Welcome to Our New Journal: *Journal of the Pediatric Infectious Diseases Society*

Theoklis E. Zaoutis,1,2 MD, MSCE

1Department of Pediatrics and Epidemiology, Perelman School of Medicine at the University of Pennsylvania, Philadelphia, and
2Division of Infectious Diseases, The Children’s Hospital of Philadelphia, Pennsylvania

Welcome to the first issue of the *Journal of the Pediatric Infectious Diseases Society* (JPIDS). This new journal, the official journal of the Pediatric Infectious Diseases Society (PIDS), will be dedicated to publishing manuscripts on perinatal, childhood, and adolescent infectious diseases. JPIDS will be a high-quality source of original research articles, clinical trial reports, guidelines, and topical reviews on topics ranging from bench to bedside, with particular attention to the interests and needs of the pediatric infectious diseases community. Our goal is that JPIDS represent the spectrum of scientific and clinical work engaging pediatric infectious diseases physicians and scientists today, as well as areas of future growth in the field.

JPIDS will be published quarterly, in online and print formats, by Oxford University Press (OUP), the same publisher as used by the Infectious Diseases Society of America (IDSA), and as such will have an informal relationship with *The Journal of Infectious Diseases* (JID) and *Clinical Infectious Diseases* (CID), a partnership that positions JPIDS toward becoming a lead journal among our peer publications. All members of PIDS will receive complimentary online and print subscriptions to JPIDS as part of their membership. Additionally, institutional subscribers may purchase JPIDS with the IDSA journals, CID and JID, which are also published by OUP.

JPIDS joins more than 250 journal titles published by OUP, which, as a department of the University of Oxford, traces its publishing origins back to 1586 and the earliest days of printing. Today OUP is the world’s largest university press and is at the forefront of publishing technology. Authors and readers can look forward to an expeditious online and print publication, a robust journal website with features and tools to assist in article discovery, and a commitment to outstanding service.

We recognize that PIDS as a society owes a great deal to the editors of the *Pediatric Infectious Disease Journal*, George McCracken and John Nelson, and gratefully acknowledge their tremendous contributions made to PIDS over many years. The decision to launch the new journal was made to ensure the long-term stability and maturation of PIDS.

In this inaugural issue, we present articles that span from bench to bedside and cover a broad range of topics relevant to pediatric infectious diseases including vaccines, parasitic infections, bacterial infections, viral infections and healthcare-acquired infections. We present a timely major review article on the epidemiology of infant meningococcal disease. In addition, from the IDSA Annual Meeting, we present the pediatric infectious disease literature review and cases from the Pediatric Fellows’ Day Workshop. Finally, we introduce the Pediatric ID Consultant, a feature focused on common questions and issues related to the everyday practice of pediatric infectious diseases.

Before moving forward to the excellent scientific and clinical content contained in this first issue, we present a special article on the history of PIDS coauthored by 2 of the founders and legends in our field, Stanley Plotkin and Caroline Breese Hall.

The Editorial Board of JPIDS includes many national and international leaders in the field of pediatric infectious diseases. On a personal note, I am honored, humbled, and thrilled to serve as the first Editor-in-Chief of this new journal and invite you to join me in making JPIDS an invaluable and excellent resource for our field. Along with the editorial board and...
the Associate Editors, we have relished the challenge of developing this new journal, and we anticipate that the journal will evolve continuously and respond rapidly to the changing needs of our field and, most importantly, our readers.

From the President of the Pediatric Infectious Diseases Society

Dear Members:
This first issue of our society’s journal, the *Journal of the Pediatric Infectious Diseases Society* (JPIDS), represents an important step in our society’s journey. We acknowledge the support of our members and past leaders, as well as Oxford University Press and the leadership of the Infectious Diseases Society of America, who have worked with us diligently over the past year in this effort. This journal represents one step in our effort to make our society self-sustaining and even more visible as the scientific and medical authority in the prevention and care of pediatric infectious diseases in children, and the leaders across the global scientific and public health spectrum in this field. In the next issue we will showcase the other exciting initiatives that PIDS will undertake to further cement our leadership position in the field.

JPIDS draws on the legacy of many members of our society, who remain an inspiration to us. We acknowledge the importance of teaching, excellence in research, and the need to publish our research, and believe that publication of our studies will ultimately benefit the health of children worldwide.

We welcome the input of our members who have contributed manuscripts, time and effort in reviewing and editing manuscripts, and the many suggestions we have received for content, subjects, and formatting. The work of the society with the Editor and Editorial Staff of this journal has been an impressive collaborative effort, and this first issue is a tribute to this effort. Our goal is to make our journal one that continues to represent the interests and the work of our members.

Janet Englund
President, PIDS
Professor of Pediatrics
University of Washington/Seattle Children’s Hospital
