the work was financed by grants from the University of Texas Research Institute, and much of the time spent in the research was financed by grants from the Geology Foundation, the University of Texas.
