## ACKNOWLEDGMENTS

The authors wish to record their great indebtedness to the following institutions, whose help made it possible to publish this book:

The Stiftung zur Förderung der wissenschaftlichen Forschung an der Bernischen Hochschule and the Stiftung Dr. Joachim de Giacomo der Schweizerischen Naturforschenden Gesellschaft, who supported the compilation of Part I;

The Hercules Powder Company, where the collection of data for Part II was begun;

The Geological Society of America, who gave a grant-in-aid to complete the work and bore the expenses of publication.

Part I could not have been finished in 1950 without the valuable aid of Dr. R. Scheidegger, then a graduate student at the University of Berne, whose collaboration is thankfully acknowledged. Messrs. G. F. Bonsma, H. Jaggi, K. Müller, and H. Zschaler, graduate students at the University of Berne, helped in correcting the manuscript and in proofreading.

The following technical assistance, received in the preparation of Part II, is also gratefully acknowledged. During the period 1943–1945 Miss M. C. Foster, Mrs. Mary Everhart, and Mrs. Levi, at the Hercules Experiment Station, helped J. D. H. Donnay start the collection of data. Messrs. G. Klein and Frank Chesney, then students at the Massachusetts Institute of Technology, collected the data in volumes II and III of *Strukturbericht*. By 1945 volumes I to VII of *Strukturbericht* had been combed for data, as had volumes 31 to 37 of *Chemical Abstracts*. At that time Miss Mildred Graffin, of the Hercules Research Department, checked the chemical terminology and provided a great many missing names. Messrs. L. E. Andrews and R. P. Nickelsen, then students at The Johns Hopkins University, helped assemble the data for the years 1940 to 1951. Odd references were checked by Mr. Nickelsen, who also performed numerous calculations, particularly the transformation of units ( $kX$  to  $\text{Å}$ ) for cubic substances. Mr. Enrico Federighi carried out the Delaunay reduction for all the triclinic substances and helped in many other ways. Mrs. Duane Barney proofread the hexagonal system and recast all the organic formulae in the condensed form used in the formula index. The Department of Geology of The Johns Hopkins University provided the expert clerical assistance of Miss Gertrude Steffe. Mrs. Mary B. Rowe painstakingly prepared the whole typescript, on which she and Mr. Philip Choquette patiently entered innumerable corrections. Mrs. Rowe also sorted the data cards twice, once for each index.
