THE information given here is provided by the IMA Commission on New Minerals, Nomenclature and Classification for comparative purposes and as a service to mineralogists working on new species.

Each mineral is described in the following format:

Mineral name, if the authors agree on its release prior to the full description appearing in press

Chemical formula

Type locality

Full authorship of proposal

E-mail address of corresponding author

Relationship to other minerals

Crystal system, Space group; Structure determined, yes or no

Unit-cell parameters

Strongest lines in the powder X-ray diffraction pattern

Type specimen repository and specimen number

Citation details for the mineral prior to publication of full description

Citation details concern the fact that this information will be published in the *Mineralogical Magazine* on a routine basis, as well as being added month by month to the Commission's web site.

It is still a requirement for the authors to publish a full description of the new mineral.

NO OTHER INFORMATION WILL BE RELEASED BY THE COMMISSION

REVISED CHEMICAL FORMULAE

Hellandite-(Ce) and hellandite-(Y)

In the IMA List of Minerals the chemical formulae of hellandite-(Ce) and hellandite-(Y) were inconsistent with those given in the IMA-approved report on hellandites [*Am. Mineral.*, **87** (2002), 745–752].

In both formulae the occupancy at the *T* sites was given as $(Be, Li)_{2-x}$, however the value of x was not specified. Actually it is always $x > 1$, therefore the *T* site is vacant in the ideal formulae of hellandite-(Ce) and hellandite-(Y). Now both formulae have been modified accordingly: $(Ca, REE)_4Ce_2Al\Box_2(B_4Si_4O_{22})(OH)_2$ and $(Ca, REE)_4Y_2Al\Box_2(B_4Si_4O_{22})(OH)_2$, respectively.
