</table>

Please note: US$ rate applies to US and Canada, Euros applies to Europe, UK£ applies to UK and Rest of World.

Online access was made completely free of charge from 2005. An institutional membership provides discounted publication charges for corresponding authors based at the member institution. The print subscription does not entitle authors to discounted publication charges. See https://academic.oup.com/nar/pages/Open_Access_Initiative. There may be other subscription rates available, for a complete listing please visit https://academic.oup.com/nar/subscribe.

Full prepayment, in the correct currency, is required for all orders. Orders are regarded as firm and payments are not refundable. Subscriptions are accepted and entered on a complete volume basis. Claims cannot be considered more than FOUR months after publication or date of order, whichever is later. All subscriptions in Canada are subject to GST. Subscriptions in the EU may be subject to European VAT. If registered, please supply details to avoid unnecessary charges. For subscriptions that include online versions, a proportion of the subscription price may be subject to UK VAT. Personal rate subscriptions are only available if payment is made by personal cheque or credit card and delivery is to a private address.

The current year and two previous years’ issues are available from Oxford University Press. Previous volumes can be obtained from the Periodicals Service Company, 11 Main Street, Germantown, NY 12526, USA. Email: psc@periodicals.com. Tel: +1 (518) 537 4700. Fax: +1 (518) 537 5899. Printed by Bell & Bain, Glasgow, UK.

*Cover*: The three contradictory, but evidenced results of 55-years long PARP1 research. A single PARP1 molecule modifies itself (1) by protein-distal addition of ADP-ribose monomers (2). Resulting PAR molecules attached to the enzyme adopt a highly branched ([star] shape and may reach more than 200 residues in size and up to 100 nm in length (3). Whether these facts are really mutually exclusive or just seem to be so, as if they were located on the ([opposite sides] of a Moebius band, is discussed in the review by Alemasova, E. and Lavrik, O. in this issue.

For more information see the article by Alemasova, E.E. et al., pages 3811-3827, in this issue.
